

Hitachi Data Ingestor

6.4.2

Error Codes

This guide provides a list of error messages, message descriptions, and solutions for Hitachi Data Ingestor (HDI).

Preface

This manual describes the messages for Hitachi Data Ingestor (HDI):

This preface includes the following information:

- [Intended audience](#)
- [Product version](#)
- [Release notes](#)
- [Organization of HDI manuals](#)
- [Abbreviation conventions](#)
- [Document conventions](#)
- [Convention for storage capacity values](#)
- [Accessing product documentation](#)
- [Getting help](#)
- [Comments](#)

Intended audience

This manual is intended for the following users:

- System administrators who operate and manage an HDI system.
- End users of an HDI system.

In addition, the user must have:

- A basic knowledge of storage system
- A basic knowledge of Hitachi Content Platform (HCP) systems
- A basic knowledge of networks
- A basic knowledge of file sharing services
- A basic knowledge of SAN
- A basic knowledge of CIFS
- A basic knowledge of NFS
- A basic knowledge of UNIX
- A basic knowledge of Windows
- A basic knowledge of Web browsers

Product version

This document revision applies to Hitachi Data Ingestor version 4.2.1 or later.

Release notes

Read the release notes before installing and using this product. They may contain requirements or restrictions that are not fully described in this document or updates or corrections to this document. Release notes are available on Hitachi Vantara Support Connect: <https://knowledge.hitachivantara.com/Documents>.

Organization of HDI manuals

HDI manuals are organized as shown below:

Note that whether HDI nodes can be set up in a redundant configuration depends on the HDI model. A configuration where nodes are made redundant is called a cluster configuration, and a configuration where a node is not made redundant with another node is called a single-node configuration. Which manuals you need to read depends on which configuration you are going to use.

Manual name	Description
<i>Hitachi Data Ingestor Installation and Configuration Guide, MK-90HDICOM002</i>	You must read this manual first to use an HDI system. This manual contains the information that you must be aware of before starting HDI system operation, as well as the environment settings for an external server.
<i>Hitachi Data Ingestor Cluster Getting Started Guide, MK-90HDICOM001</i>	This manual explains how to set up an HDI system in a cluster configuration.
<i>Hitachi Data Ingestor Cluster Administrator's Guide, MK-90HDI038</i>	This manual provides procedures for using HDI systems in a cluster configuration, as well as provides GUI references.
<i>Hitachi Data Ingestor Cluster Troubleshooting Guide, MK-90HDI029</i>	This manual provides troubleshooting information for HDI systems in a cluster configuration.
<i>Hitachi Data Ingestor Single Node Getting Started Guide, MK-90HDI028</i>	This manual explains how to set up an HDI system in a single-node configuration.
<i>Hitachi Data Ingestor Single Node Administrator's Guide, MK-90HDI039</i>	This manual explains the procedures for using HDI systems in a single-node configuration, as well as provides GUI references.
<i>Hitachi Data Ingestor Single Node Troubleshooting Guide, MK-90HDI030</i>	This manual provides troubleshooting information for HDI systems in a single-node configuration.
<i>Hitachi Data Ingestor CLI Administrator's Guide, MK-90HDI034</i>	This manual describes the syntax of the commands that can be used for HDI systems in a cluster configuration or a single-node configuration.
<i>Hitachi Data Ingestor API References, MK-90HDI026</i>	This manual explains how to use the API for HDI systems in a cluster configuration or a single-node configuration.
<i>Hitachi Data Ingestor Error Codes (This manual)</i>	This manual contains messages for HDI systems in a cluster configuration or a single-node configuration.
<i>Hitachi Data Ingestor File System Protocols (CIFS/NFS) Administrator's Guide, MK-90HDI035</i>	This manual contains the things to keep in mind before using the CIFS or NFS service of an HDI system in a cluster configuration or a single-node configuration from a CIFS or NFS client.

Abbreviation conventions

This manual uses the following abbreviations for product names:

Abbreviation	Full name or meaning
Active Directory	Active Directory(R)
Device Manager	Hitachi Device Manager Software

Abbreviation	Full name or meaning
File Services Manager	A generic name for the following: <ul style="list-style-type: none"> • Configuration Manager • Hitachi File Services Manager
HCP	Hitachi Content Platform
HDI	Hitachi Data Ingestor
Internet Explorer	Windows(R) Internet Explorer(R)
Windows	Microsoft(R) Windows(R) Operating System

If you want to reference other manuals, note that hereinafter in this manual, the *Hitachi Data Ingestor Cluster Administrator's Guide* and *Hitachi Data Ingestor Single Node Administrator's Guide* are referred to as the *Administrator's Guide*, and the *Hitachi Data Ingestor Cluster Troubleshooting Guide* and the *Hitachi Data Ingestor Single Node Troubleshooting Guide* are referred to as the *Troubleshooting Guide*. See the appropriate manual as needed.

Document conventions

This document uses the following typographic conventions:

Convention	Description
Bold	Indicates text on a window, other than the window title, including menus, menu options, buttons, fields, and labels. Example: Click OK .
<i>Italic</i>	Indicates a variable, which is a placeholder for actual text provided by the user or system. Example: <i>copy source-file target-file</i> <i>Note:</i> Angled brackets (< >) are also used to indicate variables.
screen/code	Indicates text that is displayed on screen or entered by the user. Example: # <code>pairdisplay -g oradb</code>
< > angled brackets	Indicates a variable, which is a placeholder for actual text provided by the user or system. Example: # <code>pairdisplay -g <group></code> <i>Note:</i> Italic font is also used to indicate variables.
[] square brackets	Only displayed in certain cases. Example: [Virtual Server ID = <i>virtual-server-ID</i> :] This example shows that Virtual Server ID = <i>virtual-server-ID</i> : is displayed only for virtual servers. For the command format, indicates optional values. Example: [a b] indicates that you can choose a, b, or nothing.

Convention	Description
{... ...}	In message explanations, curly brackets containing items separated by vertical bars indicate that the system will output only one of the items. For example, {A B C} means that the system will output the string A, or B, or C. For the command format, Indicates that you have a choice between two or more options or arguments. Examples: [a b] indicates that you can choose a, b, or nothing. { a b } indicates that you must choose either a or b.
...	The item or items preceding the ellipsis (. . .) can be repeated. To specify multiple items, use a comma (,) to delimit them. Example: A,B . . . indicates that B can be specified as many times as necessary after A.

Convention for storage capacity values

Storage capacity values (e.g., drive capacity) are calculated based on the following values:

Capacity Unit	Physical Value	Logical Value
1 KB	1,000 bytes	1,024 (2 ¹⁰) bytes
1 MB	1,000 KB or 1,000 ² bytes	1,024 KB or 1,024 ² bytes
1 GB	1,000 MB or 1,000 ³ bytes	1,024 MB or 1,024 ³ bytes
1 TB	1,000 GB or 1,000 ⁴ bytes	1,024 GB or 1,024 ⁴ bytes
1 PB	1,000 TB or 1,000 ⁵ bytes	1,024 TB or 1,024 ⁵ bytes
1 EB	1,000 PB or 1,000 ⁶ bytes	1,024 PB or 1,024 ⁶ bytes
1 block	-	512 bytes

Accessing product documentation

Product user documentation is available on Hitachi Vantara Support Connect: <https://knowledge.hitachivantara.com/Documents>. Check this site for the most current documentation, including important updates that may have been made after the release of the product.

Getting help

[Hitachi Vantara Support Connect](https://support.hitachivantara.com/en_us/contact-us.html) is the destination for technical support of products and solutions sold by Hitachi Vantara. To contact technical support, log on to Hitachi Vantara Support Connect for contact information: https://support.hitachivantara.com/en_us/contact-us.html.

[Hitachi Vantara Community](https://community.hitachivantara.com) is a global online community for Hitachi Vantara customers, partners, independent software vendors, employees, and prospects. It is the destination to get answers, discover insights, and make connections. **Join the conversation today!** Go to community.hitachivantara.com, register, and complete your profile.

Comments

Please send us your comments on this document to doc.comments@hitachivantara.com. Include the document title and number, including the revision level (for example, -07), and refer to specific sections and paragraphs whenever possible. All comments become the property of Hitachi Vantara Corporation.

Thank you!

Overview of Messages

This chapter provides the description format of and notes for messages output by Hitachi Data Ingestor (HDI) systems, as well as descriptions of messages sent by using SNMP traps or emails.

- [Message description format](#)
- [Messages sent by using SNMP traps or emails](#)

Message description format

This section describes the messages output by HDI systems. Search for the message in the manual that corresponds to the message ID of the output message, and then check the cause and action for the error. To help differentiate between system operations and user actions, the labels (S) for system and (O) for operator are sometimes used.

HDI system messages that do not appear in this manual are trace information for use by maintenance personnel. The system administrator need not perform the action outlined in the trace information.

The following explains how to read the messages in this manual, and gives some cautionary notes.

Message ID

The message ID is a unique ID assigned to each message. Symbols used in the message IDs are as follows:

KA

Indicates that the message was output by an HDI system.

xx

Indicates the identifier of a program that output the message. The identifiers are as follows:

QB: Backup Restore

QG: File Sharing

QK, *QM*: File Services Manager

QS: File snapshots

QV: Anti-Virus Enabler

Other than the above messages, messages beginning with *KAPL* might be displayed, but there is no need to reference them.

nnnnn

The message sequence number. Message numbers are five-digit numbers attached to each message, such as 00001 or 00002.

y

Indicates the message severity level. Possible severity levels are as follows:

E (Error): Indicates an error message.

Processing is canceled.

W (Warning): Indicates a warning message.

Processing continues after message output.

I (Information): Indicates an information message.

Reports information to the user.

Q (Question): Indicates a question message.

Prompts the user to respond.

Variable in message

Variables in the message are indicated in italics as follows:

variable-such-as-user-name

Notes on the terms used in messages

When you see any of the following terms in a message, interpret the message by substituting the term with the term for the corresponding function supported by the HDI system as follows.

Table 1-1 Substitute of the terms used in messages

Terminology in messages	Substitute with
Differential-data storage device	Work space
File snapshot functionality	Active File Migration functionality
HBase Storage Mgmt Common Service	HBase 64 Storage Mgmt Common Service
HBase Storage Mgmt Web Service	HBase 64 Storage Mgmt Web Service
hcmdsgetlogs	hcmds64getlogs
hcmdssrv	hcmds64srv
HiRDB/EmbeddedEdition _HD0	HiRDB/EmbeddedEdition _HD1
httpsd.conf	user_httpsd.conf

In addition, ignore descriptions about differential-data snapshots, because the differential-data snapshot function is used internally by the system.

Notes on taking actions

The action to take when instructed to "Acquire the *error-information* and inform maintenance personnel." is as follows:

- Download the data in all the log groups as *error-information*, regardless of the log file type indicated.
If a cluster configuration is used, download the data in all the log groups for both nodes.
- Contact maintenance personnel, and then send all the acquired log group data.

For details on how to download all log group data, see the *Administrator's Guide*.

If the message prompts you to see online Help, click **Help** in the File Services Manager or HDI GUI, and see the displayed manual.

Messages sent by using SNMP traps or emails

When SNMP has been set up, some of the system messages output by HDI systems can be sent by using SNMP traps or emails. For details on how to monitor the system by using SNMP traps or emails, see the *Administrator's Guide*.

Messages sent from Backup Restore (KAQB messages)

The following table lists the messages sent from Backup Restore.

Table 1-2 List of messages sent from Backup Restore

Message ID	Severity level	Corresponding MIB object	Available notification methods	See
KAQB12231-W	Warning	stdEventTrapWarning	SNMP and E-mail	Table 2-1 KAQB messages on page 2-2
KAQB12233-E	Error	stdEventTrapError	SNMP and E-mail	
KAQB12234-E	Error	stdEventTrapError	SNMP and E-mail	
KAQB14225-E	Error	stdEventTrapError	SNMP and E-mail	

Legend: SNMP: Notification by an SNMP trap, E-mail: Email notification

Messages sent from File Sharing (KAQG messages)

The following table lists the messages sent from File Sharing.

Table 1-3 List of messages sent from File Sharing

Message ID	Severity level	Corresponding MIB object	Available notification methods	See
KAQG01012-I	Information	stdEventTrapInformation	SNMP	Table 3-1 KAQG messages on page 3-2

Legend: SNMP: Notification by an SNMP trap, E-mail: Email notification

#1:

This message is sent to the SNMP manager when the **Notify** radio button in the **Notification when infection is detected** group is selected in the Scan Conditions window.

#2:

This message is sent if you specify `EVERYTIME` for the SNMP trap or email notification method by using the `avaconfedit` command.

#3:

This message is sent if you specify `ONCEADAY` for the SNMP trap or email notification method by using the `avaconfedit` command.

KAQB Messages (Backup Restore Messages)

This chapter describes the meanings of the KAQB messages output by HDI systems (Backup Restore messages).

- [KAQB messages](#)

KAQB messages

This section explains messages that have a message ID beginning with KAQB (Backup Restore messages), and the actions to be taken if such messages appear.

Table 2-1 KAQB messages

Message ID	Message	Description and Action
KAQB11004-E	An attempt to allocate memory failed.	Memory could not be allocated, so processing was stopped. (S) Cancels processing. (O) Wait a while, and then re-execute. If the error occurs repeatedly, acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.
KAQB11006-E	No license is set to allow use of basic functionality.	Because the license for Base software is not specified, the Backup Restore function cannot be executed. (S) Cancels processing. (O) Specify the license for Base software, and then retry.
KAQB11008-E	An attempt to get the license of Base software failed.	Other users might be occupying some of the resources used for the processing, or a system error might have occurred. (S) Cancels processing. (O) Wait a while, and then retry. If the error occurs again, acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.
KAQB11009-E	A device error occurred.	A device error occurred in a cluster management LU, user LU, or command device. (S) Cancels processing. (O) Contact maintenance personnel.

Message ID	Message	Description and Action
KAQB11247-E	The NDMP server status could not be acquired, so the NDMP server control window cannot be displayed.	The acquisition of the NDMP server status failed, so the NDMP server control window could not be displayed. (S) Cancels processing. (O) Acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.
KAQB11248-E	The execution environment was changed so the attempt to change the NDMP server password failed.	The execution environment has changed, so the NDMP server password could not be changed. Possible causes of this error include a deleted file or a changed access permission of the executed program. (S) Cancels processing. (O) Acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.
KAQB11249-E	The execution environment was changed so the attempt to execute NDMP server control failed.	Execution of NDMP server control failed because the execution environment was changed. Possible causes of this error include a moved executable file or a changed access permission. (S) Cancels processing. (O) Acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.
KAQB11252-E	An attempt to change the NDMP server password failed.	An error occurred in the update processing of an NDMP server password. (S) Cancels processing. (O) Acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.
KAQB11253-E	An unexpected error occurred.	Processing was terminated because a processing inconsistency occurred during execution of NDMP server control or an NDMP password change.

Message ID	Message	Description and Action
		<p>(S) Cancels processing.</p> <p>(O) Check the contents of the Backup Restore log (<code>ebr_alertfile</code>) that was output just before this message. If the error occurs repeatedly, acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.</p>
KAQB11254-E	The button-specified request is not permitted in the current NDMP server status.	<p>An NDMP server control was used to request a change the NDMP server's operating status, but this request is not permitted. Click 'Refresh' to display the NDMP server's most recent operating status.</p> <p>(S) Cancels processing.</p> <p>(O) Display the NDMP server control window again, check the NDMP server status, and then re-execute.</p>
KAQB11255-E	The specified user name or current password is not registered in the NDMP server.	<p>The specified user name or current password is not registered in the NDMP server.</p> <p>(S) Cancels processing.</p> <p>(O) Re-enter a user name or current password registered in the NDMP server.</p>
KAQB11256-E	An attempt to stop the NDMP server failed.	<p>An error occurred during the processing to stop the NDMP server.</p> <p>(S) Cancels processing.</p> <p>(O) Acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.</p>
KAQB11257-E	An attempt to start the NDMP server failed.	<p>An error occurred during the processing to start the NDMP server.</p> <p>(S) Cancels processing.</p> <p>(O) Acquire the Backup Restore log files, and contact maintenance personnel.</p>

Message ID	Message	Description and Action
		For a list of these log files, see the online help.
KAQB11259-E	An attempt to update the NDMP server status failed.	An error occurred while the NDMP server status was being updated. (S) Cancels processing. (O) If you clicked ' Start ' or ' Restart ', click ' Restart '. If you clicked ' Stop ' or ' Perform Forced Stop ', click ' Perform Forced Stop '. If this error occurs repeatedly, acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.
KAQB11260-E	The acquisition of cluster information has temporarily failed.	Other users might be occupying some of the resources used for the processing, or a system error might have occurred. (S) Cancels processing. (O) Wait a while, and then retry. If the error occurs again, acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.
KAQB11500-I	<i>command-name</i> command execution has started.	The syntax check terminated normally. Command execution starts. (S) None. (O) None.
KAQB11501-I	<i>command-name</i> command has finished.	The command has terminated normally. (S) None. (O) None.
KAQB11502-Q	Enter the value of the displayed parameter name, and then press ' Enter '.	This message appears when you must enter a value for a parameter, such as when changing a password interactively. (S) None. (O)

Message ID	Message	Description and Action
		Specify a value for the parameter.
KAQB11503-E	An option is incorrect.	The type or location of the option is invalid, or the number of options is incorrect. (S) Cancels command execution. (O) Check the format of the command, specify correct options, and then retry.
KAQB11504-E	There are too many or too few parameters.	The number of parameters is invalid. (S) Cancels command execution. (O) Check the format of the command, specify correct parameters, and then retry.
KAQB11505-E	The <i>parameter-name</i> parameter is too short or too long.	The length of the parameter is invalid. (S) Cancels command execution. (O) Check the format of the command, specify a correct parameter value, and then retry.
KAQB11506-E	The value of the <i>parameter-name</i> parameter is incorrect.	The parameter contains an invalid value (a character string or a numeric value). (S) Cancels command execution. (O) Check the format of the command, specify a correct parameter value, and then retry.
KAQB11507-E	The value of the <i>parameter-name</i> parameter is out of range.	The value of the parameter is out of range. (S) Cancels command execution. (O) Check the format of the command, specify a correct parameter value, and then retry.
KAQB11508-E	An attempt to display a message failed.	An error occurred when a response message was output. The response message was displayed incompletely. An error might have occurred while the message was being displayed. (S)

Message ID	Message	Description and Action
		<p>Cancels command execution.</p> <p>(O)</p> <p>Check the contents of the Backup Restore log (<i>ebr_alertfile</i>) that was output just before this message. If the error occurs repeatedly, acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.</p>
KAQB11510-E	An attempt to allocate memory failed.	<p>Sufficient memory could not be allocated during command execution. This caused processing to terminate.</p> <p>(S)</p> <p>Cancels command execution.</p> <p>(O)</p> <p>Wait a while, and then re-execute. If the error occurs again, acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.</p>
KAQB11512-E	An unexpected error occurred.	<p>A processing inconsistency occurred during command execution. This causes processing to terminate.</p> <p>(S)</p> <p>Cancels command execution.</p> <p>(O)</p> <p>Check the contents of the Backup Restore log (<i>ebr_alertfile</i>) that was output just before this message. If the error occurs repeatedly, acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.</p>
KAQB11513-E	There are too many or too few values in the <i>parameter-name</i> parameter.	<p><i>parameter-name</i> contains an invalid number of values.</p> <p>(S)</p> <p>Cancels command execution.</p> <p>(O)</p> <p>Check the format of the command, specify a correct parameter value, and then retry.</p>
KAQB11514-E	No license is set to allow use of basic functionality.	<p>The license for Hitachi Base software is not set up. This prevents a Backup Restore command from being executed.</p> <p>(S)</p> <p>Cancels command execution.</p> <p>(O)</p>

Message ID	Message	Description and Action
		Set up the license for Base software, and then retry.
KAQB11519-E	An attempt to acquire a license failed.	<p>This message may appear when another user is concurrently using some resources required for the operation, or a system error has occurred.</p> <p>(S) Cancels command execution.</p> <p>(O) Wait a while, and then re-execute. If the error occurs again, acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.</p>
KAQB11521-E	A device error occurred.	<p>The Backup Restore functionality cannot be used because an error occurred in a cluster management LU, a user LU, or the command device.</p> <p>(S) Cancels command execution.</p> <p>(O) Contact maintenance personnel.</p>
KAQB11642-E	The current directory is invalid.	<p>The current directory is invalid. Possible causes are as follows:</p> <ul style="list-style-type: none"> • The current directory is located under <code>/mnt</code>. • The current directory is set in a directory that does not exist. • The <code>horclogremove</code> command was executed in a <code>/home/nasroot/loginstance-number</code> subdirectory. <p>(S) Cancels command execution.</p> <p>(O) Change the current directory, and then re-execute.</p>
KAQB11701-I	Usage: <i>form-of-command</i>	<p>If a syntax error occurs or the <code>-h</code> option is specified, the format of the command appears.</p> <p>(S) Terminates command execution.</p> <p>(O) If a syntax error occurs, check the format of the command and then retry.</p>

Message ID	Message	Description and Action
KAQB11702-I	Usage: <i>form-of-command</i>	If a syntax error occurs or the <code>-h</code> option is specified, the format of the command appears. (S) Terminates command execution. (O) If a syntax error occurs, check the format of the command and then retry.
KAQB11703-I	Usage: <i>form-of-command</i>	If a syntax error occurs or the <code>-h</code> option is specified, the format of the command appears. (S) Terminates command execution. (O) If a syntax error occurs, check the format of the command, and then retry.
KAQB11704-E	The acquisition of cluster information has temporarily failed.	The NDMP functionality cannot be used because cluster information could not be obtained. (S) Cancels command execution. (O) Wait a while, and then re-execute. If the error occurs again, acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.
KAQB11705-W	Items are applied only to the logged-in node. If necessary, log in to each node on the cluster and check each setup.	Items are applied only to the logged-in node. If necessary, log in to each node on the cluster and check each setup. (S) This is a warning message and does not have any effect on system action. (O) Specify the same values in all nodes on the cluster.
KAQB11706-I	Usage: <i>form-of-command</i>	If a syntax error occurs or the <code>-h</code> option is specified, the format of the <code>tapeadd</code> command appears. (S) Terminates command execution. (O) If a syntax error occurs, check the format of the command, and then try again.

Message ID	Message	Description and Action
KAQB11707-I	Usage: <i>form-of-command</i>	If a syntax error occurs or the <code>-h</code> option is specified, the format of the <code>tapedel</code> command appears. (S) Terminates command execution. (O) If a syntax error occurs, check the format of the command, and then try again.
KAQB11708-I	Usage: <i>form-of-command</i>	If a syntax error occurs or the <code>-h</code> option is specified, the format of the <code>tapelist</code> command appears. (S) Terminates command execution. (O) If a syntax error occurs, check the format of the command, and then try again.
KAQB11709-E	A parameter is incorrect.	The specified parameter type is incorrect. (S) Cancels command execution. (O) Check the format of the command, specify a valid parameter, and then retry.
KAQB11710-I	Usage: <i>form-of-command</i>	If a syntax error occurs or the <code>-h</code> option is specified, the command syntax appears. (S) Terminates command execution. (O) If a syntax error occurs, check the syntax of the command, and then retry the operation.
KAQB11792-E	An attempt to display a message failed. 		error occurs repeatedly, acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.
KAQB11796-E	A processing inconsistency occurred. Maintenance information1 = <i>maintenance-information-1</i> Maintenance information2 = <i>maintenance-information-2</i>	A processing inconsistency occurred in the program. An error occurred in internal processing. (S) Cancels command execution. (O) Acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.
KAQB11797-E	System memory is insufficient. Maintenance information1 = <i>maintenance-information-1</i> Maintenance information2 = <i>maintenance-information-2</i>	Insufficient system memory was detected. (S) Cancels command execution. (O) Wait a while, and then re-execute. If the error occurs again, acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.
KAQB11798-E	The user-entered value could not be acquired. Maintenance information1 = <i>maintenance-information-1</i> Maintenance information2 = <i>maintenance-information-2</i>	The value entered interactively such as for changing a password could not be acquired. (S) Cancels command execution. (O) Re-execute the command. If the error occurs repeatedly, acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.
KAQB11801-I	The <i>command-name</i> command has started.	The command has started executing. (S) None. (O) None.
KAQB11802-I	The <i>command-name</i> command has finished.	The command has terminated normally. (S) None. (O) None.

Message ID	Message	Description and Action
KAQB11803-I	Usage: <i>form-of-command</i>	If a syntax error occurs or the <code>-h</code> option is specified, the format of the command appears. (S) Terminates command execution. (O) If a syntax error occurs, check the format of the command, and then retry.
KAQB11804-E	A parameter is incorrect.	The type or location of a parameter is invalid, or the number of parameters is incorrect. (S) Cancels command execution. (O) Check the format of the command, specify valid parameters, and then retry.
KAQB11805-E	The file system name is not specified.	A file system name was not specified in the argument of the command. (S) Cancels command execution. (O) Check the format of the command, specify the file system name, and then retry.
KAQB11806-E	The specified file system name is too long.	The length of the specified file system name is invalid. (S) Cancels command execution. (O) Specify a file system name of the correct length, and then retry.
KAQB11807-E	The specified file system name is invalid.	The specified file system name contains an invalid character. (S) Cancels command execution. (O) Specify a correct file system name, and then retry.
KAQB11808-E	The device file number is not specified.	The device file number was not specified in the argument of the command. (S) Cancels command execution.

Message ID	Message	Description and Action
		(O) Check the format of the command, specify the device file number, and then retry.
KAQB11809-E	The specified device file number (<i>device-file-name</i>) is invalid.	There is a mistake in the specified device file number. (S) Cancels command execution. (O) Specify the correct device file number, and then retry.
KAQB11810-E	The specified environment variable (<i>environment-variable-name</i>) is not set.	The setting value could not be displayed because the specified environment variable has not been set in the <code>horcsetenv</code> command. (S) Cancels command execution. (O) Specify the environment variable set in the <code>horcsetenv</code> command, and then re-execute the command. If you do not know the environment variable set in the <code>horcsetenv</code> command, re-execute the command without specifying the environment variable.
KAQB11811-E	The specified environment variable (<i>environment-variable-name</i>) could not be unset.	The setting for the specified environment variable could not be unset. (S) Cancels command execution. (O) Check the environment variable that can be specified in the <code>horcunsetenv</code> command, and then retry.
KAQB11812-E	The operation cannot be performed on the specified file system because unused capacity on the virtual LU is currently being freed up.	Unused capacity is currently being freed up on the virtual LU containing the specified file system. (S) Cancels processing. (O) Confirm that the freeing up of unused capacity on the virtual LU is complete, and then retry the operation. If the problem persists, acquire all the log files, and then contact maintenance support. For a list of these log files, see the online help.

Message ID	Message	Description and Action
KAQB11813-E	This operation cannot be performed on the virtual server.	This operation cannot be performed on the virtual server. (O) Perform this operation on the node.
KAQB11814-E	This operation cannot be performed in the current system configuration.	This operation cannot be performed in the current system configuration. (O) None.
KAQB11815-E	An attempt to unmount the differential-data snapshot to be mounted on demand failed.	An attempt to unmount the differential-data snapshots to be mounted on demand failed. (S) Stop execution of this command. (O) Wait a while, and then re-execute the command. If this message is output repeatedly, acquire all log data, and then contact maintenance personnel.
KAQB11820-E	The specified file system (<i>file-system-name</i>) does not exist.	Processing cannot be performed because the specified file system does not exist. (S) Cancels command execution. (O) Check the file system name in the list of file systems, specify the file system correctly, and then retry the operation.
KAQB11822-E	The specified file system name (<i>file-system-name</i>) is already being used.	You cannot use the specified file system name for a new copy destination file system because the specified name is being used in another file system. (S) Cancels command execution. (O) Specify a new file system name, and then re-execute.
KAQB11824-E	The specified file system name (<i>file-system-name</i>) is already being used by the file snapshot functionality or HFRR.	You cannot use the specified name as the name of the newly defined copy destination file system because the file snapshot functionality or HFRR is already using that name. (S) Cancels command execution. (O)

Message ID	Message	Description and Action
		Specify a new file system name, and then retry.
KAQB11825-E	The specified file system (<i>file-system-name</i>) cannot be separated from the node because the file system is a WORM file system.	The specified file system cannot be separated from the node because the file system is a WORM file system. (S) Cancels command execution. (O) Specify a valid file system, and then retry the operation.
KAQB11826-E	The specified file system (<i>file-system-name</i>) is blocked.	Processing could not be performed because the specified file system is blocked. (S) Cancels command execution. (O) Release the blocked state, and then retry.
KAQB11827-E	The specified file system (<i>file-system-name</i>) is a differential-data snapshot created with the file snapshot functionality.	Processing could not be performed because the specified file system is a differential-data snapshot created by the file snapshot functionality. (S) Cancels command execution. (O) Specify a correct file system name, and then retry.
KAQB11828-E	An operation for the specified file system (<i>file-system-name</i>) has been suppressed.	Processing cannot be executed because all operations for the specified file system have been suppressed by the <code>horcfreeze</code> command. (S) Cancels command execution. (O) Release the suppression on operations by using the <code>horcunfreeze</code> command, and then retry.
KAQB11829-E	The specified file system (<i>file-system-name</i>) is being expanded.	Processing cannot be executed because the specified file system is being expanded. (S) Cancels command execution. (O) Wait until the file system has finished expanding, and then retry.

Message ID	Message	Description and Action
KAQB11830-E	The name of an existing file system has the same first 14 characters as the specified file system name.	The first 14 characters of a tiered file system name must be unique. (S) Cancels command execution. (O) Specify a name for which the first 14 characters are unique, and then retry the operation.
KAQB11831-E	Creation of the tier policy failed. (detailed message = <i>detailed-message</i>)	Processing could not be performed because creation of the tier policy failed. (S) Cancels command execution. (O) Resolve the problem by following the instructions in the detailed message, and then retry the operation.
KAQB11838-W	A RAID Manager instance was created only on the node where processing is being executed.	The status of the other node in the cluster prevents the command from being executed on that node. (S) Creates the RAID Manager instance only on the node where processing is executed. (O) Re-execute the command on the other node in the cluster. Note: Substitute CCI for RAID Manager.
KAQB11839-W	A RAID Manager instance was deleted only on the node where processing is being executed.	The status of the other node in the cluster prevents the command from being executed on that node, or the RAID Manager daemon is running on the other node in the cluster. (S) Deletes the RAID Manager instance only on the node where processing is executed. (O) Re-execute the command on the other node in the cluster. Note: Substitute CCI for RAID Manager.
KAQB11840-E	The specified device file (<i>device-file-name</i>) does not exist.	The specified device file cannot be reserved, released, or connected to the node or virtual server because the device file does not exist.

Message ID	Message	Description and Action
		(S) Cancels command execution. (O) Use the <code>horcdevlist</code> command to check the existing device files, and then retry.
KAQB11841-E	The specified device file (<i>device-file-name</i>) is not defined by the <code>horcvmdescribe</code> command.	The copy destination file system cannot be connected to the node or virtual server with the <code>horcimport</code> command because the device file is not reserved with the <code>horcvmdescribe</code> command. (S) Cancels command execution. (O) Check the specified device file number, and then retry.
KAQB11842-E	The specified device file (<i>device-file-name</i>) is not defined by the <code>horcvmdescribe</code> command.	The copy destination file system cannot be connected to the node or virtual server by using the <code>horcvmimport</code> command because the device file was not reserved with the <code>horcvmdescribe</code> command. (S) Cancels command execution. (O) Check the specified device file number, and then retry.
KAQB11843-E	The specified device file (<i>device-file-name</i>) is already being used by the node to which the user logged in.	The specified device file is already being used by the logged-in node or virtual server. (S) Cancels command execution. (O) Check the specified device file number, and then retry.
KAQB11844-E	The specified device file (<i>device-file-name</i>) is already being used by another node.	You cannot specify a device file that is already being used by another node. (S) Cancels command execution. (O) Check the specified device file number, and then retry.
KAQB11845-E	The specified device file (<i>device-file-name</i>) is already being used by another file system.	A device file containing another file system is specified as the device file that is to contain the new copy destination file system.

Message ID	Message	Description and Action
		(S) Cancels command execution. (O) Check the specified device file number, and then retry.
KAQB11846-E	An error was detected while accessing a device file (<i>device-file-name</i>) that makes up the specified file system.	An error was detected while accessing a device file used for the specified file system. (S) Cancels command execution. (O) Correct the error, and then retry.
KAQB11847-E	The specified device file (<i>device-file-name</i>) is already being used by the file snapshot functionality or HFRR.	A device file being used by the file snapshot functionality or HFRR is specified as a device file that is to contain the new copy destination file system. (S) Cancels command execution. (O) Check the specified device file number, and then retry.
KAQB11848-E	An error was detected while accessing the specified device file (<i>device-file-name</i>).	An error was detected while the specified device file was being accessed. (S) Cancels command execution. (O) Correct the error, and then retry.
KAQB11849-E	At least one of the device files making up the specified file system (<i>file-system-name</i>) was not specified.	The file system cannot be connected to the node or virtual server because the device files that are to contain the copy destination file system are insufficient (S) Cancels command execution. (O) Check the device files that are to contain the new copy destination file system, specify all device file numbers, and then retry.
KAQB11850-E	The number of file systems has already reached the maximum number.	An attempt was made to create a number of file systems exceeding the maximum. (S) Cancels command execution.

Message ID	Message	Description and Action
		(O) Delete unnecessary file systems, and then retry. For the maximum number of file systems, see Help.
KAQB11851-E	The copy-destination file system made up of the specified device file or files cannot be connected to the node because the file system is a WORM file system.	The copy-destination file system that consists of the specified device file or files cannot be connected to the node because the file system is a WORM file system. (S) Cancels command execution. (O) Confirm the numbers of the specified device files, and then retry the operation.
KAQB11852-E	The copy destination file system specified with the <code>horcimport</code> command is a file system created by using a volume manager.	The copy destination file system contained in the specified device file was a file system created by using a volume manager, so it could not be connected to the node or virtual server. (S) Cancels command execution. (O) Use the <code>horcvmimport</code> command to connect the copy destination file system to the node or virtual server.
KAQB11853-E	The copy destination file system specified with the <code>horcvmimport</code> command could not be recognized as a file system that is using a volume manager.	The copy destination file system that is contained in the specified device file cannot be connected to a node or virtual server because the file system cannot be recognized as a file system that uses a volume manager. When the local data encryption feature is used, the copy destination file system cannot be connected to a different cluster node or virtual server. (S) Cancels command execution. (O) If the copy destination file system does not use a volume manager, use the <code>horcimport</code> command to connect the file system to a node or virtual server. In other cases, check whether the correct procedure was used and whether the correct device file was specified, and then retry.

Message ID	Message	Description and Action
		If the file system does use a volume manager, check whether the correct procedure was used and whether the correct device file was specified, and then retry the operation.
KAQB11854-E	The copy-destination file system contained in the specified device file could not be recognized.	Connection to the node or virtual server could not be established because the copy destination file system contained in the specified device file cannot be recognized. When the local data encryption feature is used, the copy destination file system cannot be connected to a different cluster node or virtual server. (S) Cancels command execution. (O) Check whether the correct procedure was used and whether the correct device file was specified, and then retry.
KAQB11855-E	The limit on the number of differential-data storage devices that can be created in the node or virtual server has been reached.	The limit on the number of differential-data storage devices that can be created in the node or virtual server has been reached. (S) Cancels command execution. (O) Release unnecessary differential-data storage devices, and then retry.
KAQB11856-E	Log files could not be removed because the environment variable (<i>environment-variable-name</i>) was not set.	Log files to be deleted could not be identified because the environment variable has not been set or the value that cannot be specified in the <code>horcsetenv</code> command has been set. (S) Cancels command execution. (O) Specify the environment variable correctly, or specify the instance number by using the <code>horclogremove</code> command together with the <code>-i</code> option, and then retry.
KAQB11857-E	Log files could not be removed because the daemon (<i>daemon-name</i>) was active.	Log files could not be deleted because the daemon that outputs logs was running. (S) Cancels command execution. (O)

Message ID	Message	Description and Action
		If you specified an incorrect log file for deletion, set the environment variable <code>HORCMINST</code> correctly, or specify the instance number by using the <code>horclogremove</code> command together with the <code>-i</code> option, and then retry. If all the log files you specified for deletion are correct, stop the CCI daemon indicated by <i>daemon-name</i> , and then retry the operation.
KAQB11858-E	An error occurred in file snapshot functionality processing for the specified file system (<i>file-system-name</i>).	Processing could not be executed because an error occurred in file snapshot functionality processing for the specified file system. (S) Cancels command execution. (O) Correct the file snapshot functionality error, and then retry.
KAQB11859-W	Separation of the copy destination file system has finished successfully on the processing node, but an attempt to disconnect a device file on the other node in the cluster has failed.	Communication between the nodes might have failed because a LAN cable was disconnected, one of the nodes in the cluster was heavily loaded, or the OS on the other node in the cluster was not running. (S) Disconnects the device file from only the processing node. (O) Make sure that the LAN cable is connected, the load on the node in the cluster has returned to a normal state, and the OS on the other node in the cluster is running. If the OS on the other node is running, ask maintenance personnel to restart the OS.
KAQB11860-E	The instance number is not specified.	An instance number has not been specified. (S) Cancels command execution. (O) Check the command format, specify an instance number, and then retry.
KAQB11861-E	The specified instance number (<i>instance-number</i>) is invalid.	There is an error in the specified instance number. (S) Cancels command execution. (O)

Message ID	Message	Description and Action
		Specify a valid instance number, and then retry.
KAQB11862-E	The specified instance number (<i>instance-number</i>) is already being used.	The specified instance number is already being used by another CCI instance. You cannot specify an instance number already in use when creating new instances. (S) Cancels command execution. (O) Specify another instance number, and then retry.
KAQB11863-E	The maximum number of RAID Manager instances has already been reached.	An attempt was made to create more CCI instances than the system will allow. (S) Cancels command execution. (O) Delete any unnecessary CCI instances, and then retry. For details on the maximum creatable number of CCI instances, see online Help. Note: Substitute CCI for RAID Manager.
KAQB11864-E	A RAID Manager instance for the specified instance number (<i>instance-number</i>) does not exist.	Processing could not be executed because the specified CCI instance does not exist. (S) Cancels command execution. (O) Check the existing CCI instances, specify a valid instance number, and then retry. Note: Substitute CCI for RAID Manager.
KAQB11865-E	The RAID Manager instance could not be removed because its daemon (<i>daemon-name</i>) was active.	The CCI instance could not be deleted, because the daemon that outputs logs is running. (S) Cancels command execution. (O) Check the instance number of the CCI instance you wish to delete. If the specified instance number is not valid, specify a valid instance number, and then retry. If the instance number is

Message ID	Message	Description and Action
		valid, stop the CCI daemon daemon-name, and then retry. Note: Substitute CCI for RAID Manager.
KAQB11867-Q	Are you sure you want to delete the specified RAID Manager instance? (y/n)	This message appears before a CCI instance is deleted. (S) Deletes the CCI instance if <i>y</i> is entered. Does not delete the CCI instance if <i>n</i> is entered. (O) Enter <i>y</i> or <i>n</i> . Note: Substitute CCI for RAID Manager.
KAQB11868-W	Acquisition of one or more instance numbers failed. (node number or instance numbers = <i>node-number-or-instance-numbers</i>)	The node or some of the virtual servers might not be in either the operating or stopped status, or the operation might be conflicting with an operation from another system administrator. Alternately, the process cannot be executed for the time being because the system is under a heavy load, or there might be a problem with the network. (S) Only displays the information of the acquired instance numbers. (O) Check the status of the nodes or virtual servers, and then retry. If a warning is displayed again, check the status of the network. If there are no problems with the network, contact maintenance personnel.
KAQB11869-E	The deletion of one or more policies failed. (detailed message = <i>detailed-message</i>)	Processing could not be executed because deletion of one or more policies failed to be deleted. (S) Cancels command execution. (O) Resolve the problem by following the instructions in the detailed message, and then retry the operation.
KAQB11870-I	The <i>command-name</i> command was entered. Entered command: <i>command-that-the-user-entered</i>	The command has been entered. (S) Starts the command syntax check.

Message ID	Message	Description and Action
		(O) None.
KAQB11871-I	The <i>command-name</i> command called <i>name-of-function</i> .	Maintenance information of the command is displayed. (S) None. (O) None.
KAQB11872-I	Maintenance information = <i>maintenance-information</i>	Maintenance information about the specified command was output. (S) None. (O) None.
KAQB11873-I	The <i>command-name</i> command has already been executed.	The specified command has already been executed. (S) Cancels command execution. (O) None.
KAQB11874-I	The signal was caught.	A signal that tried to stop the command execution was detected. (S) Cancels command execution. (O) None.
KAQB11875-E	The specified file system (<i>file-system-name</i>) is mounted.	Processing could not be executed because the specified file system has not been unmounted. (S) Cancels command execution. (O) Unmount the file system, and then retry.
KAQB11876-E	The differential-data snapshots created for the specified file system (<i>file-system-name</i>) are mounted.	Processing could not be executed because the differential-data snapshots that were created for the specified file system have not been unmounted. (S) Cancels command execution. (O) Unmount all of the differential-data snapshots created on the file system, and then retry.

Message ID	Message	Description and Action
KAQB11877-E	The specified file system (<i>file-system-name</i>) is already being used by HFRR.	Processing could not be executed because the specified file system is already being used by HFRR. (S) Cancels command execution. (O) Release the HFRR pair or remove the setting that specifies the file system as a file system used for making the latest differential-data snapshots visible, and then try again.
KAQB11878-E	Device files of two or more storage systems were specified.	Device files of two or more storage systems were specified. (S) Cancels command execution. (O) Specify a storage system device file, and then retry.
KAQB11879-W	Settings are applied only to the node on which the command was executed. Apply the same settings to the other node in the cluster as necessary.	When the same CCI environment variable has not been set for the nodes in the cluster, the functionality for linking with array volume replication functions on the failover-destination node might be unusable. (S) This is a warning message and does not have any effect on system action. (O) When you want to continue using the functionality for linking with array volume replication functions on the failover-destination node, specify the same CCI environment variable for both nodes in the cluster.
KAQB11880-E	An error occurred in the <i>command-name</i> command. Function = <i>name-of-function</i> , errno = <i>error-code</i>	An error occurred during command execution. (S) Cancels command execution. (O) Take appropriate actions according to <i>B. Troubleshooting for Message KAQB11880-E</i> .
KAQB11881-E	The <i>name-of-function</i> function returned that operation was already in progress.	During command execution, a function executing the processing already existed. (S) Skips the function that is already running.

Message ID	Message	Description and Action
		(O) None.
KAQB11882-E	An attempt to block access from CIFS clients and FTP clients to the specified file system (<i>file-system-name</i>) has failed. Access from NFS clients to the specified file system (<i>file-system-name</i>) has been blocked.	Access to the specified file system from CIFS and FTP clients has not been blocked because an error occurred in the processing to block those clients. Access from NFS clients has been blocked, and operations from the file snapshot functionality or HFRR have been suppressed. (S) Cancels command execution. Access to the specified file system from NFS clients, as well as operations on the specified file system from the file snapshot functionality or HFRR, will not resume until a manual failover is performed. (O) After performing a manual failover, contact maintenance personnel to acquire dump. After rebooting the OS, acquire all the log files, and then perform a failback.
KAQB11883-E	An attempt to block access to the specified file system (<i>file-system-name</i>) has failed.	An error occurred in the processing to block access from clients to the specified file system. Access from clients has not been blocked. (S) Cancels command execution. (O) Contact maintenance personnel, and acquire the dump files. After rebooting the OS, acquire all the log files.
KAQB11884-E	An attempt to start access from NFS clients to the specified file system (<i>file-system-name</i>) has failed.	Access from NFS clients to the specified file system could not be restarted. Access from the NFS clients remains stopped. (S) Cancels command execution. Access from NFS clients to the specified file system will not restart until the OS is stopped and a manual failover is performed. (O) Contact maintenance personnel, and acquire the dump. After rebooting the OS, acquire all the log files.

Message ID	Message	Description and Action
KAQB11885-E	An attempt to reopen access to the specified file system (<i>file-system-name</i>) has failed.	An error occurred in the processing to reopen access to the specified file system from CIFS and FTP clients. Clients cannot access the specified file system. (S) Cancels command execution. (O) Contact maintenance personnel, and acquire the dump. After rebooting the OS, acquire all the log files.
KAQB11886-E	The <i>file-name</i> file could not be opened.	The setting value for the environment variable could not be displayed, set, changed, or deleted because the file could not be opened. (S) Cancels command execution. (O) Acquire all Backup Restore log files, and then contact maintenance personnel. For a complete list of these files, see the online help.
KAQB11887-W	Processing to connect the copy destination file system to the node ended normally on the processing node, but an attempt to connect the device file on the other node in the cluster has failed.	Communication between the nodes might have failed because a LAN cable was disconnected, one of the nodes in the cluster was heavily loaded, or the OS on the other node in the cluster was not running. (S) Connects the device file only on the processing node. (O) Make sure that the LAN cable is connected, that the load on the node in the cluster has returned to a normal state, and that the OS on the other node in the cluster is running. If the OS is running, ask maintenance personnel to restart the OS.
KAQB11888-E	The specified resource group name (<i>resource-group-name</i>) is invalid.	The specified resource group name is invalid. (S) Cancels command execution. (O) Make sure that the resource group name is correct, and then try again.
KAQB11889-E	The specified resource group is not operating in the node	The specified resource group is not operating in the node for which the command was executed.

Message ID	Message	Description and Action
	for which the command was executed.	(S) Cancels command execution. (O) Make sure that the operation status of the resource group is appropriate, and then try again.
KAQB11890-E	An attempt to access a cluster management LU has failed, or access to a cluster management LU is being suppressed because a resource group was forcibly failed over. Maintenance information = <i>maintenance-information</i>	An attempt to access a cluster management LU has failed, or access to the cluster management LU is being suppressed because a resource group was forcibly failed over. (S) Cancels command execution. (O) Acquire the Backup Restore log files, and then contact maintenance personnel. For a list of the log files, see online Help.
KAQB11891-E	Some of the resources to be used for the request processing are being used by another user.	Some of the resources to be used for processing are being used exclusively by another user, or the node being used exclusively has stopped. (S) Cancels command execution. (O) Wait a while, and then execute again. If the node stops during processing, wait about 15 minutes or boot the stopped node. Details: <i>See G. Actions for When a Timeout Occurs due to the Inability to Secure the Resources Used for Processing, and follow the procedure that is listed.</i>
KAQB11892-E	A node that currently cannot be synchronized exists in the cluster.	A problem exists in the communication processing between nodes. (S) Cancels command execution. (O) The LAN cable might have been disconnected. Make sure that the LAN cable is connected. Also, the synchronization processing might not have completed because one of the nodes is heavily loaded. In this case, make sure that the state of the node changes to normal (that is, not heavily loaded), and then retry the operation.

Message ID	Message	Description and Action
		If the error occurs again, inform maintenance personnel.
KAQB11893-E	The acquisition of cluster information has temporarily failed.	Other users might be occupying some of the resources used for the processing, or a system error might have occurred. (S) Cancels command execution. (O) Wait a while, and then retry. If the error occurs again, contact maintenance personnel.
KAQB11894-E	The operations of the functionality for linking with array volume replication functions cannot be performed because a cluster, node, resource group, or virtual server is not running normally.	The functionality for linking with array volume replication functions cannot be used because the cluster, a node, a resource group, or a virtual server is not running normally. (S) Cancels command execution. (O) Check the status of the cluster, node, and resource group. Alternatively, check the status of the virtual server.
KAQB11895-E	Functionality for linking with array volume replication functions cannot be used because an operation from the file snapshot functionality or HFRR is processing.	An operation from the file snapshot functionality or HFRR is being processed on the specified file system. (S) Cancels command execution. (O) Wait until the operation from the file snapshot functionality or HFRR finishes, and then retry.
KAQB11897-E	The command cannot be used because a cluster configuration is not defined.	The command cannot be executed because a cluster is not defined. (S) Cancels processing. (O) Configure the cluster, and then retry.
KAQB11898-E	No license is set to allow use of basic functionality.	The commands used in the Base software cannot be executed because the license for the Backup Restore function is not set (S) Cancels command execution. (O)

Message ID	Message	Description and Action
		Set the license for the Base software, and then retry.
KAQB11899-E	An unexpected error occurred. Maintenance information = <i>maintenance-information</i>	An unexpected error occurred during command execution. (S) Cancels command execution. (O) Acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.
KAQB11901-I	Usage: <i>form-of-command</i>	If a syntax error occurs or you specify the <code>-h</code> option, the command syntax appears. (S) Terminates command execution. (O) If a syntax error occurs, check the command syntax, and then retry.
KAQB11916-E	An error occurred in the shared processing of commands. (error = <i>error</i>)	An error occurred in the shared processing of commands. (S) Cancels processing. (O) Acquire all log data, and then contact maintenance personnel.
KAQB12201-I	Operating statuses of NDMP servers:	This message displays the status of the NDMP server. (S) None. (O) None.
KAQB12202-E	The specified option is not permitted in the current NDMP server status.	An invalid option is specified for the current operating status of the NDMP server. (S) Does not change the operating status of the NDMP server. (O) Use the <code>ndmpcontrol -l</code> command to check the operating status of the NDMP server, specify available options, and then retry. When the NDMP server is connected to an external server (the backup server,

Message ID	Message	Description and Action
		media server, or NDMP server on the other node), terminate or cancel the backup processing, and then retry.
KAQB12206-E	The specified user name (userid) or current password (oldpasswd) is not registered in the NDMP server.	The user name specified by the command or the current password has not been registered in the NDMP server. (S) Does not change the password for the NDMP server. (O) Specify the user name registered in the NDMP server or the current password, and then retry.
KAQB12208-E	The new password (newpasswd) cannot be the same as the current password (oldpasswd).	The new password contains the same character string as the current password. (S) Does not change the password for the NDMP server. (O) Specify a character string for the new password that differs from the current password, and then retry.
KAQB12209-E	The new password (newpasswd) cannot be the same as the user name (userid).	The new password specified by the command contains the same character string as the user name. (S) Does not change the password for the NDMP server. (O) Specify a character string for the new password that differs from the user name, and then retry.
KAQB12210-E	The password (confirmpasswd) entered for confirmation must be the same as the new password (newpasswd).	The password entered for confirmation contains a character string that differs from the new password specified by the command. (S) Does not change the password for the NDMP server. (O) Specify a correct character string for the password for confirmation that matches the new password, and then retry.
KAQB12211-E	An attempt to change an NDMP server password failed.	An error occurred while updating the password for the NDMP server.

KAQB14124-E	The NDMP server could not connect with a media server.	The media server is not running or a connection between the media server and the NDMP server has not been established. (S) Cancels processing. (O) Start the media server or connect a media server with the NDMP server, and then try again.
KAQB14125-E	Online-backup processing is running in the file system containing the directory specified for a base point to be backed up.	Online-backup processing is running in the file system containing the directory specified for a base point to be backed up. (S) Cancels processing. (O) Wait for the finish of the online-backup processing for the file system containing the directory specified as the base point of the files and directories subject to backup, and try again.
KAQB14126-E	The file system containing the directory specified for the restoration destination is mounted as read-only. (<i>specified-value</i>)	The file system containing the directory specified for the restoration destination is mounted as read-only. (S) Cancels processing. (O) Check whether the file system containing the directory specified as the restoration destination is mounted as read and write.
KAQB14127-E	The specified directory cannot be specified as a base point to be backed up. (<i>specified-value</i>)	The system directory is specified as a backup target. (S) Cancels the processing. (O)

Message ID	Message	Description and Action
		Specify a directory that can be specified as a base point to be backed up, and then try again.
KAQB14128-E	The specified directory cannot be specified as the restoration destination. (<i>specified-value</i>)	A differential-data snapshot directory that has been made visible in the share is specified as a restoration destination. (S) Cancels the processing. (O) Specify a directory that can be specified as a restoration destination, and then try again.
KAQB14129-E	The path of the directory specified for the restore destination is invalid. (<i>specified-value</i>)	A system LU directory cannot be specified as a restore destination. (S) Cancels processing. (O) Specify a valid directory for the restore destination, and then try again.
KAQB14130-E	You cannot perform online-backup because an update installation has not finished on both nodes.	An update installation has not finished on both nodes. (S) Cancels processing. (O) Wait for an update installation on both nodes to finish, and then try again.
KAQB14200-E	Backed-up or restored data could not be accessed. (<i>error-message-from-internal-command</i>)	(S) Cancels processing. (O) Take corrective measures as described in <i>C. Troubleshooting for Messages KAQB14200-E, KAQB14208-W, KAQM37072-E, KAQM37076-E, KAQM37078-W, or KAQM37079-W</i> , and then retry the operation. If the error occurs repeatedly, acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.
KAQB14201-E	The file system was unmounted during backup or restoration processing.	During backup or restoration processing, a file system or differential-data snapshot might have been unmounted, a failover might have occurred, or a resource group or virtual server might have stopped. (S) Cancels processing.

Message ID	Message	Description and Action
		<p>(O)</p> <p>Recover the resource group, file system, virtual server, or differential-data snapshot so that they can be backed up or restored, and then retry the operation.</p>
KAQB14202-E	The total length of the names of the directories and files targeted for the running backup processing exceeds the system limit.	<p>The total length of the directory name and file name of a backup target exceeds the maximum length for the system.</p> <p>(S)</p> <p>Cancels processing.</p> <p>(O)</p> <p>Adjust the backup base point so that the total length of the names of the directories and files to be backed up does not exceed the system limit, and then try again. Alternatively, adjust the schedule so that multiple backups are not performed concurrently.</p>
KAQB14203-E	The numbers of directories and files to be restored exceeds the limit. (<i>the-maximum-number-of-directories-and-files</i>)	<p>The numbers of directories and files to be restored exceeds the limit.</p> <p>(S)</p> <p>Cancels processing.</p> <p>(O)</p> <p>Adjust the numbers of directories and files to be restored so that the numbers do not exceed the limit, and then try again. Alternatively, specify a base point to be backed up, and then restore the directories and files.</p>
KAQB14204-E	A timeout occurred in the NDMP server. (<i>timeout-value (units: minutes)</i>)	<p>A timeout occurred in communication between the NDMP server and a backup server, or between the NDMP server and a media server.</p> <p>(S)</p> <p>Cancels processing.</p> <p>(O)</p> <p>Consider how the backup is performed and, if necessary, change the timeout value of the NDMP server for each node.</p>
KAQB14205-E	Differential-data snapshots became invalid because the differential-data storage device ran out of space. (file system name = <i>name-of-the-file-system-for-which-the-differential-data-snapshots-were-created</i>)	<p>Data of differential-data snapshots became invalid.</p> <p>(S)</p> <p>Cancels processing.</p> <p>(O)</p>

Message ID	Message	Description and Action
		Correct the error in the differential-data snapshot, and then try again.
KAQB14206-E	An attempt to secure exclusion has failed.	Processing cannot continue because an attempt to secure exclusion has failed. (S) Cancels processing. (O) Restart the NDMP server, and try again. If the error occurs repeatedly, acquire the Backup Restore log files, and contact maintenance personnel. For a list of these log files, see the online help.
KAQB14207-E	The differential-data storage device cannot be used. (file system name = <i>name-of-the-file-system-for-which-differential-data-snapshots-are-created</i>)	An error occurred while a file system or differential-data snapshot was being accessed. (S) Cancels processing. (O) Correct the error in the differential-data snapshot in cooperation with maintenance personnel, and try again.
KAQB14208-W	Part of the backup or restoration processing could not be executed. (<i>warning-message-from-internal-command</i>)	(S) Continues processing. (O) Take corrective measures as described in <i>C. Troubleshooting for Messages KAQB14200-E, KAQB14208-W, KAQM37072-E, KAQM37076-E, KAQM37078-W, or KAQM37079-W</i> , and then retry the operation.
KAQB14211-W	Access to an NDMP server from a client not registered in the <code>/etc/hosts</code> file was refused. (<i>IP-address-of-the-client-that-lacks-permission</i>)	This message is output to a log file when an attempt is made to access the NDMP server from a client that is not a backup server registered in the <code>/etc/hosts</code> file. (S) Refuses access to the NDMP server. (O) If the accessing client is a backup server, correctly register the IP address and name of the backup server in the <code>/etc/hosts</code> file. Also, take action to prevent invalid access to the NDMP server.
KAQB14212-W	In the <code>/etc/hosts</code> file, more than 256 backup servers are registered.	This message is output to the log file when more than 256 backup servers are registered in the <code>/etc/hosts</code> file.

Message ID	Message	Description and Action
		<p>(S) When more than 256 backup servers are registered in the <i>/etc/hosts</i> file, the 257th and the following entries are ignored and are not assumed to be backup servers.</p> <p>(O) Correct the contents of the <i>/etc/hosts</i> file so that less than 257 backup servers are entered.</p>
KAQB14213-W	This is information about accesses to an NDMP server from clients not registered in the <i>/etc/hosts</i> file. (invalid client = <i>IP-address-of-the-client-that-lacks-permission</i> , first request = <i>date-when-the-first-connection-request-was-made</i> , last request = <i>date-when-the-last-connection-request-was-made</i> , times connected = <i>number-of-times-connections-were-made</i>)	<p>If a client that is not registered as a backup server in the <i>/etc/hosts</i> file attempts to access the NDMP server, the access information is output to the log file approximately every hour. However, if the NDMP server is frequently accessed by a client that is not registered, the system may be unable to output the access information every hour.</p> <p>(S) Continues processing.</p> <p>(O) If an invalid access occurred, use the information in this message to identify the client.</p>
KAQB14214-W	There is an error in the format of the backup server's IP address registered in the <i>/etc/hosts</i> file. (backup server = <i>name-of-the-backup-server</i>)	<p>This message is output to the log if a backup server is registered in the <i>/etc/hosts</i> file with an incorrectly formatted IP address.</p> <p>(S) Ignores the entry of the backup server specified using an incorrectly formatted IP address.</p> <p>(O) Correct the IP address of the backup server in the <i>/etc/hosts</i> file.</p>
KAQB14216-E	The specified file system (<i>file-system-name</i>) is blocked.	<p>The specified file system is blocked.</p> <p>(S) Terminates processing.</p> <p>(O) Check the status of the file system, and take action appropriate to that status.</p>
KAQB14217-E	Acquisition of information about the file system (<i>file-system-name</i>) has failed.	<p>An error may have occurred in the file system on which the operation is being performed.</p> <p>(S)</p>

Message ID	Message	Description and Action
		Terminates processing. (O) Check the status of the file system. If an error has occurred, take action appropriate to that status. If you are unable to check the status, or if the error recurs, contact maintenance personnel.
KAQB14225-E	Another device is using the tape drive. (<i>device-file-path</i>)	An attempt to access the tape drive failed because another device is using the tape drive. (S) Cancels processing. (O) Confirm that no other device is using the tape drive. If no other device is using the tape drive, execute the <code>tapelist -R</code> command to check the reservation status and key of the tape drive, and then execute the <code>taperelease</code> command to release the tape-drive. If another device is using the tape drive, wait a while, and then try again.

KAQG Messages (File Sharing Messages)

This chapter describes the meanings of the KAQG messages output by HDI systems (File Sharing messages).

- [KAQG messages](#)

KAQG messages

This section explains messages that have a message ID beginning with KAQG (File Sharing messages), and the actions to be taken if such messages appear.

Table 3-1 KAQG messages

Message ID	Message	Description and Action
KAQG01001-I	<i>driver-name: interface-name</i> The network interface is down. <i>detailed-information</i>	No action is required.
KAQG01002-I	<i>driver-name: interface-name</i> The network interface is up. <i>detailed-information</i>	No action is required.
KAQG01012-I	<i>driver-name: interface-name</i> NIC Link is Up <i>detailed-information</i>	No action is required.
KAQG01013-W	<i>driver-name: interface-name</i> NIC Link is Down	(S) <i>interface-name</i> is not available. Failover might occur. (O) Make sure that the cables and switches connected to <i>interface-name</i> are properly operating. If there is no problem with the cables and switches or if the link does not recover after removing the cause of the failure, acquire all the logs and then contact maintenance personnel.
KAQG10012-E	An I/O error occurred. (host = <i>host-information</i> , channel = <i>adapter-channel-ID</i> , TID = <i>target-ID</i> , LUN = <i>LU-number</i> , result = <i>result-information</i>) (<i>error-information</i>)	(S) An I/O request error occurred. (O) Check the connection status of the line from the system to the device where the I/O error occurred. If there is no problem with the connection, contact maintenance personnel. Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.
KAQG10014-E	A mismatch between data was found. (disk = <i>disk-number</i> , sector = <i>data-sector-number</i> , base offset =	Continues processing. (O) Contact maintenance personnel.

Message ID	Message	Description and Action
	<i>first-sector-number</i> , size = <i>sector-size</i>)	
KAQG10101-I	An LU recognition check will now be performed because all or some of the LUs that were being used before the OS was restarted could not be recognized.	(S) LU recognition checks will continue to be performed.
KAQG10102-I	All of the LUs that were being used before the OS was restarted were recognized. (number of LUs = <i>number-of-LUs</i>)	(S) OS startup processing will now continue.
KAQG10103-W	Some of the LUs that were being used before the OS was restarted could not be recognized. (number of recognized LUs = <i>number-of-LUs</i> , total number of LUs to be recognized = <i>number-of-LUs</i>)	(S) OS startup processing will now continue. (O) Make sure that LU assignments were not changed while the OS was not running. If no changes were made, follow the action in the KAQG10104-E message. If changes were made, check whether the KAQM14129-E or KAQG90001-E message was output. If either of these messages was output, follow the action in the KAQG10104-E message. No action is necessary if neither of the messages was output.
KAQG10104-E	Not all of the LUs that were being used before the OS was restarted could be recognized within the allotted time. (total number of LUs = <i>number-of-LUs</i> , allotted time (in seconds) = <i>time</i>)	(S) OS startup processing will now continue. (O) Turn off the power to the node, and then check the FC cables and the power to the storage systems. Turn on the storage systems if they are off, and correct any problems with the FC cable connections. After that, turn on the node, and restart the OSs. If the problem persists, contact maintenance support.
KAQG20001-E	An attempt to create a communication path to the NFS service for the client (<i>client</i>) has failed. <i>maintenance-information</i> = <i>maintenance-information</i>	An attempt to create a communication path to the NFS service for the client has failed. (O) Make sure the NFS service is running normally.
KAQG20002-E	The specified client name (<i>client</i>) is not registered in the name service.	The specified client name is not registered in the name service. (O)

Message ID	Message	Description and Action
	maintenance information = <i>maintenance-information</i>	Make sure the specified client name is correct.
KAQG20003-E	An attempt to communicate with the NFS service for the specified client (<i>client</i>) has failed. maintenance information = <i>maintenance-information</i>	An attempt to communicate with the NFS service to request unlocking of a specified client has failed. (O) Make sure the NFS service is running normally.
KAQG20004-I	Usage: nfslocksclear [-F] client [client ...]	The command syntax will be displayed. (O) Make sure the command syntax is correct, and then try again.
KAQG20005-E	The command syntax is invalid.	The command syntax will be displayed. (O) Make sure the command syntax is correct, and then try again.
KAQG20007-I	Usage: nfslockslist [-a] [[-f file] [-i [major:minor:]inode]][-p pid] [-t time] [client [client]...] -h	The command syntax will be displayed. (O) Make sure the command syntax is correct, and then try again.
KAQG20008-W	Line <i>number</i> cannot be displayed because an error occurred. The content that cannot be displayed is as follows. <i>file-lock-information</i>	Line <i>number</i> cannot be displayed because an error occurred. (O) None.

Message ID	Message	Description and Action
		Contact maintenance personnel.
KAQG46532-I	The problem in the fan was resolved. (fan = <i>index-number</i>)	The problem in the fan was resolved. (O) No action is required.
KAQG46533-E	A temperature anomaly was detected. (temperature sensor = <i>index-number</i>)	A temperature anomaly was detected. The system will now stop. (O) Check the temperature in the installation environment. Lower the temperature if it is too high. If you cannot find any abnormalities, contact maintenance personnel.
KAQG46534-E	An error in an internal hard disk was detected. (slot = <i>slot-number</i> , details = <i>detailed-information</i>)	If <i>detailed-information</i> is "Program_Fail_Count_Chip", a failure occurred in the backup power supply of the internal hard disk. As a result, data in the cache memory cannot be preserved when power is down. If <i>detailed-information</i> is "Media_Wearout_Indicator" or "Available_Reservd_Space", the internal hard disk is worn out. As a result, you might not be able to write data to the disk. (O) Ask maintenance personnel to change the node.
KAQG46535-W	An internal hard disk warning was detected. (slot = <i>slot-number</i> , details = <i>detailed-information</i>)	The total amount of time that the power of the internal hard disk has been on has exceeded the warning threshold value. This message is only an informational notice to prevent a failure from occurring. The system will continue running. (O) If you continue to use this product, an internal hard disk failure might occur. Contact maintenance personnel.
KAQG46536-E	An abnormal internal voltage was detected. (sensor ID = <i>sensor-id</i>)	An abnormal internal voltage was detected. (O) Contact maintenance personnel.
KAQG46537-I	The internal voltage returned to normal. (sensor ID = <i>sensor-id</i>)	The internal voltage returned to normal. (O) No action is required.
KAQG46951-I	Usage: <i>usage</i>	The command syntax is displayed. (S)

Message ID	Message	Description and Action
		- (O) If a syntax error occurred, check the syntax of the command, and then try again.
KAQG46952-E	An option is incorrect.	An option is incorrect. (S) Cancels command execution. (O) Check the syntax of the command and specify valid options, and then try again.
KAQG51000-E	The logical volume is blocked. (file system name = <i>file-system-name</i>)	The file system or differential-data snapshot cannot be used. (O) Contact maintenance personnel.
KAQG51001-E	A duplicate logical volume header was detected. For parameter information, see the KAQG51002-E message output to the system log.	The file system or differential-data snapshot containing the device file (<i>/dev/enas/lu LU-number</i>) indicated in the KAQG51002-E message cannot be used. (O) Contact maintenance personnel.
KAQG51002-E	Parameter information of the KAQG51001-E message is as follows: (LUN = <i>LU-number LU-number ...</i>)	When a duplicate logical volume header is detected, this message indicates the parameter information for the KAQG51001-E message. (O) Take the action described in the KAQG51001-E message.
KAQG51003-E	The logical volume entered a state where it cannot be accessed. (file system name = <i>file-system-name</i>)	The file system or differential-data snapshots can no longer be used. (O) Reset the node where this message was output. After that, acquire all the log data, and then contact maintenance personnel.
KAQG52000-W	The CIFS access log was either no longer acquired or was overwritten, because it reached the maximum size.	The CIFS access log reached the maximum size because the directory for saving this log has not been set or because this log has not been deleted. (O) Set a directory for saving the CIFS access log, or download and then delete this log. If a directory for saving the CIFS access log is set, make sure

Message ID	Message	Description and Action
		the file system is mounted and there is sufficient free space in the file system.
KAQG52001-W	There is not enough space to save the CIFS access log.	There is not enough space to save the CIFS access log because the directory for saving this log has not been set or because this log has not been deleted. (O) Set a directory for saving the CIFS access log, or download and then delete this log. If a directory for saving the CIFS access log is set, make sure the file system is mounted and there is sufficient free space in the file system.
KAQG52002-E	The change to a virtual IP address might not have been reflected into the CIFS service.	Processing failed because a system error occurred while the change to a virtual IP address was being reflected into the CIFS service. (O) Check the status of the CIFS service. If the CIFS service is online, restart it. If it cannot be restarted, acquire all the Management log files and contact maintenance personnel. If the CIFS service was offline before the operation was performed, then the change to the virtual IP address will be reflected into the CIFS service, and no further action is required.
KAQG52003-E	An attempt to stop the CIFS service has failed.	Processing failed because a system error occurred while attempting to stop the CIFS service in order to delete a virtual IP address. (O) Stop the CIFS service. If it cannot be stopped, acquire all the Management log files and inform maintenance personnel.
KAQG52004-E	Processing to acquire a list of differential-data snapshots has failed.	The differential-data snapshots cannot be made public to CIFS clients by using Volume Shadow Copy Service, because processing to acquire the list of snapshots failed. (O) Collect all the Management log files, and then contact maintenance personnel.
KAQG52005-E	Too many or too few parameters have been specified.	Command execution was canceled. (O) Check the command format, and then re-execute the command.

Message ID	Message	Description and Action
KAQG52006-E	The command cannot be executed with the resource group in its current state.	The resource group might be offline, or a failover might have occurred. (O) If the resource group is offline or a failover has occurred, resolve the issue, and then re-execute the command. If the command still cannot be executed, acquire the Management log files, and then contact maintenance personnel.
KAQG52007-E	An invalid option has been specified.	A specified option cannot be used by the command. (O) Specify valid options, and then re-execute the command.
KAQG52008-E	The specified file share does not exist.	The specified CIFS does not exist in the definition file. (O) Check the share name, and then retry the operation.
KAQG52009-E	The specified value is invalid.	The specified value cannot be specified for the specified option. (O) Specify a valid value.
KAQG52010-E	A system error occurred.	A system error occurred while a definition file was being edited. (O) Acquire the File Services Manager log files, and then contact maintenance personnel.
KAQG52012-E	Deletion of a file failed. (file path = <i>file-path</i> , message = <i>message</i> , user = <i>user-name</i> , erroff = <i>number-of-error-messages-not-output</i>)	Deletion of a file failed. An HCP communication error might have occurred or there might be a file system problem. (O) Check the communication with HCP and the state of the file system. If a problem has occurred, take appropriate action. If you cannot check the status or if this error occurs again, acquire all log data, and then contact maintenance personnel.
KAQG52013-I	Usage: cifsoptlist : cifsoptlist {-s -x share_name} : cifsoptlist -h	No action is required.
KAQG52014-I	Usage: cifsoptset option {-s -x share_name} : cifsoptset -h	No action is required.

If this does not resolve the issue, collect all the log files from File Services Manager, and then contact a member of the support team.</p>
KAQG52039-W	The number of connections to winbindd is increasing.	<p>The number of connections to winbindd is increasing.</p> <p>(O)</p> <p>The response of the domain controller seems to be delayed. Check whether the load on the domain controller is high or the network has become slow.</p>
KAQG52040-W	An error occurred because the domain could not be found by using SID name resolution.	<p>An error occurred because the domain could not be found by using SID name resolution.</p> <p>(O)</p> <p>An error was returned by the domain controller when an attempt was made to obtain information about trusted domains. Check and, if necessary, revise the settings for trusted domains on the domain controller.</p>
KAQG52041-W	Processing the authentication request is taking time.	<p>Processing the authentication request is taking time.</p> <p>(O)</p> <p>If using Active Directory authentication, LDAP authentication, or the NIS server:</p> <p>A response from an external server might be delayed or the load on the system might be high. Check whether the load on the external server is high or the network is slow. Also, check whether client access has become more concentrated, and distribute it if necessary. If client access does not succeed for a long time, restart the CIFS service.</p> <p>If not using Active Directory authentication, LDAP authentication, or the NIS server:</p>

Message ID	Message	Description and Action
		The load on the system might be high. Check whether the load on the external server is high or the network is slow. Also, check whether client access has become more concentrated, and distribute it if necessary. If client access does not succeed for a long time, restart the CIFS service.
KAQG52043-W	To apply the settings to any CIFS clients that were connected to the CIFS service before you changed the settings, log off of the CIFS client and then log on again. Alternatively, restart the CIFS service.	(O) To apply the settings to any CIFS clients that were connected to the CIFS service before you changed the settings, log off of the CIFS client and then log on again. Alternatively, restart the CIFS service.
KAQG52044-I	To enable the specified settings, change the CIFS service settings so that the CIFS access log is acquired.	(O) To enable the specified settings, change the CIFS service settings so that the CIFS access log is acquired.
KAQG52045-W	A request to set up an unsupported item was received from a CIFS client.	A request to set up a file or folder was received from a CIFS client, but the item was not set up because it is not supported. (O) Check the CIFS access log and then check the target file, folder, and item.
KAQG52051-E	The combination of versions set for the protocol version is invalid. The protocol version set for <code>client_max_protocol</code> must be the same as, or later than, the protocol version set for <code>client_min_protocol</code> .	(S) Command execution was canceled. (O) Set a valid protocol version, and then re-execute the command.
KAQG52052-E	The combination of versions set for the protocol version is invalid. The protocol version set for <code>client_ipc_max_protocol</code> must be the same as, or later than, the protocol version set for <code>client_ipc_min_protocol</code> .	(S) Command execution was canceled. (O) Set a valid protocol version, and then re-execute the command.
KAQG52053-I	Set <code>client_max_protocol</code> , <code>client_min_protocol</code> , and <code>client_signing</code> , and then restart the node.	(O) Set <code>client_max_protocol</code> , <code>client_min_protocol</code> , and <code>client_signing</code> , and then restart the node. For a cluster configuration, set each node so that all of the settings in the cluster are the same, and then restart both nodes.

Message ID	Message	Description and Action
KAQG52054-I	Set <code>client_ipc_max_protocol</code> , <code>client_ipc_min_protocol</code> , and <code>client_ipc_signing</code> , and then restart the CIFS service.	(O) Set <code>client_ipc_max_protocol</code> , <code>client_ipc_min_protocol</code> , and <code>client_ipc_signing</code> , and then restart the CIFS service.
KAQG52900-E	An attempt to start the UPnP service failed. (error code = <i>error-code</i>)	An attempt to start the UPnP service failed. (O) Acquire all the log files, and then contact maintenance personnel.
KAQG52901-I	The UPnP service started successfully.	The UPnP service started successfully. (O) None.
KAQG53003-W	The NTP daemon is not running.	An internal error occurred in the NTP daemon. (O) Restart the node, and then check both the connection status between the node and the NTP server and the NTP server environment variables. For details on how to perform each operation, see Help. If this message continues to be output even after the necessary operations are performed, acquire the NTP daemon core file and the management log files, and then contact maintenance personnel.
KAQG53004-W	The NTP daemon could not be synchronized with the NTP server over a set period of time.	Communication between the node and the NTP server might not be possible, or the NTP server might not be synchronized with other NTP servers. (O) Confirm that the NTP server connection and environment settings are correct, and that the NTP server is synchronized with other NTP servers. If two NTP servers are set up, make sure that their times are synchronized. For details about checking the connection status of an NTP server and the environment settings of an NTP server, see online Help. After you confirm these points, if this message is still output, acquire all the Management log files, and then contact maintenance personnel.
KAQG53005-I	The NTP daemon started periodic time synchronization with the NTP server.	The NTP daemon started periodic time synchronization with the NTP server. (O)

Message ID	Message	Description and Action
		No action is required.
KAQG53009-I	Usage: <i>command-syntax</i>	This message displays the syntax of a command. (O) No action is required.
KAQG53010-E	An invalid parameter is specified. (details = <i>details</i>)	An invalid parameter is specified. (O) Specify valid parameters according to the Help.
KAQG53011-E	There are too many or too few parameters. (details = <i>details</i>)	There are too many or too few parameters. (O) Check the command syntax, specify the parameters correctly, and then try again.
KAQG53012-E	There is not enough free space in the output directory. (details = <i>details</i>)	There is not enough free space in the output directory. (O) Specify a directory that has more than 500 MB of free space.
KAQG53013-E	An attempt to output a system activity file failed. (details = <i>details</i>)	An error occurred during output of a system activity file. The file system to which the file is to be output might be full, or a problem might exist with the file system or disk to which the file is to be output. (O) Retry the operation. If this error occurs repeatedly, collect all log data, and then contact maintenance personnel.
KAQG53014-W	Collection of system activity information was interrupted because of a timeout. (details = <i>details</i>)	Collection of system activity information timed out because the system is currently under a heavy load. (O) Collect any acquired system activity files and all log data, and then contact maintenance personnel.
KAQG53015-E	An internal error occurred. (details = <i>details</i>)	A system error occurred. (O) Collect all log data, and then contact maintenance personnel.
KAQG53016-I	Function information is already being collected.	Function information is already being collected. (O) No action is required.

Message ID	Message	Description and Action
KAQG53017-W	There is a time difference of five minutes or more between the node and the NTP server.	<p>This message is output when the time difference between the node and the NTP server exceeds five minutes.</p> <p>Even when this message is output, time synchronization is successfully executed on the node. However, it might take a long time to match the node time to the external NTP server time. (For example, it might take seven days to correct a five-minute difference.)</p> <p>Kerberos authentication for Active Directory might also fail.</p> <p>(O)</p> <p>When it is possible to wait a long time to match the node time to the NTP server time, no actions are required.</p> <p>If you manually match the node time to the NTP server, check which time is wrong, in advance.</p> <p>If the node time is wrong, execute a <code>timeset</code> command to perform time synchronization manually, and then restart the node.</p> <p>If the NTP server time is wrong, correct it appropriately.</p> <p>For details about how to check the connection state with the NTP server and how to set up the NTP server, see the Help.</p>
KAQG53018-E	A duplicate IPv6 address was detected. Interface = <i>name-of-interface-where-duplicate-IPv6-address-was-detected</i> , IPv6 address = <i>duplicate-IPv6-address</i> , Src MAC = <i>source-MAC-address</i>	<p>Another host also uses the same IPv6 address in the network connected to the interface where a duplication was detected. Therefore, the IPv6 address displayed for that interface did not become valid.</p> <p>(O)</p> <p>Check whether another host also uses the same IPv6 address in the network connected to the interface where the duplication was detected. If such a host exists, change the IPv6 address of either host. Note that the IPv6 address used by that interface might have become unavailable. Perform either of the following operations to correct the problem, and then confirm that the SNMP message is not received again:</p> <ul style="list-style-type: none"> • If the SNMP message was received when an IP address was set, changed, or deleted:

Message ID	Message	Description and Action
		<p>Delete the IP address of the interface where the duplication was detected, and then set the IP address again.</p> <ul style="list-style-type: none"> If the SNMP message was received on a virtual server: Delete the IP address of the interface (used by the virtual server) from the node, and then set the IP address again. If the virtual server uses only one interface, restart the virtual server.
KAQG53019-W	The network might be in a loop configuration. Interface = <i>interface-name</i>	<p>A network connected to an interface where a duplication was detected might include a loop.</p> <p>(O)</p> <p>Check whether there is a loop in the network connected to the interface where a loop was detected. If the network has a loop, verify the LAN cable connections. Note that if the interface where a loop was detected uses an IPv6 address, the IPv6 address might have become unavailable. Use either of the following procedures to correct the problem, and then confirm that the SNMP message is not received again:</p> <ul style="list-style-type: none"> If the SNMP message was received when the OS was started or when the IP address was set, changed, or deleted: Delete the IP address of the interface where the loop was detected, and then set the IP address again. If no IP address is set for the interface, you do not need to perform this operation. If the SNMP message was received on a virtual server: Delete the IP address of the interface (used by the virtual server) from the node, and then set the IP address again. If the virtual server uses only one interface, restart the virtual server.

KAQG72011-E	An error was detected that requires the OS to be stopped. The synchronization of the cluster information might become invalid.	<p>servers are running on their respective nodes, no action is required.</p> <p>This message might be output when the OS starts on only one cluster node after the OSs on both cluster nodes were stopped at the same time. An operation (configuration change operation) executed on one node, before the OSs on both nodes stopped, has not been reflected to the other node. Stop the OS to synchronize cluster information, and then contact maintenance personnel.</p> <p>(S)</p> <p>Processing for starting the cluster continues. Resource groups for both cluster nodes start on one of the cluster nodes.</p> <p>(O)</p> <p>To synchronize cluster information, perform the operations below. Do not start the OS on the other cluster node until step 2 finishes.</p> <ol style="list-style-type: none"> 1. Stop the OS on the node that output this message. 2. Make sure that the OS has stopped, and then start the OS on the other node. 3. Make sure that the OS has started, and then start the OS that was stopped in step 1. <p>If the OS on the other node has started before step 1 is performed, a recovery operation different from the one that is usually done is required because cluster information has already become invalid. Collect all the log data on both nodes, and then contact maintenance personnel.</p>
KAQG72012-W	Communication via the main heartbeat cable was interrupted.	<p>Inter-node communication via the main heartbeat cable cannot be established.</p> <p>A hardware error or software error might have occurred in the path for communication via the main heartbeat cable.</p> <p>(S)</p> <p>Switches to the sub heartbeat cable to continue user operations.</p> <p>If an error occurs in the sub heartbeat cable, the error might cause a communication error between nodes.</p>

Message ID	Message	Description and Action
		(O) Contact maintenance personnel.
KAQG72013-W	Communication via the sub heartbeat cable was interrupted.	Inter-node communication via the sub heartbeat cable cannot be established. A hardware error or software error might have occurred in the path for communication via the sub heartbeat cable. (S) Continues the user operations by using the main heartbeat cable only. If an error occurs in the main heartbeat cable, the error might cause a communication error between nodes. (O) Check whether the following operations can be performed: - From each node, display the Browse Cluster Status page (for <i>Cluster / Node status</i>) of the Cluster Management dialog box. - Log into each node by using the fixed IP address of the management port. If these operations cannot be performed from one of the nodes, there might be a malfunction in the management port. In this case, a failover might occur or service might become unavailable. Check the status of the cluster, and then recover from the malfunction. If the cause of the malfunction cannot be identified, or if recovery from the malfunction is not possible, contact maintenance personnel.
KAQG72014-I	Communication via the main heartbeat cable was restored.	No action is required.
KAQG72015-I	Communication via the sub heartbeat cable was restored.	No action is required.
KAQG72016-E	The cluster status is DISABLE.	The failover function was disabled because an error was detected in the inter-node communication path (both the main heartbeat and sub heartbeat cables). (S) Files can still be accessed, but operations cannot be executed for resource groups, nodes, the cluster, or resources. In addition, a failover might no longer be possible.

Message ID	Message	Description and Action
		(O) Contact maintenance personnel.
KAQG72018-E	The OS will start without starting the cluster, because starting the cluster might cause a failover to occur repeatedly.	The OS will start without the cluster being started for one of the following reasons: <ol style="list-style-type: none"> 1. Two or more system failures (a panic or a non-responding OS) occurred within an hour. 2. During OS startup, in a state in which services were already being provided on one of the two nodes, an error was detected in the inter-node communication path (both the main heartbeat and sub heartbeat cables). (S) Operations can no longer be executed for resource groups, nodes, the cluster, and resources. If the KAQG72016-E message has been output, files can still be accessed, but failover might no longer be possible. (O) Contact maintenance personnel.
KAQG72019-E	Processing to start or stop the virtual server (<i>virtual-server-ID</i>) failed. KAQG91101-E	The warning threshold specifications that trigger a warning notification exceeds the capacity of the file system (<i>file-system-name</i>).	<p>The warning threshold specification that triggers a warning notification exceeds the capacity of the file system (<i>file-system-name</i>). If multiple file systems are specified, processing will continue.</p> <p>(O)</p> <p>For the warning threshold that triggers a warning notification, specify a value that is equal to or less than the file system capacity.</p>
KAQG91103-E	The setting for retaining the file creation date is not specified. (file system name = <i>file-system-name</i>)	<p>The creation date cannot be set for an existing file or directory because the setting for retaining the file creation date is not specified.</p> <p>(O)</p> <p>Specify the setting for retaining the file creation date, and then retry the operation.</p>
KAQG91104-E	The target file system or directory (<i>file-system-name-or-directory-name</i>) does not exist.	<p>The target file system or directory does not exist.</p> <p>(O)</p> <p>Check and, if necessary, revise the target file system or directory, and then retry the operation.</p>

Message ID	Message	Description and Action
KAQG91105-E	The specified path (<i>path-name</i>) is not a directory.	The specified path is not a directory. (O) Specify a directory, and then retry the operation.
KAQG91106-E	The ACL type cannot be changed because the specified file system is a WORM file system.	A WORM file system's ACL type cannot be changed after the file system is created. (O) Check the file system's settings from the File Systems list.
KAQG91107-E	The execute permission cannot be acquired because the specified file system is a WORM file system.	The following command cannot be executed for WORM file systems: fsctl -c -x -o add_exeauth (O) Check the file system's settings from the File Systems list. To acquire the execute permission for files in a WORM file system, edit the properties of individual files.
KAQG91201-E	The target file system is mounted with the quota setting disabled.	The operation cannot be performed because the target file system is mounted with the quota setting disabled. (O) Enable the quota setting, mount the target file system, and then retry the operation.
KAQG91203-E	The specified value in the '-x' option is incorrect.	A character other than a numerical value is entered. (O) Enter a numerical value, and then retry the operation. x: The specified option
KAQG91204-E	The block soft limit value exceeds the maximum.	The operation cannot be performed because the block soft limit value exceeds the maximum. (O) Enter a value no greater than the maximum (1,073,741,823) setting for a block limit value, and then retry the operation.
KAQG91205-E	The i-node soft limit value exceeds the maximum.	The operation cannot be performed because the i-node soft limit value exceeds the maximum. (O) Enter a value no greater than the maximum (4,294,967,295) setting for

Message ID	Message	Description and Action
		an i-node value, and then retry the operation.
KAQG91206-E	The block hard limit value exceeds the maximum.	The operation cannot be performed because the block hard limit value exceeds the maximum. (O) Enter a value no greater than the maximum (1,073,741,823) setting for a block limit value, and then retry the operation.
KAQG91207-E	The i-node hard limit value exceeds the maximum.	The operation cannot be performed because the i-node hard limit value exceeds the maximum. (O) Enter a value no greater than the maximum (4,294,967,295) setting for an i-node value, and then retry the operation.
KAQG91208-E	The value specified for the grace period is invalid.	A value outside the valid range (1-9,999) has been specified for the grace period. (O) Specify a value of 1-9,999 for the grace period, and then retry the operation.
KAQG91209-E	A value larger than the hard limit was specified for the soft limit.	A soft limit value that is larger than the hard limit value cannot be specified. (O) Enter a soft limit value no greater than the hard limit value.
KAQG91210-E	A quota is not set for the specified directory.	(O) Specify a directory for which a quota is set.
KAQG91211-E	The specified directory (<i>path-name</i>) does not exist.	(O) Make sure the path of the target directory is correct, and then retry the operation.
KAQG91212-E	The specified user (<i>user-name</i>) does not exist.	(O) Make sure the user name is correct, and then retry the operation.
KAQG91213-E	The specified group (<i>group-name</i>) does not exist.	(O) Make sure the group name is correct, and then retry the operation.
KAQG91214-I	There is no item to display.	No action is required.

Message ID	Message	Description and Action
KAQG91215-E	The number of directories for which a quota has been set has reached the maximum.	A new quota cannot be set because the number of directories for which a quota has been set has reached the maximum. (O) Please check how many directories for which a quota has been set exist in the file system. Also, if there is an unnecessary quota set for a directory, cancel that quota setting.
KAQG91216-E	A mounted directory was detected during processing.	A differential-data snapshot in a share might have been made public. (O) If a differential-data snapshot in a share has been made public, unmount the snapshot, and then retry the operation.
KAQG91218-E	The specified value for the monitoring time is invalid.	The specified value for the monitoring time is not in the date format. (O) Specify the value in the date format, and then try again.
KAQG91219-E	The specified value for the monitoring time is invalid.	The specified value for the minutes is not a multiple of five. (O) Specify the monitoring time as a multiple of five (0-55) minutes, and then try again.
KAQG91220-E	The number of monitoring time settings has reached the maximum.	You are attempting to specify a monitoring time that exceeds the maximum setting for the monitoring time. (O) Retry after deleting the unneeded monitoring time settings. See the help for the maximum number of monitoring time settings.
KAQG91221-E	The specified value cannot be used for the SNMP trap notification mode.	The value specified for the quota monitoring time specification does not correspond to the value specified for the SNMP trap notification mode. (O) Check the command format, specify a correct parameter, and then try again.
KAQG91222-E	Some of the resources to be used for the requested processing are being used by another user.	Some of the resources to be used for processing are being used exclusively by another user, or the node being used exclusively has stopped.

Message ID	Message	Description and Action
		(O) Wait a while, and then execute again. If the node stops during processing, wait about 15 minutes or boot the stopped node.
KAQG91223-E	An attempt to open a system file has failed.	There might be a problem in the system file or contention with other processing might have occurred. (O) Wait a while, and then try again. If the error occurs again, check the settings for the OS disk. If there is no problem, acquire all of the kernel logs, and then contact maintenance personnel. See the help for details on how to acquire kernel logs.
KAQG91224-E	Editing of the monitoring time failed because of an unexpected error in internal processing.	A problem may exist in the editing processing of the monitoring time. (O) Check the OS disk settings and whether an error exists on the OS disk. If there is no problem, acquire all of the kernel logs, and then contact maintenance personnel. See the help for details on how to acquire the kernel logs. Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.
KAQG91225-E	In the cluster, nodes that cannot synchronize exist.	A problem exists in the communication processing between nodes. (O) The LAN cable might have been disconnected. Make sure that the LAN cable is connected. Also, the synchronization processing might not have completed because one of the nodes is heavily loaded. In this case, make sure that the state of the node changes to normal (that is, not heavily loaded), and then retry the operation. If the error occurs again, inform maintenance personnel.
KAQG91226-E	The specified notification mode cannot be changed.	Only the notification mode cannot be changed, because a monitoring time is not set.

Message ID	Message	Description and Action
		(O) Set one or more monitoring times, and then try again.
KAQG91227-E	An error occurred in internal processing.	An error occurred in internal processing. The format of the <code>stquotaset</code> command is invalid, or there might be a problem in the processing for either the OS disk or the file system. (O) Check the command format, and then try again. If the error occurs again, contact maintenance personnel. Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.
KAQG91228-E	Editing of the monitoring time failed on the synchronized node in the cluster.	A problem might exist in the editing processing for the monitoring time on the synchronized node in the cluster. (O) Check the OS disk settings and whether an error exists on the OS disk. If there is no problem, acquire all of the kernel logs, and then contact maintenance personnel. See the help for details on how to acquire the kernel logs.
KAQG91229-W	Processing could not be completed because the end user was accessing the directory <i>directory-name</i> . The command will retry processing.	(S) Processing could not be completed because the end user was accessing the directory <i>directory-name</i> . The command will retry processing. (O) If this message is repeatedly output, notify the end user to temporarily stop accessing the directory.
KAQG91230-I	In the cluster, nodes that cannot synchronize exist.	A problem exists in the communication processing between nodes. (O) The LAN cable might be disconnected. Make sure it is connected. Also, the synchronization processing might not have completed because one of the

Message ID	Message	Description and Action
		nodes was heavily loaded. Make sure that the load status for the nodes is normal, and then check the monitoring times for each node by using the <code>stquota</code> command. If the monitoring time settings differ between nodes, delete any unnecessary monitoring time setting.
KAQG91231-I	A bind-mounted directory (<i>directory-name</i>) was detected during processing.	The bind-mounted directory and files under the control of the bind-mounted directory are not counted as a quota resource, and the quota cannot be removed. (O) No action is necessary.
KAQG91232-E	The subtree quota cannot be set for the specified path (<i>directory-name</i>).	A function is being used that cannot set subtree quotas in the specified directory. (O) No action is necessary.
KAQG91233-E	A value smaller than the soft limit was specified for the hard limit.	A hard limit value that is smaller than the soft limit value cannot be specified. (O) Enter a hard limit value that is equal to or greater than the soft limit value.
KAQG91234-E	The subtree quota could not be set for the specified directory (<i>directory-path</i>) because a subtree quota is already set for the directory.	A subtree quota is set for the directory (<i>directory-path</i>). (O) Remove the subtree quota set for the directory (<i>directory-path</i>), and then retry the operation.
KAQG91235-E	Monitoring could not be set up because the size of the monitoring setting file exceeded the limit.	The size of the monitoring setting file exceeded the limit. (O) Delete any unnecessary monitoring settings, and then retry the command.
KAQG91236-E	An attempt to specify the subtree quota failed.	Possible causes are as follows: <ul style="list-style-type: none"> • A subtree quota has already been set for a directory above or below the specified directory, and the specified subtree quota tree exceeds three directory layers. • One of the following has already been set above the specified directory: a subtree quota for the user or the group, or the default quota of a directory. (O)

Message ID	Message	Description and Action
		Check the subtree quota, and then retry the operation.
KAQG91237-E	The command cannot be executed because a subtree quota below the specified directory has already been set.	The subtree quota below the specified directory has been already set. (O) Check the subtree quota, and then retry the operation.
KAQG91301-E	The specified file system (<i>file-system-name</i>) is not blocked.	The specified file system is not blocked. (O) Check the specified file system, and then try again.
KAQG91302-E	An error occurred in internal processing.	An error occurred in internal processing. The format of the <code>repair</code> command is invalid, or there might be a problem in the processing for either the OS disk or the file system. (O) Check the format of the command, and then try again. If the error occurs again, acquire all of the kernel logs, and then contact maintenance personnel. For details on how to acquire kernel logs, see Help.
KAQG91303-W	An error occurred in internal processing.	An error occurred in internal processing, but the specified file system was repaired successfully. Next time it might take a long time to execute a failover or failback, or to mount a file system. (O) Mount the file system.
KAQG91304-I	The file system is normal.	No action is required.
KAQG91305-I	An inconsistency might have occurred in the file system (<i>file-system-name</i>).	An inconsistency might have occurred in the file system. (O) Repair the file system, or recover it from the backup file.
KAQG91306-E	An attempt to repair the file system (<i>file-system-name</i>) has failed.	The file system cannot be repaired by using the <code>fsrepair</code> command. (O) Recover the file system from the backup file.
KAQG91307-E	An attempt to mount the file system (<i>file-system-name</i>) failed because the file system is blocked.	An attempt to mount the file system failed because the file system is blocked. (O)

Message ID	Message	Description and Action
		Recover the file system.
KAQG91308-I	The specified file system (<i>file-system-name</i>) has been mounted.	The specified file system has been mounted. (O) To view how much space the file system is using, execute the <code>fslist</code> command.
KAQG91309-I	Command execution cannot be canceled during this phase.	Command execution will continue because it cannot be canceled during this phase.
KAQG91310-I	Execution of the <code>fsrepair</code> command was canceled.	Execution of the <code>fsrepair</code> command was canceled.
KAQG91311-I	Execution of the <code>fsrepair</code> command was canceled.	Execution of the <code>fsrepair</code> command was canceled, but the specified file system was repaired successfully. Next time it might take a long time to execute a failover or fallback, or to mount a file system.
KAQG91312-E	<code>fsrepair</code> command processing was cancelled because the amount of memory requested for the command exceeded the threshold.	<code>fsrepair</code> command processing was cancelled because the amount of memory requested for the command exceeded the threshold. (O) If you want to ignore the threshold when executing the <code>fsrepair</code> command, specify the <code>-F</code> option and then re-execute the command.
KAQG91501-E	A parameter (<i>parameter</i>) is invalid.	A specified parameter is invalid. (O) Acquire all the log data, and then contact maintenance personnel.
KAQG91502-E	There are too many or too few parameters.	There are too many or too few parameters. (O) Acquire all the log data, and then contact maintenance personnel.
KAQG91503-E	The specified file does not exist. (file path = <i>file-path</i>)	No file exists at the specified path. (O) Acquire all the log data, and then contact maintenance personnel.
KAQG91504-E	An attempt to read the specified file failed. (file path = <i>file-path</i>)	An unexpected error occurred while reading the file. (O) Acquire all the log data, and then contact maintenance personnel.

Message ID	Message	Description and Action
KAQG91505-E	The format of the specified file is invalid. (file path = <i>file-path</i>)	The format of the specified file is invalid. (O) Acquire all the log data, and then contact maintenance personnel.
KAQG91506-E	The specified file system has not been mounted. (file system = <i>file-system-name</i>)	The specified file system has not been mounted. (O) Acquire all the log data, and then contact maintenance personnel.
KAQG91507-E	The specified file system has been mounted as read-only. (file system = <i>file-system-name</i>)	The specified file system has been mounted as read-only. (O) Acquire all the log data, and then contact maintenance personnel.
KAQG91508-E	The specified ID is invalid. (ID = <i>ID</i>)	The specified value is not a number, or is outside the valid range. (O) Acquire all the log data, and then contact maintenance personnel.
KAQG91509-E	No process exists with the specified ID. (ID = <i>ID</i>)	The process with the specified ID is currently not running. (O) Acquire all the log data, and then contact maintenance personnel.
KAQG91510-E	The process with the specified ID is already running. (ID = <i>ID</i>)	The single-instance processing with the specified ID is already running. (O) Acquire all the log data, and then contact maintenance personnel.
KAQG91511-E	There is not enough memory.	Memory allocation failed. (O) Wait a while, and then retry the operation. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQG91512-E	An internal error occurred.	An internal error occurred during processing. (O) Acquire all the log data, and then contact maintenance personnel.
KAQG91513-E	The specified file does not exist.	The specified file does not exist, or a non-UTF-8, multi-byte character was specified. (O)

Message ID	Message	Description and Action
		If a non-UTF-8, multi-byte character is used in a file path, convert the file path to UTF-8.
KAQG91515-E	The specified file is not a regular file.	The specified file is not a regular file. (O) No action is necessary.
KAQG91517-E	The file size is outside the valid range for single instancing.	The file size is outside the valid range for single instancing. (O) No action is necessary.
KAQG91518-E	The file system is full.	The file system is full. (O) Delete any unnecessary data on the file system or increase the capacity of the file system.
KAQG91519-E	An attempt to update a system file failed.	A problem might exist in processing for the OS disk, virtual server OS LU, or system file. (O) Wait a while, and then retry the operation. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQG91520-E	The file path is too long.	The specified file path exceeds 4,095 bytes. (O) Specify a file path that does not exceed 4,095 bytes.
KAQG91521-E	The file cannot be single instanced because single instancing has already been canceled once for the file.	Files for which single instancing has already been canceled once cannot be single instanced. (O) No action is necessary.
KAQG91522-E	The specified file could not be single instanced because it is currently being accessed.	The specified file could not be single instanced because it is currently being accessed. (O) No action is necessary because processing will be performed the next time the policy is executed.
KAQG91701-E	The specified file system cannot be set because it supports 64-bit inodes.	The specified file system is set to support 64-bit inodes. (O) Check the specified file system settings.

Message ID	Message	Description and Action
KAQG91702-E	The specified file system cannot be set because it supports 64-bit inodes the next time the system is mounted.	The specified file system is set to support 64-bit inodes the next time the system is mounted. (O) Check the specified file system settings.
KAQG91703-E	An internal error has occurred.	An internal error has occurred. (O) Acquire all the log data, and then contact maintenance personnel.
KAQG91704-E	The specified file system cannot be set because it is a tiered file system.	The specified file system is a tiered file system. (O) Check the specified file system settings.
KAQG91801-E	The command cannot be executed because the capacity of the specified file system is less than 1 TB.	The capacity of the specified file system is less than 1 TB. (O) Check the capacity of the specified file system.
KAQG91802-E	The specified file system does not exist.	The specified file system does not exist. (O) Check the specified file system, and then try again.
KAQG91803-E	Failed to specify the settings because the capacity of the specified file system is insufficient.	The attempt to configure the specified file system failed because the capacity of the file system is insufficient. (O) Delete any unnecessary data on the file system or increase the capacity of the file system.
KAQG91804-E	The move processing was skipped because the target file (inode number) was changed.	The move processing was skipped because the target file (inode number) was changed. (O) Wait a while, and then try the operation again. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQG91805-E	The specified command cannot be executed because the fsmoveattr or fsinodespace commands are being executed.	The specified command cannot be executed because the fsmoveattr or fsinodespace commands are being executed. (O) Wait a while, and then try the operation again. If the error persists,

Message ID	Message	Description and Action
		acquire all the log data, and then contact maintenance personnel.
KAQG91806-E	The specified file system is not supported.	The specified file system is not supported. (O) Check the specified file system settings.
KAQG91808-E	The specified file system name is too long.	The specified file system name is too long. (O) Specify a file system name of the correct length, and then try again.
KAQG99000-E	There are too many or too few parameters.	There are too many or too few parameters. (O) Check the command format, specify a correct parameter, and then try again.
KAQG99001-I	Usage: <i>command-format</i>	This message displays the command format. (O) If a syntax error occurred, check the command format, and then try again.
KAQG99003-E	There are no system files or directories.	There might be a problem in the processing for either the OS disk or the system file. (O) Check the OS disk settings and whether an error exists on the OS disk. If there is no problem, acquire all of the kernel logs, and then contact maintenance personnel. See the help for details on how to acquire the kernel logs.
KAQG99004-E	An attempt to update the system file has failed.	There might be a problem in the processing for either the OS disk or the system file. (O) Check the OS disk settings and whether an error exists on the OS disk. If there is no problem, acquire all of the kernel logs, and then contact maintenance personnel. See the help for details on how to acquire the kernel logs.
KAQG99005-E	An error occurred while applying the contents of the system file to the system.	There might be a heavy load on the system or a system error might have occurred. (O)

Message ID	Message	Description and Action
		Wait a while, and then try again. If the error occurs again, acquire all of the kernel logs, and then contact maintenance personnel. See the help for details on how to acquire the kernel logs.
KAQG99006-E	An attempt to acquire system information has failed.	There might be a heavy load on the system or a system error might have occurred. (O) Wait a while, and then try again. If the error occurs again, acquire all of the kernel logs, and then contact maintenance personnel. See the help for details on how to acquire the kernel logs.
KAQG99007-E	An attempt to acquire mount information has failed.	There might be a problem in the processing for either the OS disk or the acquisition of mount information. (O) Check the OS disk settings and whether an error exists on the OS disk. If there is no problem, acquire all of the kernel logs, and then contact maintenance personnel. See the help for details on how to acquire the kernel logs.
KAQG99008-E	An attempt to access management information about the file system (<i>file-system-name</i>) has failed.	The specified file system might have a problem or contention with other processing might have occurred. (O) Wait a while, and then try again. If the error occurs again, check whether an error occurred in the specified file system. If there is no problem, acquire all of the kernel logs, and then contact maintenance personnel. See the help for details on how to acquire kernel logs. Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.
KAQG99009-E	The specified file system (<i>file-system-name</i>) is not mounted.	The specified file system (<i>file-system-name</i>) is not mounted. If multiple file systems are specified, processing will continue.

Message ID	Message	Description and Action
		(O) If the file system is not mounted, mount it or specify a correct file system name, and then try again.
KAQG99010-E	The specified file system (<i>file-system-name</i>) is invalid.	The specified file system (<i>file-system-name</i>) is invalid. If multiple file systems are specified, processing will continue. (O) Specify a correct file system name, and then try again.
KAQG99011-E	The format of the executed command is invalid.	The format of the command that was executed in the interactive mode is invalid. (O) Check the correct format and correct the invalid format, and then try again.
KAQG99012-E	An attempt to specify the settings failed because the file system (<i>file-system-name</i>) is full.	The file system (<i>file-system-name</i>) is full. If multiple file systems are specified, processing will continue. (O) Reduce the capacity used by the file system, and then try again.
KAQG99013-E	An invalid function name was specified.	The format of the command that was executed in the interactive mode is invalid. (O) Check the correct format, correct the invalid format, and then try again.
KAQG99014-E	The specified file system (<i>file-system-name</i>) is not in a normal state.	The specified file system might have a problem. (O) Check whether an error occurred in the specified file system. If there is no problem, acquire all of the kernel logs, and then contact maintenance personnel. See the help for details on how to acquire kernel logs. Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.

Message ID	Message	Description and Action
KAQG99015-E	An attempt to open the log files has failed.	There might be a problem in the log files or contention with other processing might have occurred. (O) Wait a while, and then try again. If the error occurs again, check the settings for the OS disk. If there is no problem, acquire all of the kernel logs, and then contact maintenance personnel. See the help for details on how to acquire kernel logs.
KAQG99016-E	There is an error in the specification of the <code>-o</code> option.	There is an error in the syntax of the executed command. (O) Confirm the correct syntax, correct the syntax error, and then re-execute the command.
KAQG99017-E	An attempt to specify the settings failed because the file system (<i>file-system-name</i>) is mounted with read-only permissions.	The specified file system (<i>file-system-name</i>) is mounted with read-only permissions. If multiple file systems are specified, processing will continue. (O) Remount the file system with read/write permissions, and then try again.
KAQG99018-E	An attempt to specify the settings failed because the specified directory (<i>directory-name</i>) is mounted with read-only permissions.	The specified directory (<i>directory-name</i>) is mounted with read-only permissions. If multiple file systems or directories are specified, processing will continue. (O) If the file system has been mounted with read-only permissions, remount it with read/write permissions. If the file system has already been mounted with read/write permissions, a public directory for a differential-data snapshot might have been specified. Check the specified directory, specify the correct directory, and then try again.
KAQG99019-E	There is an error in the specification of the <code>-p</code> option.	There is an error in the syntax of the executed command. (O) Confirm the correct syntax, correct the syntax error, and then re-execute the command.
KAQG99020-I	The ACL types of all files have been converted. (file system = <i>file-system-name</i>)	No action is required.

Message ID	Message	Description and Action
KAQG99021-E	An attempt to convert a file's ACL type has failed. (file system = <i>file-system-name</i>)	The specified file system might have a problem or a conflict with other processing might have occurred. (O) Try to convert the ACL type again, and then check the error message if necessary.
KAQG99023-E	An attempt to change priority has failed.	An attempt to change priority has failed. (O) Wait a while, and then try again. If the error occurs again, check whether an error occurred in the file system. If there is no problem in the file system, acquire all kernel logs, and then contact maintenance personnel. For details on how to acquire kernel logs, see Help.
KAQG99024-E	An attempt to acquire information of a file system (<i>file-system-name</i>) failed.	There might be a problem in the file system or a conflict with other processing might have occurred. (O) Wait a while, and then try again. If the error occurs again, check whether an error occurred in the file system. If there is no problem in the file system, acquire all kernel logs, and then contact maintenance personnel. For details on how to acquire kernel logs, see Help. Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.
KAQG99025-E	An attempt to convert a file's ACL type failed because the number of ACEs exceeded the maximum. (file = <i>file-name</i>)	The number of ACEs in the file might be more than 700. (O) Reduce the number of ACEs in the file, and then try again.
KAQG99026-E	An attempt to convert a file's ACL type has failed. (file system = <i>file-system-name</i>)	The specified file system might have a problem, or a conflict with other processing might have occurred. (O) Wait a while, and then try again. If the error occurs again, check whether an

Message ID	Message	Description and Action
		error occurred in the file system. If there is no problem in the file system, acquire all kernel logs, and then contact maintenance personnel. For details on how to acquire kernel logs, see Help.
KAQG99027-E	An attempt to convert the ACL type of the file has failed because the ACL type of the file system is Classic. (file system = <i>file-system-name</i>)	An attempt to convert the ACL type of the file has failed because the ACL type of the file system is Classic. (file system = <i>file-system-name</i>) (O) Set the ACL type of the file system to Advanced, and then try again.
KAQG99028-E	An attempt to give execution authority to the file has failed because the ACL type of the file system is not Classic. (file system = <i>file-system-name</i>)	An attempt to give execution authority to the file has failed because the ACL type of the file system is not Classic. (file system = <i>file-system-name</i>) (O) Specify a file system whose ACL type is Classic.
KAQG99029-E	Processing failed because another administrator was performing the same operation.	(O) Wait for the other administrator to finish, and then try again.
KAQG99030-I	Do you want to cancel the <code>fsrepair</code> command? (y / n)	This message is output before the <code>fsrepair</code> command is canceled. (O) Enter y or n.
KAQG99031-E	An attempt to specify the settings failed because the ACL type of the file system is Classic. (file system = <i>file-system-name</i>)	An attempt to specify the settings failed because the ACL type of the file system is Classic. (file system = <i>file-system-name</i>) (O) Specify a file system whose ACL type is Advanced, and then try again.
KAQG99032-W	The settings are different for each tier.	The settings displayed by the specified option are different for each file system tier. (O) Check the execution results, and execute commands so that the settings for each tier are the same.
KAQG99033-E	The specified directory (<i>directory-name</i>) is invalid.	The specified directory (<i>directory-name</i>) does not exist, or is not a subdirectory of <code>"/mnt"</code> . (O) Specify the correct directory, and then try again.

Message ID	Message	Description and Action
KAQG99034-E	<i>command failed: return-value</i>	The internally called command has failed. (O) Check whether any system error occurred. If no error occurred, acquire all of the kernel logs, and then contact maintenance personnel.
KAQG99035-E	The tiered file system could not be rolled back to Tier 1.	The rollback could not be performed because the information required to roll back to Tier 1 could not be acquired, or the rollback failed. (O) Check whether an error occurred in any tier. If an error occurred, make sure the status returns to normal and then re-execute the command. If no error occurred, acquire all log data from both nodes, and then contact maintenance personnel.
KAQG99037-E	The specified directory path is too long.	The specified directory path exceeds 4,000 bytes. (O) Specify a directory path that does not exceed 4,000 bytes, and then retry the operation.
KAQG99041-E	The specified parameter <i>parameter-name</i> is invalid.	The specified parameter is invalid. (O) Check the command format, specify a valid parameter value, and then try again.

KAQK Messages (File Services Manager Messages)

This chapter describes the meanings of the KAQK messages output by HDI systems (File Services Manager messages).

- [KAQK messages](#)

KAQK messages

This section explains messages that have a message ID beginning with KAQK, and the actions to be taken if such messages appear.

Table 4-1 KAQK messages

Message ID	Message	Description and Action
KAQK40000-E	An FC path error has occurred. (number of LUs for which errors occurred = <i>number-of-LUs-for-which-errors-occurred</i>)	<p>(S) An FC path error has occurred, or an operation was performed that changed the LU mapping configuration.</p> <p>(O) Check the statuses of the FC paths either by executing the <code>fpstatus</code> command or by viewing the FC Path sub tab under the Network tab in the Health Monitor subwindow. If an FC status is something other than Online, then an error might have occurred. Resolve the problem by following the FC path recovery procedure in online Help. If the FC paths are all in the Online status, then no action is required.</p> <p>Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.</p> <p>Depending on your environment, the number of LUs displayed in the message might not be the actual number of LUs.</p>
KAQK40001-E	Errors have occurred on all the FC paths. (number of LUs for which errors occurred = <i>number-of-LUs-for-which-errors-occurred, maintenance-information</i>)	<p>(S) Errors have occurred on all the FC paths connected to the LUs, or an operation was performed that changed the LU mapping configuration.</p> <p>(O) Check the statuses of the FC paths either by executing the <code>fpstatus</code> command or by viewing the FC Path sub tab under the Network tab in the Health Monitor subwindow. If all of the FC statuses are something other than Online, then errors might have occurred on all the FC paths. Resolve the problem by following the FC path recovery procedure in online Help. If</p>

KAQM01 messages

This section explains messages that have a message ID beginning with KAQM01, and the actions to be taken if such messages appear.

Table 5-1 KAQM01 messages

Message ID	Message	Description and Action
KAQM01001-E	An attempt to start the File Services Manager program failed.	A problem may exist in the communication control processing. (O) Acquire all the Management log files, and then inform maintenance personnel if this error message continues to be output. See the help for a list of the Management log files.
KAQM01002-E	An attempt to accept a connection request for the File Services Manager program failed.	A problem may exist in the communication control processing. (O) Acquire all the Management log files and then inform maintenance personnel if this error message continues to be output. See the help for a list of Management log files.
KAQM01003-I	The File Services Manager program started.	The File Services Manager program started successfully. (O) No action is required.
KAQM01004-I	The File Services Manager program stopped.	The File Services Manager program was stopped. (O) No action is required.
KAQM01005-E	A timeout occurred during reception of communication control processing. (source IP address = <i>source-IP-address</i> , source port number = <i>source-port-number</i> , destination port number = <i>destination-port-number</i>)	An unrecognizable request was detected. There might be a problem in the network traffic. (O) Check the following at the <i>source-IP-address</i> machine: <ul style="list-style-type: none"> • Whether an error message has been output to a log of the active communication programs. • Whether a connection to <i>destination-port-number</i> was incorrectly established due to an error in the communication program settings. • Whether a user is incorrectly attempting to execute a program such as telnet or a Web browser by specifying <i>destination-port-number</i>.

Message ID	Message	Description and Action
		<p><i>destination-port-number</i> cannot be used to connect from programs other than a dedicated program.</p> <p>If there are no errors in the destination port settings of the communication programs, and there are no users attempting to connect to <i>destination-port-number</i>, acquire all the Management log files, and then contact maintenance personnel. For a list of the Management log files, see help.</p>
KAQM01006-E	<p>An attempt to receive communication control processing has failed. (source IP address = <i>source-IP-address</i>, source port number = <i>source-port-number</i>, destination port number = <i>destination-port-number</i>)</p>	<p>An unrecognizable request was detected. There might be a problem in the network traffic.</p> <p>(O)</p> <p>Check the following at the <i>source-IP-address</i> machine:</p> <ul style="list-style-type: none"> • Whether an error message has been output to a log of the active communication programs. • Whether a connection to <i>destination-port-number</i> was incorrectly established due to an error in the communication program settings. • Whether a user is incorrectly attempting to execute a program such as telnet or a Web browser by specifying <i>destination-port-number</i>. <p><i>destination-port-number</i> cannot be used to connect from programs other than a dedicated program.</p> <p>If there are no errors in the destination port settings of the communication programs, and there are no users attempting to connect to <i>destination-port-number</i>, acquire all the Management log files, and then contact maintenance personnel. For a list of the Management log files, see help.</p>
KAQM01007-E	<p>An attempt to send the response message failed. (protocol version=<i>protocol-version</i>, destination type=<i>destination-type</i>)</p>	<p>The transmission of the response message to the client process failed.</p> <p>(O)</p> <p>Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.</p>

Message ID	Message	Description and Action
KAQM01008-E	The request message is invalid. (protocol version= <i>protocol-version</i> , destination type= <i>destination-type</i>)	The request message from the client process does not conform to the protocol. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM01009-E	The data type of the request message is invalid. (protocol version= <i>protocol-version</i> , destination type= <i>destination-type</i>)	The data type included in the request message from the client process does not conform to the protocol. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM01010-E	An unexpected error occurred in the request receipt processing. (protocol version= <i>protocol-version</i> , destination type= <i>destination-type</i> , error details= <i>error-details</i>)	The unexpected error shown in (error details) occurred during the execution of processing according to the request message from the client process. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM01011-E	The detailed data type of request message is invalid. (protocol version= <i>protocol-version</i> , destination type= <i>destination-type</i> , data type= <i>data-type</i>)	The detailed data type included in the request message from the client process does not conform to the protocol. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM01012-E	The result of request receipt processing is invalid. (protocol version= <i>protocol-version</i> , destination type= <i>destination-type</i> , data type= <i>data-type</i>)	The execution result of the processing according to the request message from the client process does not conform to the protocol. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM01013-E	The header of the request message is invalid.	The header of the request message from the client process does not conform to the protocol. (O)

Message ID	Message	Description and Action
		Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM01014-E	An unexpected error occurred in the request message analysis processing. (error details= <i>error-details</i>)	The unexpected error shown in (error details) occurred during the analyzing of the request message from the client process. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM01015-E	The ID of the request message is invalid.	The ID of the request message from the client process does not conform to the protocol. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM01016-E	The destination type of the request message is invalid. (protocol version= <i>protocol-version</i> , destination type= <i>destination-type</i>)	The destination type of the request message from the process on the client does not conform to the protocol. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM01017-E	The version of request message is invalid. (protocol version= <i>protocol-version</i> , destination type= <i>destination-type</i>)	The version of the request message from the process on the client does not conform to the protocol. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM01018-E	An error exists in the data received during communication control processing. (source IP address = <i>source-IP-address</i> , source port number = <i>source-port-number</i> , destination port number = <i>destination-port-number</i>)	An unrecognizable request was detected. There might be a problem in the network traffic. (O) Check the following at the <i>source-IP-address</i> machine: <ul style="list-style-type: none"> • Whether an error message has been output to a log of the active communication programs. • Whether a connection to <i>destination-port-number</i> was incorrectly established due to an

Message ID	Message	Description and Action
		<p>error in the communication program settings.</p> <ul style="list-style-type: none"> Whether a user is incorrectly attempting to execute a program such as telnet or a Web browser by specifying <i>destination-port-number</i>. <p><i>destination-port-number</i> cannot be used to connect from programs other than a dedicated program.</p> <p>If there are no errors in the destination port settings of the communication programs, and there are no users attempting to connect to <i>destination-port-number</i>, acquire all the Management log files, and then contact maintenance personnel. For a list of the Management log files, see help.</p>
KAQM01019-E	An unexpected error occurred in the internal processing of the communication control processing.	<p>File Services Manager has not been installed, or there might be a problem in internal processing.</p> <p>(O)</p> <p>If File Services Manager has not been installed, install it. If this message is output even though File Services Manager has been installed, acquire all the Management log files and contact maintenance personnel. See the help for a list of Management log files.</p>
KAQM01020-E	The transmission processing of the communication control processing failed.	<p>A problem may exist in the network traffic.</p> <p>(O)</p> <p>Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.</p>
KAQM01022-E	The information about the program to be installed cannot be acquired.	<p>A problem may exist in the system file processing.</p> <p>(O)</p> <p>Check whether the specified file is correct, and then retry. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.</p>
KAQM01024-E	A version earlier than the already installed version cannot be installed. (The specified version= <i>version</i>)	<p>The specified version of the program is earlier than the installed version.</p> <p>(O)</p>

Message ID	Message	Description and Action
		Please install a program version that is a later version of, or the same version as, the already installed version.
KAQM01025-E	An attempt to install the program failed.	The system may be busy. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM01026-E	An attempt to install the program failed.	A problem may exist in the processing of the program information or program management file. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM01027-W	The specified program is a patch version. The patch version cannot be deleted alone.	The patch version of the program cannot be deleted alone. (O) When you delete the regular version or corrected version of a program, the patch version is also deleted. Delete the regular version or corrected version to delete the patch version.
KAQM01028-E	Internal processing failed.	A problem may exist in the processing of the program management file, the OS disk or the system file. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM01030-E	Uninstallation of the program failed.	The system may be busy. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM01031-E	Uninstallation of the program failed.	There might be a problem in the processing of a program management file. (O) Retry execution. Acquire all the Management log files if this error

Message ID	Message	Description and Action
		occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM01032-E	An attempt to acquire management information (<i>file-name</i>) for uninstallation has failed.	There might be a problem in the processing of a program management file. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM01033-E	Acquisition of the program information list failed.	There might be a problem in the processing of a program management file or in the processing to acquire license information. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM01035-E	Internal processing failed.	A problem might exist in the cluster management LU or the system file. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM01038-E	Acquisition of the usage rate of the OS disk or the virtual server OS LU failed.	The system may be busy. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM01039-E	The setting of the license failed.	There might be a problem in the processing to set licenses. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM01041-E	An invalid license key was entered.	A license key was entered that was issued before the registered license, or the license key information is incorrect. (O)

Message ID	Message	Description and Action
		If the license is already registered, no action needs to be taken. If the license is not registered, check whether the license key you entered is correct, and if it is not, try again with the correct key. If the error occurs again, acquire all management log files and the license key for which registration failed, and inform maintenance personnel.
KAQM01043-W	The File Services Manager program suppressed the message output. (suppressed message ID= <i>suppressed-message-ID</i>)	A problem may exist in the network traffic. (O) Acquire all the Management log files if this warning message continues to be output, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM01045-E	The setting of the license failed.	A temporary license can be used only once. (O) Check whether the entered license key is correct or not, and retry with the correct key. Acquire all the Management log files and the license key that failed the setup if the error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM01046-E	The setting of the license failed.	After using a permanent license, a temporary license or an emergency license cannot be used. (O) Check whether the entered license key is correct or not, and retry with the correct key. Acquire all the Management log files and the license key that failed the setup if the error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM01047-E	The setting of the license failed.	After using an emergency license, a temporary license cannot be used. (O) Check whether the entered license key is correct or not, and retry with the correct key. Acquire all the Management log files and the license key that failed the setup if the error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.

Message ID	Message	Description and Action
KAQM01048-E	The program is not specified.	The program is not specified. (O) Specify a program and retry.
KAQM01053-E	Uploading of the program to be installed failed.	Internal processing failed. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM01055-E	Uploading of the program to be installed failed.	The capacity of OS disk for installing the program exceeds the restriction. (O) Delete unnecessary dump files or log files and retry.
KAQM01056-E	An attempt to acquire the program name and version of the program to be installed failed.	The specified program installation path is invalid, the specified file is not a program package, or the system may be busy. (O) Confirm that the correct program package is specified, and then re-execute. Acquire all the Management log files if this error occurs again, and inform maintenance personnel.
KAQM01057-E	A program is not selected.	A program is not selected, so execution cannot start. (O) Retry after selecting a program.
KAQM01058-E	The length of path to install program (<i>path-to-install-program</i>) exceeds the range.	The length of the path to the install program is not within the valid range. (O) Use from 1 to 512 bytes to enter the path to the install program.
KAQM01059-E	An attempt to install the program failed.	The prerequisite conditions for installing the program are not satisfied. (O) Satisfy the prerequisite conditions for installation, and then install the program. Acquire all the Management log files if this error occurs even though the prerequisite conditions are satisfied, and inform maintenance personnel. See the help for a list of the Management log files.

Message ID	Message	Description and Action
KAQM01060-E	An attempt to install the program failed.	The specified program is a patch version. A patch version of the program can only be installed when a regular version or corrected version of the program is already installed. (O) Install the regular version or corrected version of the program, and then retry. Acquire all the Management log files if this error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM01063-E	An attempt to set up the management information (<i>management-information</i>) for uninstallation has failed.	There might be a problem in the processing of a program management file. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM01064-E	An invalid license key was entered.	The entered license key is not a license key for the installed product. (O) Acquire the product name and the license key that failed to be set, and then contact the support center.
KAQM01067-E	Internal processing failed.	The system may be busy. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM01073-W	Uninstallation of the program failed.	The specified program is a necessary program. A necessary program cannot be uninstalled. (O) Check whether the specified program is correct, and then retry. Acquire all the Management log files if this error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM01078-E	The setting of the license failed.	Internal processing failed. (O)

Message ID	Message	Description and Action
		Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM01079-E	The setting of the license failed.	The specified program is not an optional program. (O) Specify an optional program, and then retry.
KAQM01080-E	The specified path to the license key file is invalid.	The specified file does not exist or the file is empty. (O) Enter the valid path to the license key file and retry the operation.
KAQM01087-E	Uninstallation of the program failed.	Internal processing failed. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM01089-E	An invalid license key file was entered.	The entered file is not in a license key file format. (O) Make sure that the entered file is a license key file, and then re-execute. If the error occurs again, acquire all the Management log files and the license key file for which setup failed, and then contact maintenance personnel. See Help for a list of Management log files.
KAQM01090-E	An invalid license key file was entered.	The license key file information is incorrect. (O) Make sure that the entered license key file has a system serial number and that it is targeting a program of the system, and then re-execute. If the error occurs again, acquire all the Management log files and the license key file for which setup failed, and then contact maintenance personnel. See Help for a list of Management log files.
KAQM01091-E	An attempt to acquire license information has failed.	There might be a problem in the processing to acquire license information.

Message ID	Message	Description and Action
		(O) Wait a while, and then try again. If the error occurs again, acquire all the Management log files, and then contact maintenance personnel. For details about the list of Management log files, see Help.
KAQM01092-E	An attempt to acquire the program name and version of the program to be installed has failed.	A problem may exist in the processing of the program information or program management file. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM01093-E	The specified program cannot be installed.	A system error might have occurred. (O) Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM01094-E	The specified program cannot be installed.	Conditions required to install the program are not satisfied. (O) Satisfy the conditions required to install the program, and then install it. If this error occurs even though the conditions have been satisfied, acquire all the Management log files, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM01095-E	The specified program cannot be installed.	The specified program is a patch version. An installed patch version program cannot be reinstalled. (O) None.
KAQM01096-I	An attempt to install Primary Server Base succeeded.	None. (O) None.
KAQM01097-E	An attempt to install Primary Server Base failed.	The system might be busy. (O) An error might have occurred in Primary Server Base. Refer to the troubleshooting information in the help, and then resolve the error with the help of maintenance personnel.

Message ID	Message	Description and Action
KAQM01099-E	The setting of the license failed.	There might be a problem in the processing to set licenses. (O) Reboot the OS. If this message is output again, acquire all the Management log files, and then contact the Support Center. See Help for a list of the Management log files.
KAQM01100-E	The specified license key file doesn't exist.	The specified license key file doesn't exist. (O) Please execute it again after storing the license key file.
KAQM01101-W	It failed in the acquisition of information after it had set it though the license was set.	There might be a problem in processing to acquire license information though the license was set. (O) Please confirm license information. If the error occurs again, acquire all the Management log files, and then contact maintenance personnel. For details about the list of Management log files, see Help.
KAQM01102-E	The node has not yet stopped.	The node is not in the INACTIVE status. (O) Make sure that the node is in the INACTIVE status, and then retry the operation.
KAQM01103-E	The command was executed in a non-cluster configuration.	A cluster configuration has not been defined. (O) Define a cluster configuration.
KAQM01105-E	An invalid installation file was specified.	The specified file is not in the format of an installation file. (O) Make sure that the specified file is an installation file, and then retry the operation. If the error occurs again, acquire all the Management log files and the installation file for which the setup failed, and then contact maintenance personnel. See online Help for a list of Management log files.
KAQM01106-E	An attempt to write to an installation file has failed.	An unexpected error occurred while writing a to file. (O)

Message ID	Message	Description and Action
		Acquire all the Management log files, and then contact maintenance personnel. See online Help for a list of the Management log files.
KAQM01107-E	An attempt to extract an installation file has failed.	An unexpected error occurred while extracting an installation file. (O) Acquire all the Management log files, and then contact maintenance personnel. See online Help for a list of the Management log files.
KAQM01108-Q	Do you want to delete the <i>license-name</i> license ? (y/n)	This confirmation message appears before a license is deleted. (O) Enter y or n.
KAQM01109-W	An attempt to check whether the licenses on the nodes are the same has failed.	There might be a problem with the processing that checks whether licenses on nodes are the same. (O) Acquire all management log files, and then inform maintenance personnel. For a list of management log files, see the Help.
KAQM01110-W	The license <i>license-name</i> on one node in the cluster does not match the license on the other node.	The license on one node in the cluster does not match the license on the other node. (O) Check the licenses on both nodes, and make sure that they match.
KAQM01111-W	The capacities licensed by the <i>the-name-of-the-license-whose-capacities-do-not-match-within-the-cluster</i> license do not match within the cluster.	Licensed capacities do not match among the nodes in the cluster. (O) Check the license on both nodes, and set the capacities so that they match.
KAQM01112-E	The specified license (<i>license-name-that-cannot-be-set</i>) is already set.	The specified license is already set. (O) Check the settings of the specified license, check that the entered license key is the correct one, and then retry the operation.
KAQM01113-E	An attempt to resolve the host name of HCP failed.	Name resolution could not be properly performed. Communication with an HCP system might be temporarily disabled, due to a problem such as a network error or a high load on the HCP system. (O)

Message ID	Message	Description and Action
		Wait a while, and then retry the operation. If the problem persists, confirm that a network environment is set up in which name resolution can be performed. Also, see the online Help troubleshooting section. After that, use the Configuration Wizard to test the connection.
KAQM01114-E	An attempt to connect to HCP failed.	There might be a problem with the HCP system or the network. (O) Use the online Help troubleshooting section to identify the cause of the error. Remove the cause of the error, and then retry the operation. If the problem persists, acquire all the log data, and then contact maintenance personnel.
KAQM01115-E	A timeout occurred during communication with HCP.	There might be a problem with the HCP system or the network. (O) Use the online Help troubleshooting section to identify the cause of the error. Remove the cause of the error, and then retry the operation. If the problem persists, acquire all the log data, and then contact maintenance personnel.
KAQM01116-E	An attempt to establish SSL communication with HCP failed.	An attempt to establish SSL communication with HCP failed. (O) Check the settings of SSL on HCP and the status of the network, fix the cause of the error, and then retry the operation. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM01117-E	Communication with HCP failed.	An error occurred during communication with HCP. (O) Check the network status, and then try again. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM01118-E	The namespace in which the installation file was registered cannot be accessed.	The namespace in which the installation file was registered does not exist, or the tenant or namespace settings in HCP might be incorrect. (O)

Message ID	Message	Description and Action
		Check with the HCP administrator whether the settings of the tenant and of the namespace in which the installation file was registered are correct. Then, use the Service Configuration Wizard to test the connection.
KAQM01119-E	No installation file is registered in HCP.	Updates cannot be installed because no installation file is registered in HCP. (O) Ask the HCP administrator to register an installation file.
KAQM01120-E	No license that allows linkage with HCP is set.	The operation cannot be performed because no license that allows linkage with HCP is set. (O) Please set a license.
KAQM01121-E	The downloaded installation file cannot be installed because it is for a product that is not currently installed. (installed product = <i>name-of-the-installed-product</i> , product you are attempting to install = <i>name-of-the-product-that-you-are-attempting-to-install</i>)	The installation file that is registered in HCP is for a product that is not currently installed. (O) Check with the HCP administrator whether the registered installation file is the correct file.
KAQM01122-E	Acquisition of the metadata of the installation file that is registered in HCP failed.	Information about the installation file could not be correctly acquired because the metadata of the installation file that is registered in HCP is in an invalid format. (O) Check with the HCP administrator whether the metadata settings of the installation file are correct. If you cannot identify a problem, execute the operation again. If the error occurs again, collect all the log data, and then contact maintenance personnel.
KAQM01123-E	Extraction of the installation file failed.	An unexpected error occurred during extraction of the downloaded installation file. (O) Check with the HCP administrator whether the registered installation file is valid.
KAQM01124-E	Download of the installation file failed.	The download was interrupted because a file that is required for processing is missing. Installation processing might already have been performed.

Message ID	Message	Description and Action
		(O) Confirm that another system administrator is not installing an update, and then retry the operation. If the error occurs again, collect all the log data, and then contact maintenance personnel.
KAQM01125-E	The operation was interrupted because another system administrator is currently installing an update.	An update is currently being installed by another system administrator. (O) Wait a few minutes, and then check the system version, and if necessary, retry the operation. If the error occurs again, collect all the log data, and then contact maintenance personnel.
KAQM01126-E	HCP information has not been configured.	HCP information has not been configured. (O) Use the Service Setting Wizard to configure HCP information, and then retry the operation.
KAQM01127-E	Download of the installation file failed.	During the download of the installation file, the system disk ran out of free space. Either the installation file or the installation file metadata on HCP might be incorrect. (O) Check with the HCP administrator whether the installation file that is registered in HCP and the metadata settings are valid. If you cannot identify a problem, retry the operation. If the error occurs again, collect all the log data, and then contact maintenance personnel.

KAQM04 messages

This section explains messages that have a message ID beginning with KAQM04, and the actions to be taken if such messages appear.

Table 5-2 KAQM04 messages

Message ID	Message	Description and Action
KAQM04004-E	The file system has not used a volume manager.	The volume manager is not used, so the file system cannot be expanded. (O)

Message ID	Message	Description and Action
		Specify the file system that is using a volume manager, and then try again.
KAQM04006-E	The input file system name (<i>file-system-name</i>) is duplicated.	A file system with the same name already exists. (O) Enter a different file system name.
KAQM04007-E	The total disk capacity of the specified device files exceeds the maximum capacity.	The total disk capacity of the specified device files exceeds the maximum capacity. (O) Specify device files whose total disk capacity is less than the maximum capacity. For information on file system capacity, see Help.
KAQM04008-E	Even though <code>-v do_not_use</code> has been specified, multiple device files have been specified.	When not using a volume manager, multiple device files cannot be specified. (O) Specify only one device file, and then try again.
KAQM04009-E	The number of file systems has already reached the maximum number.	An attempt was made to create a number of file systems exceeding the maximum. (O) Delete an unnecessary file system and retry. See the help for the maximum number of file systems.
KAQM04010-E	The specified file system does not exist in the operating node or the virtual server.	The specified file system does not exist in the operating node or the virtual server. (O) In List of File Systems, check that the file system name is correct, and then retry the operation.
KAQM04011-E	The file system creation failed because of an unexpected error in internal processing.	A problem may exist in the creation processing of a file system. (O) Acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files. Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email

Message ID	Message	Description and Action
		notifications, and if there is a problem, take action according to the instructions in online Help.
KAQM04012-E	The mount editing failed because of an unexpected error in internal processing.	<p>A problem may exist in mount editing processing of a file system.</p> <p>(O)</p> <p>Acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files.</p> <p>Supplementary note:</p> <p>This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.</p>
KAQM04013-E	The file system expansion failed.	<p>A problem might exist in expansion processing of a file system.</p> <p>(O)</p> <p>Acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files.</p> <p>Supplementary note:</p> <p>This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.</p>
KAQM04014-E	The deletion of the file system could not be completed because an unexpected error occurred during internal processing. The automatic recovery processing might also have failed. However, the file system will be deleted from List of File Systems.	<p>A problem may exist in the deletion processing of a file system.</p> <p>(O)</p> <p>Acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files.</p> <p>Supplementary note:</p> <p>This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.</p>

Message ID	Message	Description and Action
KAQM04015-E	A CIFS file share exists, so unmounting is not possible.	The unmounting of a file system with a setting of CIFS file share cannot be performed. (O) Delete the CIFS file share, and then retry unmounting of the file system.
KAQM04016-E	An NFS file share exists, so unmounting is not possible.	The unmounting of a file system with a setting of NFS file share cannot be performed. (O) Delete the NFS file share, and then retry unmounting of the file system.
KAQM04017-E	An attempt to judge whether a CIFS file share exists has failed.	There is a possibility that a problem may be in existence judging processing of CIFS file share. (O) Acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files.
KAQM04018-E	An attempt to judge whether an NFS file share exists has failed.	There is a possibility that a problem may be in existence judging processing of NFS file share. (O) Acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files.
KAQM04019-E	The file system is mounting, so deleting cannot be performed.	A mounted file system cannot be deleted. (O) Retry deletion of the file system after unmounting.
KAQM04022-E	An attempt to connect to a device file has failed.	An error occurred in accessing the device file. (O) Execute the <code>fpstatus</code> command on both nodes, check the connection statuses of the specified device files on both nodes, and then retry the operation. If you are using local data encryption, check the system messages on both nodes to see whether the KAQM05256-E message, or a message ranging from KAQM05258-E to KAQM05264-E was output during OS startup. If an error occurred, take action as described in

Message ID	Message	Description and Action
		<p>the error message, and then retry the operation. If an error occurs again, acquire all the log data, and then contact maintenance personnel.</p> <p>Supplementary note:</p> <p>This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.</p>
KAQM04023-E	Information acquisition of a device file failed because of an unexpected error in internal processing.	<p>A problem may exist in the information acquisition processing of a device file.</p> <p>(O)</p> <p>Acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files.</p>
KAQM04024-E	An attempt to access the cluster management LU or the system file has failed.	<p>An attempt to access the cluster management LU or the system file has failed.</p> <p>(O)</p> <p>Acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files.</p>
KAQM04025-E	An attempt to access the cluster management LU or the system file has failed.	<p>Acquisition of device file information from the cluster management LU or the system file has failed.</p> <p>(O)</p> <p>Acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files.</p>
KAQM04026-E	An attempt to access the cluster management LU or the system file has failed.	<p>An attempt to update the device file information in the cluster management LU or the system file has failed.</p> <p>(O)</p> <p>Acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files.</p>
KAQM04027-E	An attempt to access the cluster management LU or the system file has failed.	<p>Acquisition of file system information from the cluster management LU or the system file has failed.</p> <p>(O)</p> <p>Acquire all the Management log files and inform maintenance personnel.</p>

Message ID	Message	Description and Action
		See the help for a list of the Management log files.
KAQM04028-E	An attempt to access the cluster management LU or the system file has failed.	An attempt to update the file system information in the cluster management LU or the system file has failed. (O) Acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files.
KAQM04029-E	An attempt to access the cluster management LU or the system file has failed.	Deletion of file system information from the cluster management LU or the system file has failed. (O) Acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files.
KAQM04030-E	An attempt to access the cluster management LU or the system file has failed.	Acquisition of the number of file system information items in the cluster management LU or the system file has failed. (O) Acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files.
KAQM04031-E	A conflict with another system administrator's operation or an internal error may have occurred.	A conflict with another system administrator's operation or system error may have occurred. (O) Retry. Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM04032-E	The division size (<i>file-system-division-size</i>) specified for the file system is larger than the file system capacity (<i>file-system-capacity</i>).	A file system division size that exceeds the file system capacity has been specified. (O) Specify a file system division size that is equal to or less than the file system capacity, and then try again.
KAQM04033-E	Execution is not possible because the resource group or virtual server is not operating normally or a resource has been blocked.	Execution is not possible because the resource group or virtual server is not operating normally or a resource has been blocked. (O)

Message ID	Message	Description and Action
		Check the status of the resource group or virtual server, and then retry the operation. If no status problems exist, see the message KAQG72006-E in the Help.
KAQM04034-E	Resource group or virtual server information could not be acquired.	A problem may exist in the internal processing. (O) Acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files.
KAQM04037-E	The specified device file is being used by another file system.	The specified device file cannot be used because it is being used by another file system. (O) Specify a different device file, and then try again.
KAQM04038-E	The specified file system is blocked.	The specified file system or the device file being used by the file system is blocked. (O) Follow troubleshooting in the help to check the file system and device file error information in the List of File Systems, and then recover the error with maintenance personnel. Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.
KAQM04039-E	An attempt to register resource information failed.	A problem may exist in the internal processing. (O) Acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files.
KAQM04040-E	Deletion of resource information has failed, either because the node or virtual server is not operating normally or because an internal processing problem exists.	The node or virtual server might not be running properly, there might be a problem with internal processing, or command execution might have failed due to a temporary error on the heartbeat LAN. (O)

Message ID	Message	Description and Action
		Check the status of the cluster, node, resource group, and virtual server, verify that no errors have occurred on the heartbeat LAN, and then retry the operation. If the problem cannot be resolved, acquire all the log data, and then contact maintenance personnel.
KAQM04041-W	The file system is mounted with the Quota setting disabled because the file system is full.	If an attempt is made to mount a file system that is full with the Quota setting enabled, the file system will be mounted with the Quota setting disabled. (O) Delete unnecessary data on the file system or increase the capacity of the file system, and then retry mounting with the Quota setting enabled.
KAQM04042-E	File system functions cannot be used because the resource group or virtual server is not operating normally.	The resource group or virtual server is not operating normally. (O) Check the cluster, node, and resource group status or the virtual server status, and then try again.
KAQM04043-E	An attempt to create a file system failed.	The specified device file may be invalid. (O) Make sure the specified device file is valid. Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.
KAQM04044-E	The operation cannot be performed because the file snapshot functionality is being used.	File Services Manager cannot manage a file system being used by the file snapshot functionality. (O) Execute the operation from the file snapshot functionality.
KAQM04045-E	The operation is not possible because functionality for linking with array volume replication functions of Backup Restore is using the file system.	File Services Manager cannot use a file system in use by functionality for linking with array volume replication functions of Backup Restore. (O) Wait until functionality for linking with array volume replication functions of

Message ID	Message	Description and Action
		Backup Restore is finished, and then retry execution.
KAQM04046-E	The number of file systems using the volume manager has already reached the maximum number.	An attempt was made to create more than the maximum number of file systems using a volume manager. (O) Delete unnecessary file systems using the volume manager, and then retry. See the help for the maximum number of file systems that can use a volume manager.
KAQM04047-E	An error exists in the combination of the device file (<code>dev_name</code>), division size (<code>-d agsize</code>), and log size (<code>-l logsize</code>).	An error exists in the combination of the device file (<code>dev_name</code>), division size (<code>-d agsize</code>), and log size (<code>-l logsize</code>). (O) Specify correct parameters, as described in Help.
KAQM04048-E	An error was detected while accessing the specified device file.	An error was detected while accessing the specified device file. (O) Check the specified device files, and then try again. If this error occurs repeatedly, acquire all the Management log files and contact maintenance personnel. See the help file for a list of the Management log files. Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.
KAQM04049-E	The specified device file does not exist, or the size of the LU allocated to the virtual server was changed.	The specified device file does not exist, or the size of the LU allocated to the virtual server was changed. (O) Verify the specified device file, and then retry the operation. If the size of the LU allocated to the virtual server was changed, use the <code>vnaslurelease</code> command to release the LU, execute the <code>fpstatus</code> command on both nodes, check the status of the specified LU on both nodes, and then

Message ID	Message	Description and Action
		use the <code>vnasluassign</code> command to reallocate the LU.
KAQM04050-E	The specified file system is already mounted.	The specified file system is already mounted. (O) In List of File Systems, check the mount status of the specified file system.
KAQM04051-E	The specified file system is already unmounted.	The specified file system is already unmounted. (O) In List of File Systems, check the mount status of the specified file system.
KAQM04052-E	The operation cannot be performed because the specified file system (<i>file-system-name</i>) is defined by the other node in the cluster.	The operation cannot be performed because the specified file system is defined by the other node in the cluster. (O) On the other node of the cluster, perform the operation for the specified file system.
KAQM04053-E	The maximum number of logical volumes has already been reached.	The file system operation cannot be performed because the maximum number of logical volumes has been reached. (O) Delete any unnecessary file systems or release any unnecessary differential-data storage devices. For details about the maximum number of logical volumes, see online Help.
KAQM04055-E	An extendible size could not be acquired.	There might be a problem in the processing to acquire an extendible size. (O) Acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files.
KAQM04056-E	The capacity of the differential-data storage device is insufficient.	This operation cannot be performed because the capacity of the differential-data storage device is insufficient. (O) Resolve the problem by using file snapshot functionality operations. For details on the operation, see the help.

Message ID	Message	Description and Action
KAQM04057-E	The file snapshot functionality has not been installed.	This operation cannot be performed because the file snapshot functionality has not been installed. (O) To perform this operation on the specified differential-data snapshot, first install the file snapshot functionality.
KAQM04058-E	At least one of the selected device files is less than 160 MB.	At least one of the selected device files for file system expansion is less than 160 MB. (O) When expanding a file system, select device files that are 160 MB or more.
KAQM04063-E	When using volume manager, the size of each selected device file must be no less than 65 MB.	A specified device file is less than 65 MB. (O) When using volume manager, a device file must be no less than 65 MB.
KAQM04064-E	The capacity for creating the file system is too small.	The total disk capacity of the specified device files is too low to create the file system. (O) Specify device files that satisfy the conditions for creating the file system. See the help for information on the capacity needed to create a file system.
KAQM04065-E	The operation cannot be performed because the resource group to which the specified file system (<i>specified-file-system-name</i>) belongs is active on the other node in the cluster.	The operation can be performed on the node where the resource group to which the specified file system belongs is active. (O) Perform the operation on the node where the resource group is active, or move the resource group and then perform the operation.
KAQM04067-E	The specified resource group does not exist in the cluster.	A resource group that does not exist in the cluster is specified. (O) Check the resource group name, and then try again.
KAQM04068-E	The resource group for which you tried to register file system information is active on the other node in the cluster.	File system creation is possible on the node on which the resource group that is managing the file system information is active. (O)

Message ID	Message	Description and Action
		Perform the operation on the node where the resource group is active, or move the resource group and then perform the operation.
KAQM04070-E	The operation on the file system cannot be performed because HFRR is currently using the file system.	File Services Manager cannot manage a file system being used by HFRR. (O) Release the HFRR pair or remove the setting that specifies the file system as a file system used for making the latest differential-data snapshots visible, and then try again.
KAQM04071-E	The specified device files do not satisfy the conditions for striping.	The number of specified device files is incorrect, or the specified device files are not the same size. (O) Check the specified device files and the striping settings, and then try again.
KAQM04072-E	Device files of two or more storage systems were specified.	Device files of two or more storage systems were specified. (O) Specify device files of one storage system, and then try again.
KAQM04073-E	The specified number of device files has exceeded the maximum.	The specified number of device files has exceeded the maximum. (O) Check the number of device files, and then retry.
KAQM04074-E	The specified device file name (<i>specified-device-file-name</i>) is invalid.	There is a mistake in the specified device file name. (O) Specify the correct device file name, and then retry.
KAQM04075-E	The storage system of a specified device file is different from the storage system of the device files that make up the file system.	The storage system of a specified device file is different from the storage system of the device files that make up the file system. (O) Make sure that the storage system of each specified device file is the same as the storage system of the device files that make up the file system, and then try again.
KAQM04076-W	The currently used i-node capacity was set as the maximum capacity, because a value smaller than the	If a value smaller than the currently used i-node capacity is specified as the maximum capacity, the currently used i-node capacity is set as the maximum capacity.

Message ID	Message	Description and Action
	currently used i-node capacity was specified as the maximum capacity.	(O) If you want to decrease the percentage of the maximum capacity that is usable as the i-node capacity, expand the capacity of the file system.
KAQM04078-E	The file system is being blocked because there is not enough space on the differential-data storage device, or there might be a problem with the differential-data storage device.	The operation cannot be performed because either the file system is being blocked because there is not enough space on the differential-data storage device, or there might be a problem with the differential-data storage device. (O) Check the status of the file system and differential-data storage device, and then take appropriate action depending on the status. Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.
KAQM04079-E	The specified file system name (<i>file-system-name</i>) is already being used by the file snapshot functionality or HFRR.	You cannot use the specified name as the name of the newly defined file system because the file snapshot functionality or HFRR is already using that name. (O) Specify a new file system name, and then retry.
KAQM04080-E	The specified device file (<i>device-file-name</i>) is already being used by another node.	You cannot specify a device file that is already being used by another node. (O) Check the specified device file number, and then retry.
KAQM04082-E	The file system contained in the specified device file could not be recognized.	The file system contained in the specified device file could not be recognized. You might be using the local data encryption functionality, or a mistake might have been made in an operation procedure or in the specified device file. (O) Check whether the correct procedure was used and whether the correct device file was specified, and then retry.

Message ID	Message	Description and Action
KAQM04083-E	The file system cannot be expanded because it is being accessed too much.	<p>There might be an internal conflict as a result of the files in the file system being accessed too many times (i.e. write operations) by the clients.</p> <p>(O)</p> <p>Wait a while, and then view [List of File Systems] to confirm that the file system has expanded. If the file system has not expanded, acquire all the log data, and then contact maintenance personnel. See the Help for a list of the log files.</p> <p>Supplementary note:</p> <p>This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.</p>
KAQM04084-E	The capacity of the differential-data storage device is insufficient.	<p>This operation cannot be performed because the capacity of the differential-data storage device is insufficient.</p> <p>(O)</p> <p>Expand the differential-data storage device, or delete any unnecessary the differential-data snapshot.</p>
KAQM04085-E	The specified file system is expanding.	<p>The operation cannot be performed because the specified file system is expanding.</p> <p>(O)</p> <p>Wait a while, and then view [List of File Systems] to confirm that the file system has expanded. If the file system has expanded, and then retry the operation. If the file system has not expanded, acquire all the log data, and then contact maintenance personnel. See the Help for a list of the log files.</p>
KAQM04087-E	The specified device file number (<i>device-file-name</i>) is invalid.	<p>There is a mistake in the specified device file number.</p> <p>(O)</p> <p>Specify the correct device file number, and then retry.</p>
KAQM04090-E	The limit on the number of differential-data storage devices that can be created in	<p>The limit on the number of differential-data storage devices that can be created in the node or virtual server has been reached.</p>

Message ID	Message	Description and Action
	the node or virtual server has been reached.	(O) Release unnecessary differential-data storage devices, and then retry.
KAQM04094-E	The specified resource group is not operating in the node for which the command was executed.	The specified resource group is not operating in the node for which the command was executed. (O) Make sure that the operation status of the resource group is appropriate, and then try again.
KAQM04097-E	An attempt to mount a file system failed.	An attempt to mount a file system failed because an error occurred in the file system. (O) After rebooting the OS, in [List of File Systems], check the status indicated for the file system, and then take action appropriate for the status.
KAQM04098-E	An attempt to mount a file system failed.	The file system is in a state that prevents it from being mounted or there might be a problem in internal processing. (O) In [List of File Systems], check the status indicated for the file system, and then take action appropriate for the status. If no status indicates a problem, and you cannot identify the cause of the problem, acquire all the Management log files, and then contact maintenance personnel. For a list of the Management log files, see Help.
KAQM04099-E	An error was detected while accessing a device file that makes up the specified file system.	An error was detected while accessing a device file that makes up the specified file system. (O) Make sure an error is not occurring in the device files that make up the specified file system, and then try again. If this error reoccurs, acquire all the log data, and then contact maintenance personnel.
KAQM04100-E	An error occurred in file snapshot functionality processing for the specified file system.	An error occurred in file snapshot functionality processing for the specified file system. (O) Use the file snapshot functionality to remove the error, and then retry the operation.

Message ID	Message	Description and Action
KAQM04102-E	The specified file system is mounted.	Processing cannot be executed because the specified file system is mounted. (O) Unmount the file system, and then retry the operation.
KAQM04103-E	The differential-data snapshots, created for the specified file system, are mounted.	Processing cannot be executed, because the differential-data snapshots, created for the specified file system, are mounted. (O) Unmount all the differential-data snapshots, created for the specified file system, and then retry the operation.
KAQM04104-E	The operation cannot be performed because the file snapshot functionality or HFRR processing is currently executing.	The operation cannot be performed because the file snapshot functionality or HFRR processing is currently executing. (O) Wait until the file snapshot functionality or HFRR processing has finished, and then retry the operation.
KAQM04105-Q	Are you sure you want to separate the specified file system? (y/n)	This confirmation message is output before the file system is separated. (O) Enter y or n.
KAQM04106-E	An error occurred in the system.	A problem might exist in the processing of the system file. (O) Acquire all the log data, and then contact maintenance personnel.
KAQM04108-E	An operation for the specified file system has been suppressed.	Processing cannot continue because the <code>horcfreeze</code> command has suppressed operations on the specified file system. (O) Use the <code>horcunfreeze</code> command to release the suppressed operations, and then try again.
KAQM04109-E	An error occurred in the system.	An error occurred while attempting to import the file system. An error might have occurred with one or more specified device files, or the file system might not have been exported yet. (O) Acquire all the Management log files, and then inform maintenance

Message ID	Message	Description and Action
		personnel. See the help for a list of the Management log files.
KAQM04110-E	The specified file system was not mounted with read and write permissions.	Processing cannot be performed for the specified file system because it was not mounted with read and write permissions. (O) Mount the specified file system with read and write permissions, and then retry the operation.
KAQM04111-E	The specified file system is not a WORM file system.	The WORM function settings cannot be changed because the specified file system is not a WORM file system. (O) Check the file system settings from the file systems list.
KAQM04112-E	The ACL type of the specified file system cannot be converted because it is a WORM file system.	After a WORM file system is created, its ACL type cannot be converted. (O) Check the file system settings from the file systems list.
KAQM04113-E	The file system contains at least one file with a retention period.	The file system cannot be deleted because it contains at least one file with a retention period. (O) Make sure there are no files with a retention period, and then retry the operation.
KAQM04114-E	The specified file system cannot be separated because it is a WORM file system.	The specified file system cannot be separated because it is a WORM file system. (O) Check the file system settings from the file systems list.
KAQM04115-E	An attempt to change file system settings failed because of an internal processing error.	There might be a problem in the processing to change file system settings. (O) Acquire all the Management log files, and then inform maintenance personnel. For a list of the Management log files, see online Help. Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any

Message ID	Message	Description and Action
		SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.
KAQM04120-E	No license is set to allow creation of a WORM file system.	A license required for processing is not available. (O) Please set a license.
KAQM04122-E	An error was found in the correlation among the minimum, default, and maximum retention periods on the WORM file system.	The minimum retention period is more than the maximum retention period, or the default retention period is less than the minimum retention period, or the default retention period is more than the maximum retention period. (O) Specify a correct retention period, and then try again.
KAQM04123-E	The autocommit period could not be changed for the specified file system, because the autocommit function is already enabled.	The autocommit period cannot be changed for a file system for which the autocommit function is already enabled. (O) Specify a valid option, and then retry the operation.
KAQM04126-E	An internal error occurred.	A problem may exist in the internal processing. (O) Acquire all the log files, and then inform maintenance personnel. For a list of the log files, see online Help.
KAQM04134-E	The specified capacity exceeds the volume group's unused capacity.	The value specified for the file system capacity exceeds the volume group's unused capacity. (O) Check the volume group's unused capacity, and then specify a file system capacity that is less than or equal to that unused capacity.
KAQM04135-I	Settings for share quota will now be configured. (file system name = <i>file-system-name</i> , directory = <i>directory</i>)	Settings for share quota will now be configured. (O) No action is required.
KAQM04136-I	Settings for share quota will now be removed. (file system name = <i>file-system-name</i> , directory = <i>directory</i>)	Settings for share quota will now be removed. (O) No action is required.

Message ID	Message	Description and Action
KAQM04137-I	Execution of the share quota function ended successfully. (file system name = <i>file-system-name</i> , directory = <i>directory</i>)	Execution of the share quota function ended successfully. (O) No action is required.
KAQM04138-E	Execution of the share quota function ended abnormally. (file system name = <i>file-system-name</i> , directory = <i>directory</i>)	Execution of the share quota function ended abnormally. (O) Follow the instructions in the KAQM04139-I message in the Management log file (<i>management.log</i>) to resolve the problem.
KAQM04139-I	The detailed message of the KAQM04138-E message (file system name = <i>file-system-name</i> , directory = <i>directory</i>) is as follows: <i>detailed-message</i>	(O) Follow the instructions in the detailed message to resolve the problem.
KAQM04140-E	Execution of the share quota function failed. (file system name = <i>file-system-name</i> , directory = <i>directory</i>)	Another operation might have been executed while the share quota function was executing. (O) If this error occurs during the configuration of share quota settings, use the <code>stquotaset</code> command to remove the subtree quota settings and recover the status. If this error occurs during the removal of share quota settings, use the <code>stquotaset</code> command to configure the subtree quota settings and recover the status. After recovering the status, retry the operation, if necessary.
KAQM04146-W	One or more file system settings have been reset to their default values. (file system name = <i>file-system-name</i>)	One or more file system settings could not be restored because the file system was not mounted when the system settings information was saved. The settings that could not be restored have been reset to their default values. (O) Check the file system settings, and re-specify any settings that you want.
KAQM04150-E	An attempt to restore a file system failed. (file system name = <i>file-system-name</i>)	An attempt to restore a file system failed. (O) Delete the file system. Eliminate the cause of the error output to the Management log file

Message ID	Message	Description and Action
		(<code>management.log</code>), and then re-create the file system.
KAQM04151-I	The detailed message of the KAQM04150-E message (file system name = <i>file-system-name</i>) is as follows: <i>detailed-message</i>	(O) Follow the instructions in the detailed message to resolve the problem.
KAQM04152-E	A value that is less than or equal to the current capacity was specified for the capacity of the expanded file system.	A value that is less than or equal to the current capacity was specified. (O) Check the file system capacity. For the capacity of the expanded file system, specify a value that is greater than the current capacity, and then retry the operation.
KAQM04153-E	The operation cannot be performed because the specified file system is used by the system.	The operation cannot be performed because the specified file system is used by the system. (O) Check the file system, and then retry the operation.
KAQM04154-E	The operation cannot be performed because the specified file system is used by a user.	The operation cannot be performed because the specified file system is used by a user. (O) Check the file system, and then retry the operation.
KAQM04156-E	The operation cannot be performed because the virtual LU is not used by the specified file system.	The operation cannot be performed because the virtual LU is not used by the specified file system. (O) Make sure that the virtual LU is used by the file system, and then retry. If this error occurs repeatedly, acquire all log files and contact maintenance personnel. See the help file for a list of all log files.
KAQM04157-E	Unused space on the virtual LU failed to be freed up. The resource group status might have changed.	A problem might exist with the processing that frees up unused space on virtual LUs, or the resource group status might have changed during processing. (O) Check the resource group status. If no problems exist with the status, acquire all the log files, and then contact maintenance personnel. See online Help for a list of all the log files. Supplementary note:

Message ID	Message	Description and Action
		This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.
KAQM04158-I	Processing to release the unused area of a virtual LU for the differential-data storage device has started.	Processing to release the unused area of a virtual LU for the differential-data storage device has started. (O) No action is required.
KAQM04159-I	Processing to release the unused area of a virtual LU for the differential-data storage device has finished.	Processing to release the unused area of a virtual LU for the differential-data storage device has finished. (O) No action is required.
KAQM04160-I	Processing to release the unused area of a virtual LU for the file system has started.	Processing to release the unused area of a virtual LU for the file system has started. (O) No action is required.
KAQM04161-I	Processing to release the unused area of a virtual LU for the file system has finished.	Processing to release the unused area of a virtual LU for the file system has finished. (O) No action is required.
KAQM04162-E	The operation cannot be performed because processing is in progress to release the unused area of a virtual LU for the specified file system.	The operation cannot be performed because processing is in progress to release the unused area of a virtual LU for the specified file system. (O) Make sure that processing to release the unused area of a virtual LU has finished, and then retry. If this error occurs repeatedly, acquire all log files and contact maintenance personnel. See the help file for a list of the Management log files.
KAQM04163-E	An error occurred in processing to release the unused area of a virtual area for the differential-data storage device. There might be contention with an operation of the file snapshot functionality, or an internal error might have occurred.	There might be contention with an operation of the file snapshot functionality for the specified file system, or an internal error might have occurred. (O) Check the status of the differential-data storage device, and then take appropriate action depending on the

Message ID	Message	Description and Action
		<p>status. If no problems exist with the status, make sure that processing to set up or release the differential-data storage device has finished, and then retry. If this error occurs repeatedly, acquire all the log data and contact maintenance personnel. See the help file for a list of all the log data.</p> <p>Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.</p>
KAQM04164-E	The specified file system has been mounted as read-only.	<p>The specified file system has been mounted as read-only.</p> <p>(O)</p> <p>Mount the file system as read-write, or specify a valid file system name, and then retry the operation.</p>
KAQM04165-E	"Period to hold" cannot be set because the specified file system does not use file version restore.	<p>"Period to hold" cannot be set because the specified file system does not use file version restore.</p> <p>(O)</p> <p>Specify "--versioning use" or specify a file system that uses file version restore, and then retry the operation.</p>
KAQM04166-E	File version restore cannot be used if content sharing is set to On (the namespace access type is set to read-only).	<p>File version restore cannot be used if content sharing is set to On.</p> <p>(O)</p> <p>Specify a file system for which content sharing is not set to On, and then retry the operation.</p>
KAQM04167-Q	All of the past version directories and "Period to hold" settings will be deleted if "Versioning" is set to "do_not_use". Are you sure you want to change the settings? (y/n)	<p>This confirmation message is output before the setting for file version restore is changed to "Do not use."</p> <p>(O)</p> <p>Enter y or n.</p>
KAQM04169-E	The setting cannot be changed because content sharing is not set to On (the namespace access type is not set to read-only).	<p>Content sharing of the specified file system is not set to On.</p> <p>(O)</p> <p>Specify a valid file system, and then retry the operation.</p>

Message ID	Message	Description and Action
KAQM04170-E	The differential-data storage device of a tiered file system cannot be expanded by this command.	The differential-data storage device of a tiered file system cannot be expanded by this command. (O) Use the <code>syncexpand</code> command to expand the differential-data storage device.
KAQM04171-E	No license is set to allow linkage with an HCP system.	No license is set to allow linkage with an HCP system. (O) Please set a license.
KAQM04172-E	The file version restore could not be disabled because the deletion of the past version directory failed. (reason = {no such directory insufficient memory an I/O error no disk space currently being accessed some other error})	An attempt to delete the past version directory failed due to the cause shown in the reason. (O) See the KAQM37225-E message related to the failed directory in the Management log file (<code>management.log</code>). If there is insufficient memory, wait a while, and then retry the operation. If there is insufficient disk space, expand the file system, and then retry the operation. If the directory is currently being accessed, ask the client to stop accessing the failed directory. In all other cases, acquire all the log data, and then contact maintenance personnel.
KAQM04173-E	A tiered file system cannot be created because an existing file system has the same first 14 characters of the specified file system name.	The first 14 characters of a file system name for a tiered file system must be unique. (O) Specify a file system name whose first 14 characters are unique, and then retry the operation.
KAQM04174-E	An operation for tier <i>Tier-level</i> on the specified file system has failed. (detailed message = <i>detailed-message</i>)	An operation on the tiered file system failed because the error described in "detailed message" occurred. (O) Follow the instructions in "detailed message" to resolve the problem.
KAQM04175-E	A tier cannot be added to the specified file system because it has a setting that prevents tiering.	For the specified file system, one of the following is true: (1) Striping is enabled. (2) The function for linking with the HCP system is set up. (3) HFRR is set up.

Message ID	Message	Description and Action
		<p>(4) The file system is set as the import destination of another file server.</p> <p>(5) 64-bit inodes are supported.</p> <p>(6) On-demand mounting of differential-data snapshots is enabled.</p> <p>(O)</p> <p>For the specified file system, if one of the following is true, revise the file system settings, and then try the operation again:</p> <p>(1) The function for linking with the HCP system is set up, but the setting to synchronize the data with another site is not set up.</p> <p>(2) HFRR is set up.</p> <p>(3) The file system is set as the import destination of another file server.</p> <p>If one of the following is true, a layer cannot be added:</p> <p>(1) Striping is enabled.</p> <p>(2) The file system is configured to share data with another site via the linked HCP system.</p> <p>(3) 64-bit inodes are supported.</p> <p>(4) On-demand mounting of differential-data snapshots is enabled.</p>

If this error occurs repeatedly, acquire all the log data and contact maintenance personnel. For details on how to acquire all the log data, see the online Help.</p>
KAQM04177-I	Processing to release the unused area of a virtual LU for a differential-data storage device of the tier <i>Tier-level</i> has started.	<p>Processing to release the unused area of a virtual LU for a differential-data storage device of the tier has started.</p> <p>(O)</p> <p>No action is required.</p>
KAQM04178-I	Processing to release the unused area of a virtual LU for a differential-data storage	Processing to release the unused area of a virtual LU for a differential-data storage device of the tier has finished.

Message ID	Message	Description and Action
	device of the tier <i>Tier-level</i> has finished.	(O) No action is required.
KAQM04179-I	Processing to release the unused area of a virtual LU for the tier <i>Tier-level</i> has started.	Processing to release the unused area of a virtual LU for a tier on a tiered file system has started. (O) No action is required.
KAQM04180-I	Processing to release the unused area of a virtual LU for the tier <i>Tier-level</i> has finished.	Processing to release the unused area of a virtual LU for a tier on a tiered file system has finished. (O) No action is required.
KAQM04181-E	Acquisition of volume group information failed.	An error was detected during access to an LU in the volume group. There might be a problem in the LU or in the connection to the storage system. (O) Recover from the error in the volume group, and then retry the operation. If this error recurs, acquire all the Management log files, and then contact maintenance personnel. For a list of the Management log files, see the online Help file.
KAQM04182-E	A differential-data storage device for tier <i>Tier-level</i> is not specified.	To add a tier to a file system for which the file snapshot functionality is set, a differential-data storage device must be specified for the tier to be added. (O) Specify a differential-data storage device, and then retry the operation.
KAQM04183-E	A differential-data storage device for tier <i>Tier-level</i> cannot be added to the specified file system because the file snapshot functionality is not set for that file system.	The file snapshot functionality is not set for the specified file system. (O) Retry the operation without specifying a differential-data storage device.
KAQM04184-E	The specified file system cannot be separated because it is a tiered file system.	The specified file system cannot be separated because it is a tiered file system. (O) Specify a file system with no tier, and then retry the operation.
KAQM04185-E	File version restoration cannot be enabled because the specified file system is a tiered file system.	File version restoration cannot be enabled because the specified file system is a tiered file system. (O)

Message ID	Message	Description and Action
		Specify a file system with no tier, and then retry the operation.
KAQM04186-E	Setup of a file system tier has failed. (file system name = <i>file-system-name</i>)	An error might have occurred on the file system, or there might be a problem in internal processing. (O) In [List of File Systems], check the statuses of the file systems. If an error occurred, resolve the problem according to the status, and then try again. If none of the statuses indicate a problem, and you cannot identify the cause of the problem, acquire all the log data, and then contact maintenance personnel. For details on how to acquire all the log data, see the online Help.
KAQM04187-E	No license is set to allow creation of a tiered file system.	A license required for processing is invalid. (O) Please set a license.
KAQM04188-E	The file system could not be created or expanded because creation of the tier policy failed. (detailed message = <i>detailed-message</i>)	Creation of the tier policy failed due to the error shown in the detailed message. (O) Take action according to the instructions in the detailed message.
KAQM04189-E	The file system could not be deleted or separated from the node because a policy failed to be deleted. (detailed message = <i>detailed-message</i>)	The deletion of a policy failed due to the error shown in the detailed message. (O) Take action according to the instructions in the detailed message.
KAQM04190-E	A tier cannot be added to the specified file system because a past version directory exists.	A tier cannot be added to the specified file system because a past version directory exists. (O) Change the "Versioning" settings to "do_not_use", and then retry the operation.
KAQM04191-E	The file version restore could not be disabled because the deletion of the past version directory failed. (reason = {no such directory insufficient memory an I/O error no disk space currently being accessed some other error})	An attempt to delete the past version directory failed due to the cause shown in the reason. (O) If there is insufficient memory, wait a while, and then retry the operation. If there is insufficient disk space, expand the file system, and then retry the operation. If the directory is currently

Message ID	Message	Description and Action
		being accessed, ask the client to stop accessing the failed directory. In all other cases, acquire all the log data, and then contact maintenance personnel.
KAQM04193-E	The specified expansion capacity exceeds the maximum expansion size of the file system.	The specified expansion capacity exceeds the maximum expansion size of the file system. (O) Specify an expansion capacity so that the capacity of the file system after expansion is less than or equal to the maximum expansion size. For details on file system capacity, see online Help.
KAQM04194-E	Both the "--versioning do_not_use" option and the "--period-to-hold" option were specified.	The "--period-to-hold" option can only be used when the "--versioning" option is set to "use". (O) Set the "--versioning" option to "use" in order to use the "--period-to-hold" option.
KAQM04195-E	"Period to hold" could not be changed because an attempt to delete a past version directory that exceeded its "Period to hold" failed. (reason = {no such directory insufficient memory an I/O error no disk space currently being accessed some other error})	An attempt to delete the past version directory failed due to the cause shown in the reason. (O) See the KAQM37225-E message related to the failed directory in the Management log file (management.log). If there is insufficient memory, wait a while, and then retry the operation. If there is insufficient disk space, expand the file system, and then retry the operation. If the directory is currently being accessed, ask the client to stop accessing the failed directory. In all other cases, acquire all the log data, and then contact maintenance personnel.
KAQM04196-E	"Period to hold" could not be changed because an attempt to delete a past version directory that exceeded its "Period to hold" failed. (reason = {no such directory insufficient memory an I/O error no disk space currently being accessed some other error})	An attempt to delete the past version directory failed due to the cause shown in the reason. (O) If there is insufficient memory, wait a while, and then retry the operation. If there is insufficient disk space, expand the file system, and then retry the operation. If the directory is currently being accessed, ask the client to stop accessing the failed directory. In all other cases, acquire all the log data,

Message ID	Message	Description and Action
		and then contact maintenance personnel.
KAQM04197-E	The specified option can be specified for only tiered file systems. (option = <i>Option-name</i>)	The specified option can be specified for tiered file systems only. (O) Check the settings for the file system, and then re-execute the command.
KAQM04198-Q	Split files are not subject to single instancing. Are you sure you want to split the file? (y/n)	This confirmation message is output before a file is split. (O) Enter y or n.
KAQM04199-E	The specified file does not exist, or a directory was specified. (path = <i>path</i>)	The specified file does not exist, or a directory was specified. (O) Check the specified path, and then retry the operation.
KAQM04200-E	The file system capacity is insufficient.	This operation cannot be performed because the file system capacity is insufficient. (O) Delete unnecessary data on the file system or increase the file system capacity, and then retry the operation.
KAQM04201-E	An I/O error occurred.	An error might have occurred on the file system, or there might be a problem in internal processing. (O) In [List of File Systems], check the statuses of the file systems. If an error occurred, take action appropriate to the status, and then try again. If none of the statuses indicate a problem, and you cannot identify the cause of the problem, acquire all the log data, and then contact maintenance personnel. For details on how to acquire all the log data, see the online Help.
KAQM04202-E	Single instancing cannot be enabled for the specified file system.	One of the following is true: (1) The file system is set as the import destination of another file server. (2) The file system is configured to view the data of another site as read-only data via the HCP system. (3) The file system is configured to share data with other sites by using the read-write-content-sharing functionality. (O)

Message ID	Message	Description and Action
		Check the file system settings, and then retry the operation.
KAQM04203-E	The specified file is now being accessed. (file path = <i>file-path</i>)	This operation cannot be performed because the specified file is now being accessed. (O) Wait a while, and then retry the operation.
KAQM04204-E	Memory is insufficient.	Memory allocation failed. (O) Wait a while, and then retry the operation. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM04205-I	Processing to reorganize the inode area will now start. (file system name = <i>file-system-name</i>)	Processing to reorganize the inode area will now start. (O) No action is required.
KAQM04206-E	The file system was not mounted with read and write permissions enabled. (file system name = <i>file-system-name</i>)	Processing cannot be performed because the file system was not mounted with read and write permissions enabled. (O) Mount the file system with read and write permissions enabled, and then retry the operation.
KAQM04208-E	The operation cannot be performed because the file snapshot functionality is being used. (file system name = <i>file-system-name</i>)	This operation cannot be performed on file snapshot functionality differential-data snapshots. (O) From the list of file systems, check the file system name, and then retry the operation.
KAQM04209-E	The operation cannot be performed because the HFRR functionality is being used. (file system name = <i>file-system-name</i>)	This operation cannot be performed on an HFRR differential-data snapshot. (O) From the list of file systems, check the file system name, and then retry the operation.
KAQM04210-E	The file system is blocked. (file system name = <i>file-system-name</i>)	The file system or a device file used by the file system is blocked. (O) Follow the troubleshooting instructions in online Help to check the file system and device file errors from the list of file systems, and then contact

Message ID	Message	Description and Action
		maintenance personnel to resolve the problem.
KAQM04211-E	The file system is being blocked because there is not enough space on the differential-data storage device, or there might be a problem with the differential-data storage device. (file system name = <i>file-system-name</i>)	The operation cannot be performed because either the file system is being blocked because there is not enough space on the differential-data storage device, or there might be a problem with the differential-data storage device. (O) Check the status of the file system and differential-data storage device, and then take appropriate action depending on the status.
KAQM04213-E	Reorganization of the inode area failed. (file system name = <i>file-system-name</i>)	The file system was unmounted while the inode area was being reorganized, or a failure might have occurred. (O) Check the status of the file system from the list of file systems. If the file system is in the mount status, retry the operation. If a failure occurred, take action appropriate to the status, and then retry the operation. If there is no problem with the status, acquire all the log data, and then contact maintenance personnel. For details on how to acquire all the log data, see online Help.
KAQM04214-E	The inode area cannot be reorganized because the total capacity of the file system is less than 1 TB. (file system name = <i>file-system-name</i>)	The inode area cannot be reorganized for file systems whose total capacity is less than 1 TB. (O) Check the total capacity of the file system, and then retry the operation.
KAQM04215-E	The inode area is already being reorganized.	The inode area is already being reorganized for the specified file system. (O) Specify a valid file system, and then retry the operation.
KAQM04216-I	Reorganization of the inode area finished. (file system name = <i>file-system-name</i>)	Reorganization of the inode area finished. (O) No action is required.
KAQM04217-E	A tier could not be added to the specified file system because the cancellation of a file analysis policy failed.	The cancellation of a file analysis policy failed due to the error shown in the detailed message. (O)

Message ID	Message	Description and Action
	(detailed message = <i>detailed-message</i>)	Take action according to the instructions in the detailed message.
KAQM04218-E	Acquisition of the file status failed.	A failover occurred or the resource group stopped. (O) Check the status of the resource group, and then retry the operation.
KAQM04219-E	This operation cannot be performed because the file system was created on a system that was earlier than version 3.2.0-00.	This operation cannot be performed because the file system was created on a system that was earlier than version 3.2.0-00. (O) Specify a file system that was created on a system that was version 3.2.0-00 or later, and then retry the operation.
KAQM04220-E	The file system could not be created because creation of the single instancing policy failed. (detailed message = <i>detailed-message</i>)	Creation of the single instancing policy failed because of the error shown in the detailed message. (O) Read the detailed message, and take appropriate action.
KAQM04221-E	Creation of the single instancing policy failed. (detailed message = <i>detailed-message</i>)	Creation of the single instancing policy failed because of the error shown in the detailed message. (O) Read the detailed message, take appropriate action, and create a single instancing policy from the GUI.
KAQM04224-E	Restoration of the file systems failed because the volume group does not have enough unused capacity to create them. When the settings were saved, the number of file systems was <i>number-of-file-systems-when-the-settings-were-saved</i> and the total capacity of the file systems was <i>total-capacity-of-the-file-systems-when-the-settings-were-saved</i> GB.	Restoration of the file systems failed because the volume group does not have enough unused capacity to create them. (O) Increase the capacity of the LU, perform a new installation of OS, and then retry the operation.
KAQM04225-I	The file systems were created with a smaller capacity because the unused capacity on the volume group was less than the total capacity of the file systems when the settings were saved. When the settings were saved, the total capacity of the file systems was <i>total-capacity-of-the-file-</i>	The file systems were created with a smaller capacity because the unused capacity on the volume group was less than the total capacity of the file systems when the settings were saved. (O) Check the reserved space, warning threshold, and stub threshold values specified in each file system.

Message ID	Message	Description and Action
	<i>systems-when-the-settings-were-saved</i> GB. The total capacity of the created file systems is <i>total-capacity-of-the-created-file-systems</i> GB. Check the reserved space, warning threshold, and stub threshold values specified in each file system.	
KAQM04226-Q	Newly added LUs were detected. When automatic assignment processing is performed, volume groups are automatically created and expanded according to the storage systems the LUs are in, the drive types, and the pools. When automatic assignment processing is not performed, you must manually create and expand the volume groups. Are you sure you want to perform automatic assignment processing? (y/n)	This confirmation message is output when newly added LUs are detected. (O) Enter y or n.
KAQM04227-Q	LUs with different drive types or pools are mixed together. If you perform this operation, automatic assignment processing will not be performed on the specified volume group. Are you sure you want to perform this operation? (y/n)	This confirmation message is output when LUs with different drive types or pools are mixed together as a result of a volume group being created or expanded. (O) Enter y or n.
KAQM04228-Q	A volume group already exists that contains an LU in the same storage system and with the same drive type and pool as the specified LU. If you perform this operation, automatic assignment processing will not be performed for the specified volume group or any other volume groups with the same storage system, drive type, and pool. Are you sure you want to perform this operation? (y/n)	This confirmation message is output when a volume group already exists that contains an LU in the same storage system and with the same drive type and pool as the specified LU. (O) Enter y or n.
KAQM04229-W	The LU (<i>LU-name</i>) is being used by another volume group.	The LU is being used by another volume group. (O) Specify a LU that is not already allocated to a volume group.

Message ID	Message	Description and Action
KAQM04230-W	The LU (<i>LU-name</i>) was not assigned to the volume group because a volume group already exists that contains an LU in the same storage system and with the same drive type and pool as the specified LU.	A volume group already exists that contains an LU in the same storage system and with the same drive type and pool as the specified LU. (O) Specify a volume group name, and then create a volume group.
KAQM04231-W	The LU (<i>LU-name</i>) was not assigned to the volume group because no volume groups exist that contain an LU in the same storage system and with the same drive type and pool as the specified LU.	No volume groups exist that contain an LU in the same storage system and with the same drive type and pool as the specified LU. (O) Specify a volume group name, and then expand a volume group.
KAQM04232-W	The LU (<i>LU-name</i>) was not assigned to the volume group because multiple volume groups exist that contain an LU in the same storage system and with the same drive type and pool as the specified LU.	Multiple volume groups exist that contain an LU in the same storage system and with the same drive type and pool as the specified LU. (O) Specify a volume group name, and then expand a volume group.
KAQM04233-E	The volume group cannot be created or expanded because the resource group or virtual server is not running properly.	The resource group or virtual server is not running properly. (O) Check the cluster, node, and resource group or virtual server status, and then retry the operation.
KAQM04234-E	The volume group cannot be deleted because a file system exists.	The volume group cannot be deleted because a file system exists. (O) Delete the file system, and then retry the operation.
KAQM04235-E	The specified volume group name (<i>volume-group-name</i>) already exists.	The same volume group name already exists. (O) Enter a different volume group name.
KAQM04236-E	The volume group contains one or more invalid file systems or differential-data storage devices.	The volume group contains one or more invalid file systems or differential-data storage devices. (O) Delete any invalid file systems and differential-data storage devices, and then retry the operation.
KAQM04237-E	The specified volume group does not exist on an active node or virtual server.	The specified volume group does not exist on an active node or virtual server.

Message ID	Message	Description and Action
		(O) From the list of volume groups, check the volume group name, and then retry the operation.
KAQM04238-E	Recovery of the volume group failed.	Recovery of the volume group failed. (O) Confirm the status of the FC paths, and then confirm that there are no problems with the connection to the storage system. If there are no such problems, retry the operation. If this error occurs repeatedly, acquire all the Management log files and then contact maintenance personnel.
KAQM04239-E	The specified LU is already assigned to a volume group.	The specified LU cannot be used because it is already assigned to a volume group. (O) Specify a different LU, and then retry the operation.
KAQM04240-E	Creation of a volume group to assign the LU (<i>LU-name</i>) to failed.	Creation of a volume group failed. (O) Read the subsequent messages and take appropriate action.
KAQM04241-E	Assignment to the volume group (<i>volume-group-name</i>) that already contains the LU (<i>LU-name</i>) failed.	Expansion of the volume group failed. (O) Read the subsequent messages and take appropriate action.
KAQM04242-E	This operation cannot be performed because a volume group has not been created.	A volume group has not been created. (O) Create a volume group, and then retry the operation.
KAQM04243-E	This operation cannot be performed because multiple volume groups exist.	This operation cannot be performed because multiple volume groups exist. (O) Execute the <code>vgrlist</code> command to check the capacity of the volume groups. Specify a volume group name to create a file system.
KAQM04244-Q	Are you sure you want to delete the specified volume group? (y/n)	This confirmation message is output before a volume group is deleted. (O) Enter y or n.
KAQM04245-Q	Are you sure you want to recover the specified volume group? (y/n)	This confirmation message is output before a volume group is recovered. (O)

Message ID	Message	Description and Action
		Enter y or n.
KAQM04246-E	An error occurred with all the LUs in the volume group.	An error occurred with the LUs in the volume group. (O) Follow the troubleshooting section in Help to check the LU error information, and then contact maintenance personnel to recover from the error.
KAQM04247-E	Restoration of a volume group (<i>volume-group-name</i>) failed.	Restoration of a volume group failed. (O) Remove the cause of the error message output to the Management log file (<i>management.log</i>), perform a new installation of the OS, and then retry the operation.
KAQM04248-I	KAQM04247-E message (volume group name = <i>volume-group-name</i>) detailed message: <i>detailed-message</i>	(O) Follow the instructions in the detailed message to resolve the problem.
KAQM04249-W	An error occurred in the LU (<i>LU-name</i>).	An error occurred in the LU. (O) Recover the LU from the problem, and then retry the operation. If the problem persists, acquire all the Management log files and then contact maintenance personnel.
KAQM04250-W	The LU (<i>LU-name</i>) cannot be assigned to the volume group (<i>volume-group-name</i>) because an error occurred with an LU in the volume group.	An error occurred with an LU in the volume group. (O) Recover the LU from the problem, and then retry the operation. If the problem persists, acquire all the Management log files and then contact maintenance personnel.
KAQM04251-E	The volume group was neither created nor expanded.	The volume group was neither created nor expanded. (O) Follow the instructions in the warning message output to the Management log file (<i>management.log</i>) to resolve the problem.
KAQM04252-E	The <code>--ddev</code> option cannot be specified because the file snapshot functionality is not enabled for the specified file system.	The file snapshot functionality is not enabled for the specified file system. (O) Retry the operation without the <code>--ddev</code> option, or specify a file system for which the file snapshot functionality is enabled, and then retry the operation.

Message ID	Message	Description and Action
KAQM04253-E	An error occurred with one or more LUs in the specified volume group.	An error occurred with one or more LUs in the specified volume group. (O) Recover the LU from the problem, and then retry the operation. If the problem persists, acquire all the Management log files and then contact maintenance personnel.
KAQM04254-E	A volume group operation failed.	An error might have occurred in an LU in the volume group, or the information of the volume group in which the error occurred might still be on the LU. (O) Check the LU status, and then after rebooting OS, try again. If this error recurs, acquire all the Management log files, and then contact maintenance personnel.
KAQM04255-E	The specified LU is not assigned to the specified volume group.	The specified LU is not assigned to the specified volume group. (O) Specify an LU that is assigned to the specified volume group.
KAQM04256-W	The LU (<i>LU-name</i>) is being used by another volume group.	The LU is being used by another volume group. (O) Check the volume group status.
KAQM04257-E	The specified file system size exceeds the maximum capacity.	The specified file system size exceeds the maximum capacity. (O) Specify a size less than or equal to the maximum capacity. For details about file system capacity, see Help.
KAQM04258-E	File system creation failed. One or more LUs in the volume group might be blocked.	One or more LUs in the volume group might be blocked, or a problem might exist with internal processing. (O) Recover the LU from the problem, and then retry the operation. If the problem cannot be resolved, acquire all the log data, and then contact maintenance personnel.
KAQM04259-E	File system expansion failed. One or more LUs in the volume group might be blocked.	One or more LUs in the volume group might be blocked, or a problem might exist with internal processing. (O)

Message ID	Message	Description and Action
		Recover the LU from the problem, and then retry the operation. If the problem cannot be resolved, acquire all the log data, and then contact maintenance personnel.
KAQM04260-E	Mounting of a file system failed. One or more LUs in the volume group might be blocked.	One or more LUs in the volume group might be blocked, or a problem might exist with internal processing. (O) Recover the LU from the problem, and then retry the operation. If the problem cannot be resolved, acquire all the log data, and then contact maintenance personnel.
KAQM04261-E	Changing of the file system settings failed. One or more LUs in the volume group might be blocked.	One or more LUs in the volume group might be blocked, or a problem might exist with internal processing. (O) Recover the LU from the problem, and then retry the operation. If the problem cannot be resolved, acquire all the log data, and then contact maintenance personnel.
KAQM04262-E	The WORM functionality and the home-directory-roaming functionality cannot be used at the same time.	The WORM functionality and the home-directory-roaming functionality cannot be used at the same time. (O) Check the combination of options, and then retry the operation.
KAQM04263-E	The single-instancing functionality and the home-directory-roaming functionality cannot be used at the same time.	The single-instancing functionality and the home-directory-roaming functionality cannot be used at the same time. (O) Check the combination of options, and then retry the operation.
KAQM04264-E	The single-instancing functionality cannot be used for the specified file system because the home-directory-roaming functionality is already enabled for the file system.	The single-instancing functionality cannot be used for the specified file system because the home-directory-roaming functionality is already enabled for the file system. (O) Check the file system settings, and then retry the operation.
KAQM04265-E	The specified namespace cannot be set because another file system in the system is using it.	Another file system in the system is using the specified namespace. (O) Check the namespace to be used, and then retry the operation.

Message ID	Message	Description and Action
KAQM04266-E	The file system could not be created because creation of the migrate policy failed. (detailed message = <i>detailed-message</i>)	Creation of the migrate policy failed because of the error shown in the detailed message. (O) Read the detailed message, and take appropriate action.
KAQM04267-E	A file system could not be created, because information about the HCP system being connected to is not set.	Confirmation of the connection to the HCP namespace failed because information about the HCP system being connected to is not set. (O) Set the information about the HCP system being connected to, and then retry the operation.
KAQM04268-E	The CIFS bypass traverse checking functionality and the home directory roaming functionality cannot be used at the same time.	The CIFS bypass traverse checking functionality and the home directory roaming functionality cannot be used at the same time. (O) Check the combination of options, and then retry the operation.
KAQM04269-E	The specified file system cannot use the CIFS bypass traverse checking functionality because the file system uses home directory roaming.	The specified file system cannot use the CIFS bypass traverse checking functionality because the file system uses home directory roaming. (O) Check the file system settings, and then retry the operation.
KAQM04270-I	The CIFS bypass traverse checking functionality was set to not be used because the specified file system uses home directory roaming.	The CIFS bypass traverse checking functionality cannot be used in a file system that uses home directory roaming. (O) No action is required.
KAQM04273-E	The total of the following exceeds the maximum: the number of device files used in the file system, and the number of specified device files.	The total of the following exceeds the maximum: the number of device files used in the file system, and the number of specified device files. (O) Check the number of device files used in the file system and the number of specified device files. If the file system is used for the file snapshot functionality, also check the number of the device files that make up the differential-data storage device. For details on the maximum number of device files that make up the file system, see Help.

Message ID	Message	Description and Action
KAQM04274-E	The settings used for namespace access cannot be changed because the specified file system is connected to an HCP system on a per-share basis.	The settings used for namespace access cannot be changed because the specified file system is connected to an HCP system on a per-share basis. (O) Check the namespace type of the file system. If the file system is connected to the HCP system on a per-share basis, change the settings used for namespace access for each share.
KAQM04275-E	Failed to delete the file system linked to HCP on a per-share basis.	Failed to update the system file because a communication error might have occurred. (O) Make sure that the OS in the cluster has not stopped, and make sure that no network errors have occurred. If you cannot resolve the problem, acquire all the log data, and then contact maintenance personnel.
KAQM04276-E	A host name or IP address for connecting to a replica HCP that has been made external cannot be set, because no host name is set for the replica HCP.	A host name or IP address for connecting to a replica HCP that has been made external cannot be set, because no host name is set for the replica HCP. (O) To set a host name or IP address for connecting to a replica HCP that has been made external, set a host name for the replica HCP.
KAQM04277-E	The host name set for the replica HCP cannot be deleted, because a host name or IP address for connecting to a replica HCP that has been made external is set.	The host name set for the replica HCP cannot be deleted, because a host name or IP address for connecting to a replica HCP that has been made external is set. (O) To delete the host name set for a replica HCP, you must also delete the host name or IP address for connecting to the replica HCP that has been made external.
KAQM04278-E	The custom schedule of the file version restore function cannot be used because the specified file system has not made the past versions of the files migrated to the HCP system available to the clients.	The specified file system has not been made available to the clients of past versions of the files migrated to HCP. (O) To use the custom schedule of the file version restore function, configure the settings so that the past versions of the files migrated to the HCP system are made available to the clients.

Message ID	Message	Description and Action
KAQM04280-I	Past version directories might not be retained as per the custom schedule settings, because the retention period of past version directories is shorter than the value recommended for when custom scheduling is enabled.	The retention period of past version directories is shorter than the value recommended for when custom scheduling is enabled. (O) Review the retention period of past version directories and the custom scheduling of the file version restore function, and then make sure that the retention period of past versions is longer than the value recommended for when custom scheduling is enabled. For information on the recommended values for the retention period of past version directories, see Help.
KAQM04281-E	The custom schedule of the file version restore function cannot be set because there is no valid schedule.	The custom schedule of the file version restore function cannot be set because there is no valid schedule. (O) To set the custom schedule of the file version restore function, specify one or more valid schedules.
KAQM04282-E	A file system cannot be created, because functions that cannot be set at the same time are specified.	The WORM functionality and the read-write-content-sharing functionality cannot be used at the same time. (O) Check the file system settings, and then retry the operation.
KAQM04283-E	Failed to restore the specified reserved space in the file system. When the settings were saved, the file system name was <i>file-system-name-when-the-settings-were-saved</i> , and the reserved space was <i>reserved-space-when-the-settings-were-saved</i> .	An attempt to restore the specified reserved space in the file system failed. (O) Check the reserved space specified in the file system.
KAQM04284-E	Failed to unmount the differential-data snapshots to be mounted on demand.	An attempt to unmount the differential-data snapshots to be mounted on demand failed. (O) Wait a while, and then try again. If this message is output repeatedly, acquire all log files, and then contact maintenance personnel.
KAQM04285-E	The autocommit function is not enabled in the specified file system.	In file systems where the autocommit function is disabled, the default retention period cannot be changed. (O)

Message ID	Message	Description and Action
		Specify a valid option, and then retry the operation.
KAQM04286-Q	Once you set the autocommit period, you will no longer be able to change it. For linkage with HCP system, if the autocommit period is longer than the migration execution interval, migration might take a long time. Are you sure you want to execute the command? (y/n)	This confirmation message is output before the autocommit function is enabled. (O) Enter y or n.
KAQM04287-E	An error occurred in Active File Migration functionality processing for the specified file system.	An error occurred in Active File Migration functionality processing for the specified file system. (O) Acquire all log files, and then contact maintenance personnel.
KAQM04288-I	Reorganization of the inode area started. (file system name = <i>file-system-name</i> , PID = <i>PID</i>)	Reorganization of the inode area started. (O) No action is required.
KAQM04289-I	Reorganization of the inode area finished. (result = <i>result</i> , message ID = <i>message-ID</i> , file system name = <i>file-system-name</i> , PID = <i>PID</i>)	Reorganization of the inode area finished. (O) If the result is "Succeeded", no action is required. If the result is "Failed", perform the action described in the error message that corresponds to the displayed message ID and that was output before this message.
KAQM04290-W	A file system to be deleted (<i>file-system-name</i>) is set up as a file system used for making the latest differential-data snapshots visible. Ensure that the resource group or virtual server is operating correctly, and then remove the setting.	While a resource group or virtual server was not operating normally, a file system that was set up as a file system used for making the latest differential-data snapshots visible was deleted. (O) Ensure that the resource group or virtual server is operating correctly, and then remove the setting that specifies the file system as a file system used for making the latest differential-data snapshots visible.

KAQM05 messages

This section explains messages that have a message ID beginning with KAQM05, and the actions to be taken if such messages appear.

Table 5-3 KAQM05 messages

Message ID	Message	Description and Action
KAQM05001-E	A syntax error exists in the entered <i>item-name</i> .	The specified data syntax is incorrect. (O) Specify using alphanumeric characters, periods (.), hyphens (-), or underscores (_), or in IP address format.
KAQM05002-E	A syntax error exists in the entered <i>item-name</i> .	The specified data syntax is incorrect. (O) Specify this in IP address format.
KAQM05004-E	A syntax error exists in the entered NIS domain.	The specified data syntax is incorrect. (O) Specify with alphanumeric characters, periods (.), hyphens (-), underscores (_), plus signs (+), equal signs (=), left brackets ([), right brackets (]), left braces ({), right braces (}), percent signs (%), at marks (@), or colons (:).
KAQM05006-E	A syntax error exists in the entered MSS.	The specified data syntax is incorrect. (O) Specify within the numeric range of 64 to 65536.
KAQM05007-E	The specified time-zone information does not exist.	The specified time-zone is disabled. (O) Specify a time-zone in the list.
KAQM05009-E	Specify at least one <i>item-name</i> .	No value is specified for this item. (O) Specify a value for the item.
KAQM05010-E	An internal error occurred.	A problem may exist in the internal processing. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM05018-E	The specified host name (<i>host-name</i>) cannot be resolved.	A host name that cannot be resolved was specified. (O) Specify a host name that can be resolved or an IP address.
KAQM05019-E	The specified gateway is not in the network.	The specified gateway is outside this network. (O)

Message ID	Message	Description and Action
		Specify a gateway in this network.
KAQM05025-E	Processing cannot be performed because a cluster configuration is not defined.	A cluster configuration is not defined. (O) Define the cluster configuration.
KAQM05026-E	The cluster, resource group, or virtual server has not stopped.	The resource group or virtual server is not in the Offline state, or the cluster is not in the INACTIVE state. (O) Make sure that the resource group and virtual server are in the Offline state and that the cluster and node are in the INACTIVE state, and then retry the operation.
KAQM05027-E	The number of virtual IP addresses (service IP addresses) has reached the maximum.	The operation cannot be executed because the number of virtual IP addresses has reached the maximum. (O) Delete unnecessary virtual IP addresses, and then retry execution.
KAQM05028-E	The specified routing entry already exists.	The specified target is the same as that of an existing route or a route that is used by the system. Alternatively, an attempt was made to register more than one default route. (O) In the routing settings in the node, check whether a route with the specified target already exists and whether the routing settings in the cluster have been synchronized. Use the <code>routelist -l</code> command to check the routes that are used by the system. If the target you specified already exists in the routing settings, specify the target of a different route. If the routing settings in the cluster have not yet been synchronized, delete the routes, and then add routes again.
KAQM05029-E	An attempt to set routing information failed.	An error occurred during execution of the <code>route</code> command, or an unexpected error occurred while the routing information was being set. (O) Check the entered data, and re-enter valid data. Also make sure that the node in the cluster has not stopped, and check for network errors. Acquire all the Management log files if there is no problem, and inform maintenance

Message ID	Message	Description and Action
		personnel. See the help for a list of the Management log files.
KAQM05030-E	In the cluster, nodes that cannot synchronize exist.	A problem exists in the communication processing between nodes. (O) Check whether the interface settings or routing settings have affected the network settings of the management LAN, make sure that the node in the cluster has not stopped, and check for network errors. Also, the synchronization processing might not have completed because one of the nodes is heavily loaded. In this case, make sure that the state of the node changes to normal (that is, not heavily loaded), and then retry execution. If the error occurs again, a problem might exist in the connection with the NIS server, DNS server, or LDAP server. Release the settings of each server temporarily, and then retry execution. If the error still occurs, inform maintenance personnel.
KAQM05032-E	The entry for the VLAN ID is invalid.	The entered value is invalid. (O) Specify a number from 1 to 4094.
KAQM05033-E	The entry for the MTU is invalid.	The entered value is invalid. (O) Specify a valid MTU according to the help.
KAQM05034-E	The specified IP address cannot be used because it is already in use. (IP address = <i>duplicated-IP-address</i>)	The specified IP address is already in use. (O) Check the interface settings. If the specified IP address is already in use, specify a different IP address. In other cases, contact maintenance personnel.
KAQM05035-E	IP addresses of different networks were specified in the same interface.	In a cluster, fixed IP addresses or service IP addresses of different networks are specified. (O) Specify another IP address.
KAQM05036-E	The network identified by the specified IP address and netmask cannot be used because it is already in use. (network address= <i>duplicated-network-address</i>)	The network identified by the specified IP address and netmask is already in use. (O) Check the interface settings. If the network identified by the specified IP

Message ID	Message	Description and Action
		address and netmask is already in use, specify a different IP address or netmask. In other cases, contact maintenance personnel.
KAQM05037-E	The specified VLAN ID cannot be used. (VLAN ID= <i>duplicated-VLAN-ID</i>)	The specified VLAN ID is already being used. (O) Specify another VLAN ID.
KAQM05038-E	The specified interface does not exist. (interface= <i>interface-name</i>)	The specified interface has not been created. <i>interface-name</i> The name of the interface that was specified but does not exist (O) Specify a valid interface.
KAQM05039-E	Specify one or more virtual IP addresses (service IP addresses) for the interface.	No virtual IP address is specified. (O) Specify one or more virtual IP addresses for the relevant interface.
KAQM05040-E	The entry for the port is invalid.	The entry for the port is invalid. (O) Check the specified data, and then specify valid data.
KAQM05041-E	The specified port is already being used.	The specified port is already being used. (O) Specify another port.
KAQM05042-E	The interface specification is invalid.	The specified value is invalid. (O) Check the specified data, and then specify valid data.
KAQM05043-E	The entry for the gateway is invalid.	The entered value is invalid. (O) Specify a maximum of 255 characters.
KAQM05044-E	An attempt to recover the network settings has failed.	An attempt to roll back the network settings has failed. (O) Make sure that the node in the cluster has not stopped, and check for network errors. Acquire all the Management log files if there is no problem, and inform maintenance personnel. See the help for a list of the Management log files.

Message ID	Message	Description and Action
KAQM05045-E	The specified port cannot be used. (port= <i>port-name</i>)	The specified port is already being used, or does not exist. (O) Check the specified port.
KAQM05048-E	An attempt to access the cluster management LU has failed.	An attempt to update the IP address information of the cluster management LU has failed. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM05050-E	An attempt to acquire the status of the cluster or the resource group has failed.	An error in the failover function or a hardware error might have occurred. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM05051-E	An attempt to restart the network has failed.	A communication error or a hardware error might have occurred. (O) Make sure that the node in the cluster has not stopped, and check for network errors. Acquire all the Management log files if there is no problem, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM05053-E	An attempt to set network information has failed.	An unexpected error occurred while the network information was being set. (O) Check whether a network error has occurred. If you cannot identify the cause of the problem, collect all log data, and then contact maintenance personnel.
KAQM05055-E	An attempt to read the file to be used for the requested processing has failed.	An unexpected error occurred during the reading of a file. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM05056-E	An attempt to write to the file to be used for the requested processing has failed.	An unexpected error occurred during the writing of a file. (O)

Message ID	Message	Description and Action
		Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM05058-E	The MTU specification is invalid.	The specified value is invalid. (O) Specify the MTU so that the same values will be in the cluster.
KAQM05062-E	A usable port does not exist.	All ports are being used. (O) Delete a port that is not being used, and then retry execution.
KAQM05063-E	An attempt to acquire the port has failed.	A hardware error might have occurred. (O) Execute the same processing again after waiting. Acquire all the Management log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM05064-E	The number of routing information registrations has reached the maximum.	The operation cannot be executed because the number of routing information registrations has reached the maximum. (O) Delete unnecessary routing information, and then retry execution.
KAQM05065-E	The specified port that configures a trunking cannot be used. (port= <i>port-name</i>)	The specified port is already being used by another trunking configuration. <i>port-name</i> The name of the port already being used (O) Check the trunking configuration in the List of Trunking Configurations window, specify a valid port, and then retry execution.
KAQM05066-E	The specified trunking port does not exist. (port= <i>port-name</i>)	The specified port is already released, or not created. <i>port-name</i> The name of the port that was specified but does not exist (O) Check the trunking configuration in the List of Trunking Configurations

Message ID	Message	Description and Action
		window, specify a valid port, and then retry execution.
KAQM05067-E	An attempt to change an active link has failed.	An error might have occurred in the link that was going to be changed. (O) Check the status in the List of Trunking Configurations window, recover the error, and then retry the execution. If the error still occurs when you retry the execution, acquire all of the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM05068-E	The trunking that consists of the specified ports cannot be created. (port= <i>port-name</i>)	A combination of ports that cannot be used for creating trunking was specified. <i>port-name</i> The name of the port that cannot be used to create trunking (O) Check the trunking configurations that can be created, specify a valid trunking configuration, and then retry execution.
KAQM05069-E	An attempt to create trunking has failed.	An unexpected error occurred during creation of the trunking configuration. (O) Make sure that the node in the cluster has not stopped, and check for network errors. If there is no problem, check whether the settings are synchronized in the cluster, in the List of Trunking Configurations window. If there are settings that are not synchronized in the cluster, release the settings, and then retry the execution. If the error still occurs when you retry the execution, acquire all of the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM05070-E	An attempt to initialize a port has failed.	An attempt to initialize the interface set on the specified port failed. (O) Make sure that all the virtual servers are in the correct state, and then retry the operation. If the error occurs again, download all the management log files and contact Product Support. For a list of management log files, see Help.

Message ID	Message	Description and Action
KAQM05071-E	An attempt to create trunking has failed.	The trunking configuration you tried to create already exists. (O) Check the trunking configuration in the List of Trunking Configurations window.
KAQM05072-E	The specified trunking port cannot be released. (port= <i>port-name</i>)	The specified port is already being used by another trunking configuration. <i>port-name</i> The name of the port that cannot be used to set new trunking (O) Check the trunking configuration in the List of Trunking Configurations window.
KAQM05073-E	An attempt to release trunking has failed.	An unexpected error occurred while the trunking was being released. (O) Make sure that the node in the cluster has not stopped, and check for network errors. Acquire all the Management log files if there is no problem, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM05074-E	An attempt to edit trunking has failed.	An error occurred while the trunking was being edited. (O) Make sure that all the virtual servers are in the correct state, and then retry the operation. Make sure that node has not stopped in the cluster and that no network errors have occurred. If no problem exists, review the List of Trunking Configurations window and confirm that the settings within the cluster are synchronized. If any non-synchronized settings exist, release the settings, and then retry the operation. If the error occurs again, download all the management log files and contact Product Support. For a list of management log files, see Help.
KAQM05075-E	An attempt to edit trunking has failed. (port= <i>port-name</i>)	The trunking configuration that you tried to edit has been recreated in a different configuration. <i>port-name</i> The name of the port that has been recreated with a different configuration

Message ID	Message	Description and Action
		(O) Check the trunking configuration in the List of Trunking Configurations window.
KAQM05076-E	An attempt to release trunking has failed. (port= <i>port-name</i>)	The trunking configuration that you tried to release has been recreated in a different configuration. <i>port-name</i> The name of the port that has been recreated with a different configuration (O) Check the trunking configuration in the List of Trunking Configurations window.
KAQM05077-E	The specified negotiation mode could not be set. (network port name = <i>the-name-of-the-data-port-for-which-an-attempt-to-set-the-negotiation-mode-failed</i>)	A hardware error might have occurred. (O) Check whether a hardware error has occurred. If a hardware error has not occurred, acquire all of the Management log files and contact maintenance personnel. For details about the list of Management log files, see Help.
KAQM05078-E	The negotiation mode could not be acquired. (network port name = <i>the-name-of-the-data-port-for-which-an-attempt-to-acquire-the-negotiation-mode-failed</i>)	A hardware error might have occurred. (O) Check whether a hardware error has occurred. If a hardware error has not occurred, acquire all of the Management log files and contact maintenance personnel. For details about the list of Management log files, see Help.
KAQM05079-E	An attempt to write to the system file (<i>negmode.conf</i>) has failed.	There might be a problem in an OS disk or in system-file processing. (O) Check the OS disk settings and check whether a problem exists on the OS disk, and then try again. If the error occurs again, acquire all of the Management log files, and then contact maintenance personnel. For details about the list of Management log files, see Help.
KAQM05080-E	There is an error in the negotiation-mode specification.	The negotiation-mode specification is invalid. (O) Specify a valid negotiation mode.

Message ID	Message	Description and Action
KAQM05081-E	The resource group is not stopped.	The resource group is not in the Offline state. (O) Place the resource group in the Offline state, and then try again.
KAQM05082-I	A negotiation mode has been set for the specified data port. (data port name = <i>the-name-of-the-data-port-for-which-negotiation-was-set</i> , negotiation mode = <i>the-value-set-for-the-negotiation-mode</i>)	A negotiation mode has been set for the specified data port. (O) No action is required.
KAQM05083-W	There is a conflict with the negotiation mode.	The negotiation mode does not match the contents of the system file. (O) Set the negotiation mode in the Negotiation Mode Setup window. If an error occurs after trying again, acquire all of the Management log files, and then contact maintenance personnel. For details about the list of Management log files, see Help.
KAQM05084-E	The specified data port does not exist. (data port name = <i>the-name-of-the-data-port-for-which-an-attempt-to-specify-the-settings-failed</i>)	There might be a problem in an OS disk or in system-file processing. (O) Check the OS disk settings and check whether a problem exists on the OS disk, and then try again. If the error occurs again, acquire all of the Management log files, and then contact maintenance personnel. For details about the list of Management log files, see Help.
KAQM05086-E	The specified trunking port cannot be created. (port = <i>port-that-cannot-be-created</i>)	The trunking configuration might have been modified by another system administrator. (O) Check the trunking configuration in the List of Trunking Configurations window.
KAQM05088-E	An attempt to synchronize time with the specified NTP server has failed.	A mistake may exist in the specified NTP server. (O) Check the entry for the specified NTP server. Check the specified NTP server is correctly operating when the entry is correct.
KAQM05089-E	The node has not stopped.	This node is not in the INACTIVE state.

Message ID	Message	Description and Action
		(O) Make sure that the cluster, nodes, and resource groups are in the correct states, and then try again.
KAQM05091-E	The <i>item-name</i> entry is invalid.	The entered value is invalid. (O) Check the entry, and enter a valid value. Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM05094-E	Information about the media type could not be acquired. (data port name = <i>the-name-of-the-data-port-for-which-an-attempt-to-acquire-the-media-type-failed</i>)	A hardware error might have occurred. (O) Check whether a hardware error occurred, and then try again. If the error occurs again, acquire all of the Management log files, and then contact maintenance personnel. For details about the list of Management log files, see Help.
KAQM05095-E	The specified routing entry does not exist.	There is an error in the specified contents, or the routing information has already been deleted. (O) Specify valid routing information.
KAQM05096-Q	Do you want to delete the specified interface? (y/n)	This confirmation message is output before an interface is deleted. (O) Enter y or n.
KAQM05097-Q	Do you want to delete all the interfaces? (y/n)	This confirmation message is output before all interfaces are deleted. (O) Enter y or n.
KAQM05098-I	The interface (<i>deleted-interface-name</i>) was deleted.	This message appears when the interface is deleted. (O) None.
KAQM05099-Q	Do you want to delete the specified routing information? (y/n)	This confirmation message appears before the routing information is deleted. (O) Enter y or n.
KAQM05100-Q	Do you want to delete all routing information? (y/n)	This confirmation message appears before all routing information is deleted.

Message ID	Message	Description and Action
		(O) Enter y or n.
KAQM05101-I	The routing information (<i>deleted-routing-information</i>) was deleted.	This message appears when the routing information is deleted. (O) None.
KAQM05102-W	There is a conflict with the negotiation mode. (port name = <i>the-name-of-the-port-where-contradiction-is-generated</i>)	The negotiation mode does not match the contents of the system file. (O) Check and, if necessary, revise the negotiation mode settings. If the error occurs again, acquire all of the Management log files, and then contact maintenance personnel. For details about the list of Management log files, see Help.
KAQM05103-E	An attempt to delete the routing information (<i>routing-information</i>) has failed, because the host name (<i>host-name</i>) could not be resolved.	The specified routing information includes a host name that cannot be resolved. (O) Check and, if necessary, revise the settings so that the host name can be resolved, and then try again.
KAQM05104-E	An attempt to delete the routing information has failed. (routing information = <i>routing-information</i>).	An error occurred during command processing, or an unexpected error occurred during setting of the routing information. (O) Make sure that the OS in the cluster has not stopped, and make sure that no network errors have occurred. If you cannot resolve the problem, acquire all of the Management log files, and then contact maintenance personnel. For details about the list of Management log files, see Help.
KAQM05105-E	Trunking using the specified ports cannot be created.	The media types are different among the specified ports. (O) Make sure that the same media type is selected for all ports used for trunking, and then retry the operation.
KAQM05106-E	Routing information cannot be deleted because no netmask is specified.	No netmask is specified. (O) Specify a netmask, and then retry execution.

Message ID	Message	Description and Action
KAQM05107-I	The connection with a node was cut because the settings of management port have been changed. To log into node, retry the operation.	The connection with a node was cut because the settings of management port have been changed. (O) Wait for 5 minutes, and then log in again.
KAQM05111-E	An entry for an NTP server is invalid.	An entered value is invalid. (O) Make sure that the entry for the specified NTP server is valid.
KAQM05112-E	The entry for the current time is invalid.	The entered value is invalid. (O) Make sure that the specified current time is valid.
KAQM05113-E	The interface of the heartbeat port or of an internally-used port cannot be specified. (interface = <i>unusable-interface</i>)	The interface of the heartbeat port or of an internally-used port cannot be specified. (O) Specify the interface of the data port.
KAQM05114-E	The interface of the heartbeat port or an internally-used port cannot be specified. (interface = <i>unusable-interface</i>)	The interface of the heartbeat port or an internally-used port cannot be specified. (O) Specify the interface of the data port or management port.
KAQM05115-E	The format of the specified IP address is invalid. (IP address= <i>error-IP-address</i>)	The specified value is invalid. (O) Specify this in IP address format.
KAQM05116-E	The format of the specified host name or IP address is invalid. (host name or IP address= <i>error-host-name-or-error-IP-address</i>)	The specified value is invalid. (O) Specify with alphanumeric characters, periods (.) or hyphens (-) (the beginning can only be an alphabetic character and the end can only be an alphanumeric character) or in IP address format.
KAQM05117-E	An IP address that was specified when the interface was set up is duplicated. (IP address= <i>duplicated-IP-address</i>)	An IP address that was specified when the interface was set up is duplicated. (O) When setting up an interface, do not specify duplicate IP addresses.
KAQM05118-E	The number of interfaces has reached the maximum.	The operation cannot be executed because the number of interfaces has reached the maximum. (O)

Message ID	Message	Description and Action
		Delete unnecessary interfaces, and then retry the operation.
KAQM05119-E	An attempt to acquire the resource group status has failed.	An error in the failover function or a hardware error might have occurred. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM05120-E	The virtual server is not stopped. (virtual server name= <i>virtual-server-name</i>)	The virtual server is not in the Offline state. (O) Place the virtual server in the Offline state, and then try again.
KAQM05121-E	The entered virtual server name is incorrect. (virtual server name= <i>virtual-server-name</i>)	The specified data syntax is incorrect. (O) Specify with alphanumeric characters or hyphens (-) (the beginning can only be an alphabetic character).
KAQM05122-E	The specified virtual server does not exist. (virtual server name= <i>virtual-server-name</i>)	The specified virtual server does not exist. (O) Specify a valid virtual server, and then retry the operation.
KAQM05123-E	Specify the IP addresses of virtual servers such that IP addresses are set up for the interfaces of the management ports of all the virtual servers.	There is a virtual server that does not have an IP address set up for the interface of its management port. (O) Specify the IP addresses of virtual servers such that IP addresses are set up for the interfaces of the management ports of all the virtual servers.
KAQM05124-E	Specification of network information has failed. The node or virtual server state might be incorrect.	The target virtual server was deleted, the virtual server was in an incorrect state, or an unexpected error occurred during acquisition or deletion of network information of a virtual server. (O) Make sure that the target virtual server exists and that all the virtual servers are in the correct state, and then retry the operation. In addition, make sure that node has not stopped in the cluster and that no network errors are occurring. If the problem occurs again, acquire all the Management log files, and then contact maintenance personnel. See

Message ID	Message	Description and Action
		the Help for a list of the Management log files.
KAQM05126-E	Specification of network information has failed. There might be a heavy load on the system.	There might be a heavy load on the system or a system error might have occurred. (O) Execute the same processing again after waiting. Acquire all the Management log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM05127-E	The change was not reflected in at least one service on the node or virtual server. (node name= <i>name-of-the-node-on-which-processing-failed</i> , virtual server name= <i>name-of-the-virtual-server-on-which-processing-failed</i>)	The virtual IP address was set but the change was not reflected in at least one service on the node or virtual server. (O) Check the node and virtual server system messages to see if any errors occurred. If a system message was output, follow the instructions in the message. If a system message was not output, restart the OS on the node or the virtual server for which processing failed.
KAQM05128-E	The cluster status is invalid.	The cluster is not in the ACTIVE or INACTIVE state. (O) Make sure that the status of the cluster or the operated node is valid, and then retry the operation.
KAQM05129-E	The resource group status is invalid.	The resource group is not in the Online/No error, Offline/No error, or Online Maintenance/No error state. (O) Make sure that the status of the resource group is valid, and then retry the operation.
KAQM05131-E	An attempt to set the virtual IP address (service IP address) for a resource group has failed.	The LAN cable might be disconnected, a network error might have occurred, or (during setup of the virtual IP address for the resource group) an unexpected error might have occurred. (O) Make sure that the LAN cable is correctly connected and there are no network errors. If this does not resolve the problem, acquire all the

Message ID	Message	Description and Action
		Management log files, and then contact maintenance personnel. See the Help for a list of the Management log files.
KAQM05133-E	The virtual IP address (service IP address) for the resource group or the virtual server could not be set, because a link down error occurred on the data port or the network configuration is invalid.	The LAN cable might be disconnected, a network error might have occurred, or the network configuration might be invalid. Alternatively, the link-up processing on the port might have failed after setup of the fixed IP address or MTU. (O) Make sure that the LAN cable is correctly connected and there are no network errors. In addition, make sure that no problem exists in the network configuration. If this does not resolve the problem, set just the fixed IP address or MTU, wait, then set a virtual IP address for the resource group. If this does not resolve the problem, download all the management log files and contact Product Support. For a list of management log files, see Help.
KAQM05134-E	Trunking settings were edited, but an attempt to restore the virtual IP address (service IP address) of the resource group or virtual server has failed.	An unexpected error might have occurred while the virtual IP address of the resource group or virtual server was being restored. (O) Add the virtual IP address for which restoration failed by using the interface editing function. If an error occurs while the virtual IP address is being edited by using the interface editing function, follow the instructions in the message.
KAQM05135-E	A specified DNS server is invalid.	A specified value is invalid. (O) Make sure that the specified DNS servers are valid.
KAQM05136-E	The specified default domain name is invalid.	The specified value is invalid. (O) Make sure that the specified default domain name is valid.
KAQM05137-E	A specified NIS server is invalid.	A specified value is invalid. (O) Make sure that the specified NIS servers are valid.

Message ID	Message	Description and Action
KAQM05138-E	The specified NIS domain is invalid.	The specified value is invalid. (O) Make sure that the specified NIS domain is valid.
KAQM05139-E	A specified LDAP server is invalid.	A specified value is invalid. (O) Make sure that the specified LDAP servers are valid.
KAQM05140-E	A specified LDAP server port number is invalid.	A specified value is invalid. (O) Make sure that the specified LDAP server port numbers are valid.
KAQM05141-E	The specified root DN is invalid.	The specified value is invalid. (O) Make sure that the specified root DN is valid.
KAQM05142-E	The specified administrator DN is invalid.	The specified value is invalid. (O) Make sure that the specified administrator DN is valid.
KAQM05143-E	The specified administrator password is invalid.	The specified value is invalid. (O) Make sure that the specified administrator password is valid.
KAQM05152-E	The specified time zone does not exist.	The specified value is invalid. (O) Make sure that the specified time zone is valid.
KAQM05153-Q	If you change the node time, you must then restart the OS on both nodes. Do you want to continue? (y/n)	This confirmation message is output before the NTP server time or current node time is set. (O) Enter y or n.
KAQM05154-I	The node time was successfully synchronized with the NTP server. The node time has changed.	The node time was successfully synchronized with the NTP server. The node time has changed. (O) No action is required.
KAQM05156-E	An attempt to synchronize the node time with the NTP server has failed.	There might be an error in the NTP server settings, or communication with the NTP server might have failed. (O) Check the NTP server settings. If the settings are correct, check the

Message ID	Message	Description and Action
		connection status with the NTP server, and then restart the OS. If the error occurs again, acquire all the Management log files, and then inform maintenance personnel. For a list of the Management log files, see online Help.
KAQM05157-E	The IP address of the other node in a cluster cannot be specified if the cluster is not defined.	A cluster configuration has not been defined, or a specified value is invalid. (O) Define a cluster configuration, check the command format, correctly specify the parameters, and then try again.
KAQM05158-E	The specified IP address cannot be used because it is already in use. (IP address = <i>duplicated-IP-address</i>)	The specified IP address is already in use. (O) Check the interface settings. If the specified IP address is already in use, specify a different IP address. In other cases, contact maintenance personnel.
KAQM05159-E	The network identified by the specified IP address and netmask cannot be used because it is already in use. (network address = <i>duplicated-network-address</i>)	The network identified by the specified IP address and netmask is already in use. (O) Check the interface settings. If the network identified by the specified IP address and netmask is already in use, specify a different IP address or netmask. In other cases, contact maintenance personnel.
KAQM05161-E	The BMC port IP address cannot be set because the network address generated from the specified IP address and netmask is different from the management port network address. (BMC port network address = <i>BMC-port-network-address</i> , management port network address = <i>management-port-network-address</i>)	The network address generated from the specified IP address and netmask is different from the management port network address. (O) Specify a fixed IP address and netmask so that the BMC port network address is the same as the management port network address.
KAQM05162-E	The network address cannot be changed because the fixed IP address of one of the nodes has not been specified.	The network address cannot be changed because the fixed IP address of one of the nodes has not been specified. (O) Specify fixed IP addresses for both nodes, making it possible to change the network address.

Message ID	Message	Description and Action
KAQM05168-E	The MTU of the management port cannot be changed.	The MTU of the management port cannot be changed. (O) Do not specify an MTU, and then try again.
KAQM05169-I	The connection with a node was cut because the settings of the management port was changed. Wait a while, and then retry the operation.	The connection with a node was cut because the settings of the management port was modified. (O) Wait a while, and then log in again.
KAQM05171-E	The IP address of the BMC port cannot be set because the network address of the specified IP address differs from the network address of the maintenance port. (BMC port network address = <i>BMC-port-network-address</i> , maintenance port network address = <i>maintenance-port-network-address</i>)	The network address of the specified IP address differs from the network address of the maintenance port. (O) Specify the IP address of the BMC port so that the network addresses are the same for both the BMC port and the maintenance port.
KAQM05176-Q	If you change the node time, you must then restart the OS to apply the changed setting. Do you want to continue? (y/n)	This confirmation message is output before the NTP server time or current node time is set. (O) Enter y or n.
KAQM05177-E	The specified routing entry already exists.	The specified target is the same as that of a route that is used by the system. (O) In the routing settings in the node, check whether a route with the specified target already exists and whether the routing settings in the cluster have been synchronized. Use the <code>routelist -l</code> command to check the routes that are used by the system. If the target you specified already exists in the routing settings, specify the target of a different route. If the routing settings in the cluster have not yet been synchronized, delete the routes, and then add routes again.
KAQM05178-E	The specified virtual server name is duplicated. (virtual server name = <i>virtual-server-name</i>)	The specified virtual server name is duplicated. (O) Confirm the specified virtual server name, and then try again.

Message ID	Message	Description and Action
KAQM05179-E	The operation cannot be performed because a virtual server that is assigned only the interface for the operation is online. (interface = <i>specified-interface</i> , virtual server name = <i>specified-virtual-server</i>)	If the interface is being set up or deleted, all virtual servers that are assigned only the interface for the operation must be stopped. (O) Stop the target virtual server, or set the IP address to another port, and then try again.
KAQM05180-E	The operation cannot be performed because the virtual server has reached the maximum number of registered virtual IP addresses (service IP addresses).	The virtual server has reached the maximum number of registered virtual IP addresses. (O) Delete the selected virtual IP addresses, and try again.
KAQM05181-E	Processing of the failover function has failed.	The failover function returned an error. (O) Check the node and virtual server system messages to see whether an error occurred. If a KAQM35nnn message was output to the system messages, take action as recommended by the system. If no error messages appeared, download all the management log files and cluster log files, and contact Product Support. For a list of these files, see Online Help.
KAQM05182-E	The operation cannot be performed because the version of the program on the virtual server does not match the version of the program on the physical node.	The version of the program on the physical node might be older than the version of the program on the virtual server. (O) Download all the log data of the physical node and the virtual server, and contact Product Support.
KAQM05183-E	The virtual IP address (service IP address) of the specified virtual server has been set for the specified protocol interface. (interface = <i>specified-interface</i> , virtual server name = <i>specified-virtual-server</i>)	The virtual IP address of the specified virtual server has been set for the specified protocol interface. (O) Confirm the specified virtual server name, and try again.
KAQM05185-E	The IP address cannot be removed because the specified interface is not set up as a dual-stack interface.	An attempt was made to remove the IP address setting for an interface that does not have the dual stack setting. (O) Confirm the specified interface setting.

Message ID	Message	Description and Action
KAQM05186-E	If an IP address different from the specified protocol version is added, a netmask (prefix length) must be specified.	One or more necessary items are not specified. (O) Specify all necessary items.
KAQM05187-E	Routing information cannot be added because an interface of the specified protocol version is not set.	The interface of the specified protocol version could not be set. (O) Set an interface of the specified protocol version.
KAQM05188-E	The IPv4 address in the private maintenance port cannot be removed.	The IPv4 address in the maintenance port cannot be removed. (O) Check the specified data, and then specify valid data.
KAQM05192-E	A trunking configuration cannot be created because a virtual server that is assigned only the specified port is online. (interface = <i>target-port</i> , virtual server name = <i>target-virtual-server-name</i>)	If a trunking configuration is being created, all virtual servers that are assigned only the interface for the operation must be stopped. (O) Stop the target virtual server, or set the IP address to another port, and try again.
KAQM05193-E	The IPv4 address setting of the management port cannot be deleted.	The IPv4 address setting of the management port cannot be deleted. (O) Verify the specified data and modify it as necessary.
KAQM05194-E	The entered prefix length is invalid.	The specified data syntax is incorrect. (O) Specify within the numeric range of 0 to 128.
KAQM05195-E	The trunking configuration cannot be released because a virtual server that is assigned only the specified port is online. (interface = <i>specified-port</i> , virtual server name = <i>target-virtual-server-name</i>)	If a trunking configuration is being released, all virtual servers that are assigned only the interface for the operation must be stopped. (O) Stop the target virtual server, or set the IP address to another port, and try again.
KAQM05196-E	The trunking configuration cannot be edited because a virtual server that is assigned only the specified trunking port is online. (interface = <i>specified-port</i> , virtual server name = <i>target-virtual-server-name</i>)	If a trunking configuration is being edited, all virtual servers that are assigned only the interface for the operation must be stopped. (O)

Message ID	Message	Description and Action
		Stop the target virtual server, or set the IP address to another port, and try again.
KAQM05197-E	An attempt to set the virtual IP address (service IP address) for the virtual server failed because there is not enough space on the OS disk or virtual server OS LU.	The free space for the OS disk or virtual server OS LU might be insufficient. (O) Delete a number of core files and log files, and try again. If this error persists, contact Product Support.
KAQM05198-E	No IPv6 address is set.	No IPv6 address is set. (O) Check the specified data, and then specify valid data.
KAQM05199-E	The maximum segment size cannot be set for IPv6 address routing.	The maximum segment size cannot be set for IPv6 address routing. (O) Check the specified data, and then specify valid data.
KAQM05200-Q	The interface in the IPv6 address will be released. Do you want to proceed? (y/n)	(O) Enter "y" to proceed, or "n" to cancel.
KAQM05201-E	An IP address of the specified protocol version is already set.	An IP address of the specified protocol version is already set. (O) Verify the specified data and modify it as necessary.
KAQM05202-Q	Do you want to delete the specified IP address of this protocol version? (y/n)	This confirmation message is output before the IP address or addresses are deleted. (O) Enter "y" to proceed, or "n" to cancel.
KAQM05205-E	The setting of the IPv4 address of management port cannot be added.	The setting of the IPv4 address of management port cannot be added. (O) Verify the specified data and modify it as necessary.
KAQM05206-E	The specified IP address of this protocol version is not set.	The specified IP address of this protocol version is not set. (O) Verify the specified data and modify it as necessary.
KAQM05207-I	The management port interface is not set.	The management port interface is not set. (O)

Message ID	Message	Description and Action
		Set the management port interface.
KAQM05209-W	Deletion of the routing information ended normally on the processing node, but failed on the other node. (routing information = <i>routing-information</i>)	Communication between the nodes might have failed because a LAN cable was disconnected, one of the nodes in the cluster was heavily loaded, or the OS on the other node in the cluster was not running. (O) Make sure that the LAN cable is connected, the load on the node in the cluster has returned to a normal state, and the OS on the other node in the cluster is running. If there is routing information that is no longer needed on the other node in the cluster, try to delete the routing information again.
KAQM05210-W	Deletion of the routing information ended normally on the processing node, but failed on the other node.	Communication between the nodes might have failed because a LAN cable was disconnected, one of the nodes in the cluster was heavily loaded, or the OS on the other node in the cluster was not running. (O) Make sure that the LAN cable is connected, the load on the node in the cluster has returned to a normal state, and the OS on the other node in the cluster is running. If there is routing information that is no longer needed on the other node in the cluster, try to delete the routing information again.
KAQM05211-E	The protocol version of the specified IP addresses and netmask (prefix length) do not match.	The protocol version of the specified IP addresses and netmask (prefix length) do not match. (O) Unify the specified values to one protocol version format, and then execute a command that corresponds to the specified values.
KAQM05212-I	The setting of the management port was canceled because none of the items are set.	None of the items are set. (O) No action is required.
KAQM05213-E	The operation cannot be performed because one or more virtual IP addresses (service IP address) are set for the specified interface as additional addresses. Use the <code>altiplist</code> command to check the virtual IP address settings.	A virtual IP address is set for the specified interface as an additional address. (O) If necessary, delete all the virtual IP addresses set as additional addresses on the interface, and then retry the operation.

Message ID	Message	Description and Action
KAQM05214-E	The operation cannot be performed because the specified virtual IP address is not set as an additional virtual IP address. (IP address = <i>IP-address</i>)	The virtual IP address which was not set as an additional address was specified. (O) Check the virtual IP address set as additional addresses, and then specify a valid IP address.
KAQM05215-I	The virtual IP address (service IP address) is not set as an additional address.	The virtual IP address (service IP address) is not set as an additional address. (O) No action is required.
KAQM05217-Q	Do you want to delete the specified virtual IP addresses (service IP addresses)? (y/n)	This confirmation message is output before IP addresses are deleted. (O) Enter y or n.
KAQM05218-Q	Do you want to delete all the virtual IP addresses (service IP addresses) set as additional addresses? (y/n)	This confirmation message is output before all the virtual IP addresses (service IP addresses) set as additional addresses are deleted. (O) Enter y or n.
KAQM05219-I	The virtual IP addresses (service IP addresses) set for the interface (<i>interface</i>) as additional addresses were deleted. (IP address = <i>IP-address</i>)	This message is output when the virtual IP addresses set for the interface as additional addresses are deleted. (O) No action is required.
KAQM05220-I	The virtual IP addresses (service IP addresses) are set as additional addresses. Use the <code>altiplist</code> command to check the virtual IP addresses set as additional addresses.	The virtual IP addresses are set as additional addresses. (O) To configure the interface settings, delete all the virtual IP addresses set as additional addresses in the interface you want to configure settings for.
KAQM05221-E	The same IP address was specified more than once. (IP address = <i>IP-address</i>)	The same IP address was specified more than once. (O) Specify an IP address that has not already been specified.
KAQM05222-E	The specified IP address is in a different network than the specified interface. (IP address = <i>IP-address</i>)	The specified IP address is in a different network than the specified interface. (O) Specify a valid IP address.

Message ID	Message	Description and Action
KAQM05223-E	The maximum number of virtual IP addresses (service IP addresses) that can be set as additional addresses for the specified interface has been reached.	The operation cannot be executed because the maximum number of virtual IP addresses has been reached. (O) Delete any unnecessary virtual IP addresses, and try again.
KAQM05224-E	The management port cannot be specified.	The management port cannot be specified. (O) Specify the data port interface.
KAQM05225-I	The specified virtual IP address (service IP address) was deleted.	This message is output when a virtual IP address is deleted. (O) No action is required.
KAQM05226-Q	The network configuration will be changed to connect the BMC port to the IP switch and give the management and BMC ports unique network addresses. Are you sure you want to continue? (y/n)	This message is output when the network configuration will be changed so that the BMC port is connected to the IP switch. (O) Enter y or n.
KAQM05227-Q	The network configuration will be changed so that the BMC port is connected to pm1 because the management port and the BMC port have different network addresses. Are you sure you want to continue? (y/n)	This message is output when the network configuration will be changed so that the BMC port is connected to pm1. (O) Enter y or n.
KAQM05228-W	The BMC port settings were completed, but an attempt to communicate with the BMC port on the other node failed.	There might be a problem with the BMC LAN cable, or an error might have occurred in the BMC. If pm1 is connected to the BMC port, then there might be a problem with the pm1 LAN cable, or an error might have occurred in pm1. (O) Make sure that the LAN cable is properly connected. If there are no problems, contact maintenance personnel.
KAQM05229-E	The network address defined by the specified IP address and netmask cannot be set because it is already in use on the virtual server that the interface is being set up for. (network address = <i>network-address</i>)	The network address defined by the specified IP address and netmask is already in use on the virtual server that the interface is being set up for. (O) Check the interface settings. If the network address defined by the

Message ID	Message	Description and Action
		specified IP address and netmask is already in use on the virtual server that the interface is being set up for, specify a different IP address or netmask. In all other cases, contact maintenance personnel.
KAQM05230-E	The specified IP address cannot be set because it is already in use on the virtual server that the interface is being set up for. (IP address = <i>IP-address</i>)	The specified IP address is already in use on the virtual server that the interface is being set up for. (O) Check the interface settings. If the specified IP address is already in use on the virtual server that the interface is being set up for, specify a different IP address. In all other cases, contact maintenance personnel.
KAQM05231-E	The specified IP address cannot be set because it is already in use on the physical node. (IP address = <i>IP-address</i>)	The specified IP address is already in use on the physical node that the interface is being set up for. (O) Check the interface settings. If the specified IP address is already in use in the cluster, specify a different IP address. In all other cases, contact maintenance personnel.
KAQM05232-E	The fixed IP address cannot be changed because it is set for only one node.	The fixed IP address cannot be changed because it is set for only one node. (O) To change the fixed IP address, specify the fixed IP address for both nodes.
KAQM05233-E	The specified virtual server is not running properly. (virtual server = <i>virtual-server-name</i>)	The virtual server is not in the Online status or the Partial online status. (O) Confirm the status of the virtual server, and then retry the operation.
KAQM05234-E	Routing information cannot be added because neither a fixed IP address nor a virtual IP address is set for the specified interface.	Routing information cannot be added because neither a fixed IP address nor a virtual IP address is set for the specified interface. (O) Set either a fixed IP address or a virtual IP address for the specified interface.
KAQM05235-E	The setting of routing information for the virtual server failed. (virtual server = <i>virtual-server-name</i> , cause = <i>error-message</i>)	The setting of routing information for the virtual server failed. (O) Take action according to the message displayed for the cause.

Message ID	Message	Description and Action
KAQM05236-E	Acquisition of routing information for the virtual server failed. (virtual server = <i>virtual-server-name</i> , cause = <i>error-message</i>)	Acquisition of routing information for the virtual server failed. (O) Take action according to the message displayed for the cause.
KAQM05237-E	A virtual server was specified that is not allocated to the specified interface.	A virtual server was specified that is not allocated to the specified interface. (O) Check the IP address settings for the specified virtual server, and then retry the operation.
KAQM05238-E	A fixed IP address was not specified for the management port.	A fixed IP address was not specified for the management port. (O) Specify a fixed IP address for the management port, and then retry the operation.
KAQM05239-E	The specified IP address cannot be set because it is already in use on the same interface. (IP address = <i>IP-address</i>)	The specified IP address is already in use on the same interface. (O) Check the interface settings. If the specified IP address is already in use on the same interface, specify a different IP address. In all other cases, contact maintenance personnel.
KAQM05240-E	The network address defined by the specified IP address and netmask is in use on the physical node. (network address = <i>network-address</i>)	The network address defined by the specified IP address and netmask is in use on the physical node. (O) Check the interface settings. If the network address defined by the specified IP address and netmask is already in use on the physical node, specify a different IP address or netmask. In all other cases, contact maintenance personnel.
KAQM05241-E	The specified routing settings cannot be deleted because the system is using them.	The system is using the specified routing settings. (O) Specify routing information not being used by the system.
KAQM05242-W	The system file was successfully edited, but a test email failed to be sent.	The configuration file might contain a mistake, or communication with the SMTP server might have failed. (O) Confirm that the contents of the configuration file are correct. Also, confirm that the SMTP server is

Message ID	Message	Description and Action
		running normally and that there are no problems with the network. After that, retry the operation. If the problem persists, contact maintenance personnel.
KAQM05243-W	The system file was edited, but because a required item was not set, no test email was sent. (item name = <i>item-name</i>)	A required item is not set. (O) Set the required item.
KAQM05245-W	The system file was edited, but the sending of the test email is taking some time.	The configuration file might contain a mistake, or the SMTP server might be taking a while to forward emails. (O) Confirm that the test email can be received by the set recipient email addresses. If the test email does not arrive within five minutes, check the configuration file contents. If there are no problems with the configuration file, confirm the following: (1) Name resolution of the SMTP server has not failed. (2) There are no problems communicating with the SMTP server. (3) The SMTP server is running properly.
KAQM05246-E	The operation cannot be performed because the specified interface is configured to use DHCP.	The specified interface is configured to use DHCP. (O) To manually set an IP address, configure the target interface to not use DHCP, and then specify the IP address.
KAQM05247-E	The operation cannot be performed because the specified interface has DHCP settings that are pending application to the system.	The specified interface has DHCP settings that are pending application to the system. (O) Specify the <code>--cancel</code> option to cancel application of the pending DHCP settings, and then retry the operation.
KAQM05250-Q	The data will be encrypted. If you enable the encryption functionality, you cannot disable it after starting operations. Do you want to continue? (y/n)	This message appears before the data encryption functionality is enabled. (O) Enter y or n.
KAQM05251-E	A data encryption key cannot be generated because one or	A data encryption key cannot be generated because one or more file systems already exist.

Message ID	Message	Description and Action
	more file systems already exist.	(O) Delete all the file systems, and then retry the operation.
KAQM05252-E	A data encryption key cannot be generated because one or more virtual servers already exist.	A data encryption key cannot be generated because one or more virtual servers already exist. (O) Delete all the virtual servers, and then retry the operation.
KAQM05254-E	No data encryption license is set.	No data encryption license is set. (O) Set a license.
KAQM05255-E	A local data encryption key cannot be generated because one or more volume groups already exist.	A local data encryption key cannot be generated because one or more volume groups already exist. (O) Delete all the volume groups except vg0, and then retry the operation.
KAQM05256-E	The user LU could not be connected to the node. The local data encryption key might be corrupted.	The local data encryption key might be corrupted. (O) Acquire all the log data, and then contact maintenance personnel.
KAQM05258-E	The local data encryption key could not be acquired from the HCP system, because resolution of the HCP host name failed.	Name resolution was not executed properly. (O) Make sure that the network environment is able to resolve the HCP host name, and then restart the OS. Details: If a remote HCP system cannot be accessed in an environment where a system is connected to the HCP system over a network, determine the cause of the problem, and then resolve the problem. Before taking action according to the message, see the <i>Troubleshooting Guide</i> .
KAQM05259-E	The local data encryption key could not be acquired from the HCP system, because an attempt to connect to HCP failed.	Specified HCP information might be incorrect, or there might be a problem with the HCP system or the network. (O) Revise the HCP settings. Afterward, check the status of the HCP system and the network, resolve the cause of the error, and then restart the OS. If the error persists, acquire all log data,

Message ID	Message	Description and Action
		<p>and then contact maintenance personnel.</p> <p>Details:</p> <p>If a remote HCP system cannot be accessed in an environment where a system is connected to the HCP system over a network, determine the cause of the problem, and then resolve the problem. KAQM05263-E	The local data encryption key could not be acquired from the HCP system, because authentication with the HCP system failed.	<p>The user name, password, tenant, namespace, or SSL setting is invalid.</p> <p>(O)</p> <p>Make sure that the HCP settings are correct, and then restart the OS.</p> <p>Details:</p> <p>If a remote HCP system cannot be accessed in an environment where a system is connected to the HCP system over a network, determine the cause of the problem, and then resolve the problem. Before taking action according to the message, see the <i>Troubleshooting Guide</i>.</p>
KAQM05264-E	The local data encryption key could not be acquired from the HCP system, because an internal error occurred.	<p>There might be a problem in the internal processing.</p> <p>(O)</p> <p>Acquire all log data, and then contact maintenance personnel.</p>
KAQM05267-E	The specified interface cannot use DHCP because the interface is configured with an IPv6 address.	<p>An interface that is configured with an IPv6 address cannot use DHCP.</p> <p>(O)</p> <p>Specify an interface that is not configured with an IPv6 address.</p>
KAQM05271-Q	Changes to the DHCP settings will be applied to the system. If you proceed, the node might become disconnected. Are you sure you want to apply the changes to the DHCP settings? (y/n)	<p>None</p> <p>(O)</p> <p>Enter y or n.</p>
KAQM05272-I	The settings have changed. To apply the changes to the system, either reload the DHCP configuration, or restart the OS.	<p>None</p> <p>(O)</p> <p>No action is required.</p>

Message ID	Message	Description and Action
KAQM05273-I	The node might be disconnected because the network settings were changed. If the node is disconnected, wait a few minutes, and then log in again.	The node might be disconnected because the network settings were changed. (O) Wait a few minutes, and then log in again.
KAQM05274-E	The specified interface has DHCP settings that are pending application to the system. Settings that differ from the pending settings cannot be specified.	Processing was terminated because settings were specified that differ from the settings that are pending application to the system. (O) Please check the DHCP settings. If you want to cancel the DHCP settings that are pending application to the system, specify the <code>--cancel</code> option.
KAQM05275-E	Failed to change the DHCP settings.	There is a problem with communication with the DHCP server, or there is a problem with the DHCP server configuration. (O) Check with the network administrator whether the DHCP server is configured correctly and running correctly. Make sure that there are no problems with the network, and then retry the operation. If the error occurs again, contact maintenance personnel.
KAQM05276-E	The specified routing information cannot be deleted because it was configured by DHCP.	The specified routing information cannot be deleted because it was configured by DHCP. (O) Ask the network administrator to change the routing settings on the DHCP server. After DHCP server configuration is complete, either reload the DHCP configuration on the node, or restart the OS.
KAQM05277-I	The DHCP settings that were pending application to the system were canceled.	None (O) No action is required.
KAQM05278-I	Default network settings were configured because DHCP could not be used.	Default network settings were configured because using DHCP to configure the network settings was not possible. (O) To use DHCP, check the connection environment with the network administrator. Then, when communication with the DHCP server

Message ID	Message	Description and Action
		is possible, either reload the DHCP configuration, or restart the OS.
KAQM05279-E	The status of UPnP settings could not be acquired or changed.	Processing was interrupted because either there is no network interface in the system, or no IP address is assigned to the management port. (O) Check whether the system properly detects the network interface. Also, check whether the IP address settings of the management port are correct. If you cannot identify a problem, retry the operation. If the error occurs again, contact maintenance personnel.
KAQM05280-I	The DNS settings changed. You must restart the OS.	None (O) No action is required.
KAQM05281-E	The operation could not be performed because the private maintenance port might not be implemented, or because a hardware malfunction might have occurred.	The private maintenance port might not be implemented, or a hardware malfunction might have occurred. (O) Check whether a hardware malfunction occurred. If a malfunction occurred, contact maintenance personnel.
KAQM05282-Q	Do you want to use DHCP? (y/n)	This message is displayed to confirm that you want to use DHCP. (O) Enter y or n.
KAQM05283-E	The specified interface is not using DHCP.	The specified interface is not using DHCP. (O) Check the settings of the specified interface.
KAQM05284-E	A network adapter whose negotiation mode cannot be changed is being used as the specified network port. (network port name = <i>network-port-name</i>)	A network adapter whose negotiation mode cannot be changed is being used as the specified network port. (O) Leave the negotiation mode as Auto.
KAQM05301-E	The operation cannot be performed because the data encryption function is not enabled.	The data encryption function is not enabled. (O) No action is required.
KAQM05303-E	The operation cannot be performed because the local data encryption key could not	The local data encryption key could not be acquired from the HCP system. (O)

Message ID	Message	Description and Action
	be acquired from the HCP system.	Check the status of the HCP system and the network, resolve the problem, and then restart the OS.
KAQM05304-E	The entered passphrase and confirmation passphrase do not match.	The passphrase and confirmation passphrase do not match. (O) Enter the same characters for the passphrase and confirmation passphrase, and then try again.
KAQM05305-E	The public key for data encryption does not need to be recovered because the system is operating normally.	The system is operating normally. (O) No action is required.
KAQM05306-E	The public key for data encryption could not be decrypted because the entered key or passphrase is incorrect.	The entered key or passphrase is incorrect. (O) Enter a correct key or passphrase.
KAQM05307-I	The entered key matches the public key for data encryption.	The entered key matches the public key for data encryption. (O) No action is required.
KAQM05308-W	The node processing the restoration of the public key for data encryption ended normally, but a restoration attempt by the other node in the cluster failed.	Communication between the nodes might have failed because a LAN cable was disconnected, one of the nodes in the cluster was heavily loaded, or the OS was not running on the other node in the cluster. (O) Make sure that the LAN cable is connected and the load on the nodes in the cluster has returned to a normal state, and then reboot the OS of the other node. If the OS on the other node in the cluster was not running, start the OS.
KAQM05320-E	An error occurred during the startup of a resource.	An attempt to start a system resource failed. (O) Determine the cause of the error by referring to the KAQM04186-E message or the KAQM35nnn messages that are output as system messages, and then resolve the problem by following the applicable messages.
KAQM05321-E	The entered key is too short or too long. Make sure there is no line break in the entered key.	The entered key is too short or too long. Make sure there is no line break in the entered key. (O)

Message ID	Message	Description and Action
		Enter a correct key that does not include any line breaks.
KAQM05322-I	Processing might take a while.	This message is output before processing that takes a while is executed. (O) No action is required.
KAQM05323-E	An attempt to create an encryption key for the data stored in the HCP system used for the virtual server failed.	An attempt to create an encryption key for the data stored in the HCP system used for the virtual server failed. (O) Acquire all the log data, and then contact maintenance personnel.
KAQM05325-W	The system settings were restored, but the encryption key was not recovered.	The system settings were restored, but the encryption key was not recovered. (O) Use the <code>hcuprecoverkey</code> command to recover the encryption key for the data stored in the HCP system.
KAQM05326-E	The specified network port is using a network adapter that does not support the negotiation mode settings. (network port name = <i>network-port-name</i>)	The specified network port is using a network adapter that does not support the negotiation mode settings. (O) Specify the negotiation mode on the host.
KAQM05328-Q	This will enable the security enhancement functionality. After the security enhancement functionality is enabled, it cannot be disabled. Are you sure you want to enable the functionality? (y/n)	This confirmation message is output before the security enhancement functionality is enabled. (O) Enter y or n.
KAQM05329-E	An attempt to configure the security enhancement functionality failed.	An attempt to configure the security enhancement functionality failed. (O) Retry execution. If the error occurs again, acquire all of the log data, and then contact maintenance personnel. Maintenance personnel will acquire the OS logs by using the <code>oslogget</code> command, and then contact the Support Center.
KAQM05330-Q	The SSL protocol settings will be changed, and the GUI and API services will restart. Are you sure you want to continue? (y/n)	This confirmation message is output before the SSL protocol settings are changed. (O) Enter y or n.

Message ID	Message	Description and Action
KAQM05331-E	The specified SSL protocol could not be disabled, because no other protocol is enabled.	At least one SSL protocol must be enabled. (O) Revise the specified information, and then try again.
KAQM05332-E	The SSL protocol settings could not be changed, because the GUI and API services failed to restart.	The GUI and API services failed to restart. (O) Try the operation again. If the problem persists, collect all log data, and then contact maintenance personnel.
KAQM05333-E	An attempt to update a system file failed.	There might be a problem in OS disk or in system-file processing. (O) Acquire all the log data, and then contact maintenance personnel.

KAQM06 messages

This section explains messages that have a message ID beginning with KAQM06, and the actions to be taken if such messages appear.

Table 5-4 KAQM06 messages

Message ID	Message	Description and Action
KAQM06001-E	A syntax error exists in the entered <i>item-name</i> .	The specified data syntax is incorrect. (O) Specify with alphanumeric characters, forward slash (/), periods (.), hyphens (-), underscores (_), colons (:), equal signs (=), or at marks (@) (the beginning cannot be an underscore (_)).
KAQM06002-E	A syntax error exists in the entered <i>item-name</i> .	The specified data syntax is incorrect. (O) Specify with an IP address.
KAQM06003-W	The product or license is not synchronized in the cluster.	The product or license is not synchronized in the cluster. (O) Follow the instructions given by the warning messages output as system messages, numbered KAQM06025-W, KAQM06027-W, or KAQM06105-W.
KAQM06004-E	An internal error occurred.	A problem may exist in the internal processing.

Message ID	Message	Description and Action
		(O) Acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files.
KAQM06015-E	The cluster, resource group, or virtual server has not stopped.	The resource group or virtual server is not in the Offline state, or the cluster is not in the INACTIVE state. (O) Make sure that the resource group and virtual server are in the Offline state and that the cluster and node are in the INACTIVE state, and then retry the operation.
KAQM06018-E	The processing of the failover function has failed.	The failover function returned an error. The processing of a cluster, node, resource group, or virtual server might be temporarily disabled. (O) Check the status of the clusters, nodes, resource groups, or virtual servers. If they are operating normally or are stopped, try the operation again. If this message is displayed when performing a manual failover, make sure that the failover-destination node has started. In other cases, check the system messages on both nodes to see whether a KAQG7nnnn or KAQM35nnn message was output. If one of these messages is output, take action according to the message. If a system message was not output, refer to the troubleshooting chapter in the online help and take appropriate action. If you cannot identify the cause, acquire all the Management log files and Cluster log files, and then inform maintenance personnel. See the help for a list of Management log files and Cluster log files.
KAQM06019-E	Nodes with the same Physical Node host name exist in the cluster.	More than one node with the same Physical Node host name exist in the cluster. (O) Request maintenance personnel to specify a unique Physical Node host name in the cluster. Note that Physical Node host names are case-insensitive.
KAQM06020-E	The network address of the following fixed IP address is	The network address of the displayed fixed IP address duplicates a network

Message ID	Message	Description and Action
	invalid. : <i>duplicated-IP-address</i>	address of an IP address reserved within the system. (O) Request maintenance personnel to change the fixed IP address so that it does not duplicate a network address of an IP address reserved within the system.
KAQM06021-E	The fixed IP address of the management port is invalid. (fixed IP address= <i>duplicated-IP-address</i>)	The fixed IP address of the management port is duplicated in the cluster. (O) Request maintenance personnel to change the fixed IP address of the management port so that no fixed IP addresses are duplicated in the cluster.
KAQM06024-W	Another user is using a resource of the status display processing.	Another user is exclusively using a resource of the status display processing, or an exclusively used node has stopped. (O) If no other error messages are displayed after clicking the button and before this message is displayed, the button operation has completed normally. To display the status display screen, wait a while, and then retry. If a processing node stops, wait about 15 minutes or boot the stopped node. Details: See G. <i>Actions for When a Timeout Occurs due to the Inability to Secure the Resources Used for Processing</i> , and follow the procedure that is listed.
KAQM06025-W	A node for which <i>product-name</i> has not been installed exists in the cluster.	The product is not installed on each node in the cluster. (O) Check the products installed on each node in the cluster, and install any necessary products.
KAQM06027-W	There are differing versions of <i>product-name</i> in the cluster.	The versions of the product on each node in the cluster are different. (O) Check the versions of the product installed on each node in the cluster, and then install the same version on each node.
KAQM06029-E	The virtual IP address (service IP address) is not specified in the cluster.	The virtual IP address is not specified in the cluster.

Message ID	Message	Description and Action
		(O) Specify one or more virtual IP addresses in the cluster.
KAQM06030-E	A virtual IP address (service IP address) is not specified for the selected resource group.	A virtual IP address is not specified for the selected resource group. (O) Specify one or more virtual IP addresses for the selected resource group.
KAQM06041-E	The specified host name is invalid. (host name = <i>host-name</i>)	The specified host name is invalid. (O) Specify a host name that is no more than 15 characters and includes only alphanumeric characters and hyphens (-). The first character must be an English letter, and the last character must be an alphanumeric character.
KAQM06042-E	The same Physical Node host name has been specified twice. (Physical Node host name= <i>node-name</i>)	The same Physical Node host name has been specified twice. (O) Specify the Physical Node host names so that each name is unique in the cluster. Note that Physical Node host names are case-insensitive.
KAQM06043-E	The specified Physical Node host name already exists in another node in the cluster. (Physical Node host name= <i>node-name</i>)	The specified Physical Node host name has already been set for another node in the cluster. (O) Specify a Physical Node host name that has not been set for a node or virtual server in the cluster. Note that Physical Node host names are case-insensitive.
KAQM06044-E	The specified Physical Node host name already exists in a node in another cluster of the system. (Physical Node host name= <i>node-name</i>)	The specified Physical Node host name has already been set for a node in another cluster of the system. (O) Specify a Physical Node host name that has not been set for a node in another cluster of the system. Note that Physical Node host names are case-insensitive.
KAQM06050-E	The cluster is not operating.	The cluster status is not ACTIVE. (O) Check the cluster status, start the cluster, and then try again.
KAQM06051-E	The cluster is not stopped.	The cluster status is not INACTIVE. (O)

Message ID	Message	Description and Action
		Make sure that the cluster, nodes, and resource groups are in the correct states, and then try again.
KAQM06052-E	Another user is using a resource of the status display processing.	Another user is exclusively using a resource of the status display processing, or an exclusively used node has stopped. (O) Wait a while, and then retry. If a processing node stops, wait about 15 minutes or boot the stopped node. Details: See G. <i>Actions for When a Timeout Occurs due to the Inability to Secure the Resources Used for Processing</i> , and follow the procedure that is listed.
KAQM06053-E	Processing for the cluster or resource group is currently executing.	Another user might be performing a cluster or resource group operation. (O) Check the status of the cluster, node, and resource group, and then try again once the status allows execution. If an error occurs again, acquire all of the Management log files and contact maintenance personnel. See the help for a list of the Management log files.
KAQM06054-E	The specified cluster does not exist.(cluster name = <i>specified-cluster-name</i>)	A non-existent cluster was specified. (O) Specify an existing cluster, and then try again.
KAQM06055-E	The specified node does not exist.(node name = <i>specified-node-name</i>)	A node that does not exist in the cluster was specified. (O) Specify a node that exists in the cluster, and then try again.
KAQM06056-E	The specified node is not operating.	The node status is not UP. (O) Check the node status, start the node, and then try again.
KAQM06057-E	The specified node is not stopped.	The node status is not INACTIVE. (O) Make sure that the cluster, nodes, and resource groups are in the correct states, and then try again.
KAQM06058-E	A virtual IP address (service IP address) is not set for the specified resource group.	A virtual IP address is not set for the specified resource group. (O)

Message ID	Message	Description and Action
		Set one or more virtual IP addresses for the specified resource group.
KAQM06059-E	The specified resource group does not exist. (resource group name = <i>specified-resource-group-name</i>)	A non-existent resource group was specified. (O) Specify an existing resource group, and then try again.
KAQM06060-E	The specified resource group is not operating.	The resource group status is not 'Online/No error', 'Online Ready/No error', or 'Online Maintenance/No error'. (O) Make sure that the cluster, nodes, and resource groups are in the correct states, and then try again.
KAQM06061-E	The specified resource group is not stopped.	The resource group status is not 'Offline/No error' or 'Online Ready/No error'. (O) Check the resource group status, stop the resource group, and then try again.
KAQM06062-E	An attempt to start the resource group failed because the NFS service is not running.	An attempt was made to start the resource group while the NFS service was stopped, or while the cluster was not in the ACTIVE state. (O) Execute a forced stop of the resource group you attempted to start, and then remove the cause of the error. After that, start the NFS service of the node for which you attempted to start the resource group, and then try to start the resource group again. Make sure that the cluster, nodes, and resource groups are in correct states, and then try again. If an error occurs again, acquire all of the Management log files and contact maintenance personnel. See the help for a list of the Management log files.
KAQM06063-E	An attempt to exclude the resource group from being monitored failed because the resource group status does not allow monitoring.	The node status is not UP or the resource group status is not 'Online/No error'. (O) Make sure that the cluster, nodes, and resource groups are in the correct states, and then try again.

Message ID	Message	Description and Action
KAQM06064-E	An attempt to start monitoring failed because the resource group is not excluded from monitoring.	The node status is not UP or the resource group status is not 'Online Maintenance/No error'. (O) Make sure that the cluster, nodes, and resource groups are in the correct states, and then try again.
KAQM06065-E	Processing for the cluster or resource group might be currently executing, or a failover might be occurring.	Another user might be operating the cluster or resource group, or a failover might be occurring. (O) Check the status of the cluster, node, and resource group, and then try again once the statuses allow execution. If an error occurs again, acquire all of the Management log files and contact maintenance personnel. See the help for a list of the Management log files.
KAQM06066-E	The node operating the resource group is not running.	The status of the node operating the resource group is not UP. (O) Start the node operating the resource group, and then try again. If an error occurs again, acquire all of the Management log files and contact maintenance personnel. See the help for a list of the Management log files.
KAQM06067-E	The node that is the move destination of the resource group is not running.	The status of the node that is the move destination of the resource group is not UP. (O) Start the node that is the move destination of the resource group, and then try again. If an error occurs again, acquire all of the Management log files and contact maintenance personnel. See the help for a list of the Management log files.
KAQM06068-E	An attempt to start the resource group failed because the NFS service of the node that is the move destination of the resource group is not running.	An attempt was made to start the resource group while the NFS service of the node that is the move destination of the resource group was stopped, or while the cluster was not in the ACTIVE state. (O) Execute a forced stop of the resource group you attempted to move, and then remove the cause of the error. After that, start the NFS service of the

Message ID	Message	Description and Action
		node that is the move destination of the resource group, and then try to move the resource group again. Make sure that the cluster, nodes, and resource groups are in correct states, and then try again. If an error occurs again, acquire all of the Management log files and contact maintenance personnel. See the help for a list of the Management log files.
KAQM06069-E	The specified <i>item-name</i> cannot be used because it includes an invalid character. (entered value = <i>entered-value</i>)	A character that cannot be used for the name was specified. (O) Specify the name by using alphanumeric characters, forward slashes (/), periods (.), hyphens (-), underscores (_), colons (:), equal signs (=), or at marks (@).
KAQM06070-E	The specified <i>item-name</i> cannot be used because it exceeds 22 characters. (entered value = <i>entered-value</i>)	A name that exceeds the maximum number of characters was specified. (O) Specify the name by using a maximum of 22 characters.
KAQM06071-E	The specified <i>item-name</i> cannot be used because it is a reserved word. (entered value = <i>entered-value</i>)	A reserved word was specified. (O) Specify a name other than a reserved word.
KAQM06072-E	The name "0" cannot be specified for the <i>item-name</i> .	The name "0" was specified. (O) Specify a name other than "0".
KAQM06073-E	The specified <i>item-name</i> cannot be used because it begins with an underscore (_). (entered value = <i>entered-value</i>)	A name that begins with an underscore (_) was specified. (O) Specify a name that does not begin with an underscore (_).
KAQM06081-E	The specified Physical Node host name does not exist.	The specified Physical Node host name is invalid. (O) Specify a valid Physical Node host name, and then retry the operation.
KAQM06082-E	The specified Physical Node host name has already been specified.	The specified Physical Node host name has already been specified. (O) Specify a valid Physical Node host name, and then retry the operation.
KAQM06083-E	The specified node name has already been specified.	The specified node name has already been specified.

Message ID	Message	Description and Action
		(O) Specify a node name that is unique within the cluster, and then retry the operation.
KAQM06084-E	The network address of the heartbeat port and management port are the same. (IP address = <i>duplicated-IP-address</i>)	The network address of the heartbeat port and management port are the same. (O) Specify different network addresses for the heartbeat port and the management port, or change the IP address of the management port, and then retry the operation.
KAQM06085-E	The IP address of the heartbeat port and management port are the same. (IP address = <i>duplicated-IP-address</i>)	The IP address of the heartbeat port and management port are the same. (O) Specify different network addresses for the heartbeat port and the management port, or change the IP address of the management port, and then retry the operation.
KAQM06086-E	The specified model name (<i>model-name</i>) is invalid.	The specified model name is invalid. (O) Specify a valid model name, and then retry the operation.
KAQM06087-E	The specified serial number (<i>serial-number</i>) is invalid.	The specified serial number is invalid. (O) Specify a valid serial number, and then retry the operation.
KAQM06088-E	The specified volume (<i>volume</i>) is invalid.	The specified volume is invalid. (O) Specify a valid volume, and then retry the operation.
KAQM06089-E	The specified network address (<i>network-address</i>) of the heartbeat port is invalid.	The specified network address of the heartbeat port is invalid. (O) Specify a valid network address for the heartbeat port, and then retry the operation.
KAQM06090-E	The format of the management IP address on the other node is invalid. (IP address = <i>IP-address</i>)	The format of the management IP address on the other node is invalid. (O) Specify a valid IP address, and then retry the operation.
KAQM06091-E	The specified LU was not found. (model name = <i>model-</i>	The FC path status might be invalid, or the LUs in the storage system might not be properly allocated.

Message ID	Message	Description and Action
	<i>name</i> , serial number = <i>serial-number</i> , volume = <i>volume</i>)	(O) Check the FC path statuses for both nodes. If the statuses are normal, confirm with the SAN administrator that the LUs in the storage system have been properly allocated. After confirming that the LUs have been properly allocated to both nodes, retry the operation.
KAQM06092-E	The specified LU cannot be allocated as the cluster management LU because the capacity is not big enough. (model name = <i>model-name</i> , serial number = <i>serial-number</i> , volume = <i>volume</i>)	The capacity of the specified LU is insufficient for a cluster management LU. (O) Specify an LU that has sufficient capacity for a cluster management LU (68.277 GB or more), and then retry the operation.
KAQM06093-E	The specified LU is blocked. (model name = <i>model-name</i> , serial number = <i>serial-number</i> , volume = <i>volume</i>)	The specified LU is blocked. (O) Remove the LU blockage, and then retry the operation.
KAQM06094-E	A LU other than the specified LU has already been allocated as the cluster management LU. (model name = <i>model-name-of-the-LU-assigned-to-the-cluster-management-LU</i> , serial number = <i>serial-number-of-the-LU-assigned-to-the-cluster-management-LU</i> , volume = <i>volume-of-the-LU-assigned-to-the-cluster-management-LU</i>)	If an operation was executed that restores the system LU and redefines the cluster, then the specified cluster management LU is different from the one specified before the restoration. In all other cases, the cluster configuration might be in the midst of being defined on an LU different from the one that was specified. (O) If an operation was performed that restores the system LU and redefines the cluster, make sure that the specified cluster management LU is the same as the one specified before the restoration. In all other cases, wait a while, and then make sure that a cluster configuration has been defined. If a cluster configuration has not been defined, acquire all the Management log files and Cluster log files, and then inform maintenance personnel. For a list of the Management log files, see online Help.
KAQM06095-E	An attempt to communicate between nodes has failed.	An attempt to communicate between nodes has failed. (O) The specified management IP address on the other node might be invalid, or a LAN cable might have been disconnected. Make sure that the

Message ID	Message	Description and Action
		specified management IP address on the other node is correct. If the specified management IP address on the other node is correct, make sure that the LAN cables are properly connected and there are no network errors. If this does not resolve the problem, acquire all the Management log files, and then contact maintenance personnel. For a list of the Management log files, see online Help.
KAQM06096-E	A cluster configuration has been defined.	A cluster configuration has been defined. (O) No action is required.
KAQM06097-E	The network addresses of the BMC port and the management port are different.	The network addresses of the BMC port and the management port are different. (O) Change the IP address of the BMC port or the management port, and then retry the operation.
KAQM06098-E	The IP address of the BMC port and management port are the same. (IP address = <i>duplicated-IP-address</i>)	The IP address of the BMC port and management port are the same. (O) Change the IP address of the BMC port or the management port, and then retry the operation.
KAQM06099-E	The network address of the BMC port and heartbeat port are the same. (IP address = <i>duplicated-IP-address</i>)	The network address of the BMC port and heartbeat port are the same. (O) Specify different network addresses for the BMC port and the heartbeat port, or change the IP address of the BMC port, and then retry the operation.
KAQM06100-E	The IP address of the BMC port and heartbeat port are the same. (IP address = <i>duplicated-IP-address</i>)	The IP address of the BMC port and heartbeat port are the same. (O) Specify different network addresses for the BMC port and the heartbeat port, or change the IP address of the BMC port, and then retry the operation.
KAQM06101-E	The network addresses of the management ports on both nodes are different.	The network addresses of the management ports on both nodes are different. (O) Change the IP addresses of the management ports so that the network

Message ID	Message	Description and Action
		address between the two nodes is the same, and then retry the operation.
KAQM06102-E	A cluster configuration has been defined.	The cluster configuration has already been defined, or the specified management IP address on the other node is invalid. (O) Check the status of the cluster configuration. If a cluster has not been defined, check the specified management IP address on the other node, and then retry the operation.
KAQM06103-E	The IP addresses of the BMC port on both nodes are the same. (IP address = <i>duplicated-IP-address</i>)	The IP addresses of the BMC port on both nodes are the same. (O) Change the IP addresses of the BMC port so that the IP address between the two nodes is different, and then retry the operation.
KAQM06104-E	The network addresses of the BMC ports on both nodes are different.	The network addresses of the BMC ports on both nodes are different. (O) Change the IP addresses of the BMC ports so that the network address between the two nodes is the same, and then retry the operation.
KAQM06105-W	The license <i>license-name</i> on one node in the cluster does not match the license on the other node.	The license on one node in the cluster does not match the license on the other node. (O) Check the licenses on both nodes, and make sure that they match.
KAQM06106-E	An HA Cluster license has not been set.	An HA Cluster license has not been set. (O) Set an HA Cluster license on both nodes in the cluster, and then retry the operation.
KAQM06107-E	An attempt to allocate the cluster management LU has failed. (model name = <i>model-name</i> , serial number = <i>serial-number</i> , volume = <i>volume</i>)	An error might have occurred on the disk where the LU is stored, or there might be a problem in internal processing. (O) Check the status of the specified LU, format the LU if it is in an abnormal status, and then retry the operation. If this error occurs again, acquire all of the Management log files and contact maintenance personnel. For a list of

Message ID	Message	Description and Action
		the Management log files, see online Help.
KAQM06108-W	The cluster could be started, but whether licenses are consistent could not be confirmed.	The communication between nodes might have failed because a LAN cable was disconnected, one of the nodes in the cluster was heavily loaded, or the other node in the cluster was not running. (O) Make sure that the LAN cables are connected, the load on the nodes in the cluster has returned to a normal state, and the other node in the cluster is running. Connect to the other node in the cluster, and then make sure that the licenses are consistent between the nodes.
KAQM06109-Q	Executing this command changes the DISABLE status of the cluster. (The cluster is in the DISABLE status when the nodes cannot communicate with each other.) The command then forcibly fails over the resource group running on the other node. If the power to the other node is on, then the service might not be able to be restarted. Are you sure you want to continue? (y/n)	This confirmation message is output before the DISABLE status of a cluster is changed. (O) Enter y or n.
KAQM06110-E	The processing to change the DISABLE status of the cluster cannot be executed because the cluster is not in the DISABLE status.	The cluster is not in the DISABLE status. (O) Check the status of the cluster. If the cluster is in the DISABLE status, retry the operation. If the error occurs again, acquire all the Management and cluster log files, and then contact maintenance personnel. If the cluster is not in the DISABLE status, check the system messages. If any KAQM06nnn or KAQG7nnnn messages have been output, follow the instructions in the messages. If no system messages have been output, acquire all the Management and cluster log files, and then contact maintenance personnel. For a list of the Management and cluster log files, see online Help.
KAQM06112-E	Definition of a cluster configuration was canceled	There might be a problem with the heartbeat port LAN cable. (O)

Message ID	Message	Description and Action
	because the heartbeat port timed out in an attempt to link up.	Replace the heartbeat port LAN cable, and then retry the operation. If this error occurs again, acquire all the log data, and then contact maintenance personnel.
KAQM06116-E	An error occurred in the cluster management LU (model name = <i>model-name</i> , serial number = <i>serial-number</i> , volume = <i>volume</i>) or a system file, or access to the cluster management LU is being suppressed because a resource group was forcibly failed over.	An error occurred in the cluster management LU or a system file, the cluster management LU is blocked, or access to the cluster management LU is being suppressed because a resource group was forcibly failed over. (O) Inform maintenance personnel.
KAQM06118-W	The node could be started, but whether licenses are consistent could not be confirmed.	The communication between nodes might have failed because a LAN cable was disconnected, one of the nodes in the cluster was heavily loaded, or the other node in the cluster was not running. (O) Make sure that the LAN cables are connected, the load on the nodes in the cluster has returned to a normal state, and the other node in the cluster is running. Connect to the other node in the cluster, and then make sure that the licenses are consistent between the nodes.
KAQM06119-E	An attempt to modify the host name has failed.	There might be a problem in internal processing. (O) Acquire all the log files, and then inform maintenance personnel.
KAQM06120-E	The resource group is not running.	The resource group is not in the Online/No error status or the Partial Online status. (O) Confirm that the resource group status is valid, and then retry the operation.
KAQM06121-E	The resource group is not stopped.	The resource group is not in the Offline/No error status. (O) Check the resource group status, stop the resource group, and then retry the operation.
KAQM06122-E	An attempt to start the resource group has failed.	There might be a problem in internal processing. (O)

Message ID	Message	Description and Action
		Acquire all the log files, and then contact maintenance personnel.
KAQM06123-E	An attempt to stop the resource group has failed.	There might be a problem in internal processing. (O) Acquire all the log files, and then contact maintenance personnel.
KAQM06124-E	An internal error occurred. Processing might be temporarily disabled.	An attempt to create a process has failed. There might not be enough memory or assignable process IDs. (O) Wait a while, and then retry the operation. If the problem persists, acquire all the log files, and then contact maintenance personnel.
KAQM06125-E	An attempt to start the resource group has failed.	An attempt to start the resource group has failed. (O) Check the system messages to verify whether an error occurred. If a KAQM35nnn message was output to the system messages, take appropriate action. If no system messages were output, acquire all the log files, and then contact maintenance personnel.
KAQM06126-E	An attempt to stop the resource group has failed.	An attempt to stop the resource group has failed. (O) Check the system messages to verify whether an error occurred. If a KAQM35nnn message was output to the system messages, take appropriate action. If no system messages were output, acquire all the log files, and then contact maintenance personnel.
KAQM06127-E	The starting of the resource group timed out.	The starting of the resource group timed out. (O) Forcibly stop the resource group, and then retry the operation. If the problem persists, acquire all the log files, and then contact maintenance personnel.
KAQM06128-E	The stopping of the resource group timed out.	The stopping of the resource group timed out. (O) Forcibly stop the resource group.

Message ID	Message	Description and Action
KAQM06129-E	An attempt to stop the resource group has failed.	There might be a problem in internal processing. (O) Acquire all the log files, and then contact maintenance personnel.
KAQM06130-E	The specified node (the other node) is in a single-node configuration.	Cluster configuration definitions cannot be executed for single-node configurations. (O) Check the management IP address of the other node, and then specify a valid management IP address.
KAQM06131-E	An attempt to start the resource group failed because the NFS service is not running.	An attempt was made to start the resource group while the NFS service was stopped. (O) Forcibly stop the resource group, and then remove the cause of the error. After that, start the NFS service, check the status of the resource group, and if the resource group is in a status that will allow the operation to be performed, retry the operation. If the problem persists, acquire all the log files, and then contact maintenance personnel.
KAQM06132-E	The management port has not been set.	The command cannot be executed before the management port is set. (O) Set the management port before starting the system.
KAQM06133-Q	Performing this operation will stop the services on both nodes. Are you sure you want to stop the cluster? (y/n)	This confirmation message is output before the cluster is stopped. (O) Enter y or n.
KAQM06134-Q	Performing this operation might stop the services on the node. Are you sure you want to stop the node? (y/n)	This confirmation message is output before the node is stopped. (O) Enter y or n.
KAQM06135-Q	Performing this operation will stop the services. Are you sure you want to stop the resource group? (y/n)	This confirmation message is output before the resource group is stopped. (O) Enter y or n.
KAQM06136-Q	Performing this operation will temporarily stop the services. Are you sure you want to	This confirmation message is output before the resource group is moved. (O) Enter y or n.

Message ID	Message	Description and Action
	change the execution node of the resource group? (y/n)	
KAQM06137-E	Startup of the node timed out.	Some resources to be used for processing are locked because another user is using them. (O) If the node is not already starting, start it. Details: <i>See G. Actions for When a Timeout Occurs due to the Inability to Secure the Resources Used for Processing,</i> and follow the procedure that is listed.
KAQM06138-E	Startup of the resource group timed out.	Some resources to be used for processing are locked because another user is using them. (O) If the resource group is not already starting, start it. Details: <i>See G. Actions for When a Timeout Occurs due to the Inability to Secure the Resources Used for Processing,</i> and follow the procedure that is listed.
KAQM06139-E	The resource group move timed out.	Some resources to be used for processing are locked because another user is using them. (O) If the resource group has not already been moved, move it. Details: <i>See G. Actions for When a Timeout Occurs due to the Inability to Secure the Resources Used for Processing,</i> and follow the procedure that is listed.
KAQM06140-E	The defining of the cluster configuration was canceled because communication with the BMC port failed.	There might be a problem with the BMC LAN cable, or an error might have occurred in the BMC. If pm1 is connected to the BMC port, then there might be a problem with the pm1 LAN cable, or an error might have occurred in pm1. (O) Replace the BMC or pm1 LAN cable, and then retry the operation. If this error occurs again or if there is a problem with the BMC, acquire all the log data, and then contact maintenance personnel.

Message ID	Message	Description and Action
KAQM06141-E	The <code>bmcctl</code> command was not executed after the network address of the management port was changed.	The <code>bmcctl</code> command was not executed after the network address of the management port was changed. (O) Execute the <code>bmcctl</code> command on both nodes, and then retry the operation.
KAQM06142-E	The node cannot be started because the OS on the other node in the cluster is not running properly.	The OS on the other node in the cluster is not running properly. The OS might currently be starting or stopping. (O) Verify that the OS on the other node in the cluster is running properly. Verify that "BOOT COMPLETE" is displayed for the <code>peerstatus</code> command, and then retry the operation.
KAQM06144-E	An attempt to update resource information failed.	An attempt to update resource information failed. (O) Perform the failover or failback operation. If the error happens again, an OS version downgrade is necessary. Contact your technical support group.
KAQM06145-W	The resource information update is not complete.	The resource information update is not complete. (O) Perform the failover or failback operation. If the error happens again, an OS version downgrade is necessary. Contact your technical support group.

KAQM07 messages

This section explains messages that have a message ID beginning with KAQM07, and the actions to be taken if such messages appear.

Table 5-5 KAQM07 messages

Message ID	Message	Description and Action
KAQM07001-E	An error exists in the value entered for the group name. (entered data= <i>group-name</i>)	A character that cannot be specified in a group name was specified, or an error exists in the number of entered characters. (O) Enter a suitable value according to the help.

Message ID	Message	Description and Action
KAQM07002-E	An error exists in the value entered for the GID. (entered data= <i>GID</i>)	A character other than a numerical value was specified or the range that can be specified was exceeded. (O) Enter a suitable value according to the help.
KAQM07003-E	A non-registered user is included in the specified member users. (entered data= <i>user</i>)	The specified user might not be registered or might have been deleted by another system administrator. (O) Retry the operation. When using a command, make sure to specify a registered user. If the error occurs again, acquire all the Management log files, and then contact maintenance personnel. See Help for a list of the Management log files.
KAQM07004-E	An error exists in the value entered for the user name. (entered data= <i>user-name</i>)	A character that cannot be specified in a user name was specified, or an error exists in the number of entered characters. (O) Enter a suitable value according to the help.
KAQM07005-E	An error exists in the value entered for the UID. (entered data= <i>UID</i>)	A character other than a numerical value was specified or the range that can be specified was exceeded. (O) Enter a suitable value according to the help.
KAQM07006-E	The specified group is not registered. (entered data = <i>group</i>)	The specified group might not be registered or might have been deleted by another system administrator. (O) Retry the operation. When using a command, make sure to specify a registered group. If the error occurs again, acquire all the Management log files, and then contact maintenance personnel. See Help for a list of the Management log files.
KAQM07007-E	An unregistered group was specified as a member group. (entered data = <i>group</i>)	The specified group might not be registered or might have been deleted by another system administrator. (O) Retry the operation. When using a command, make sure to specify a registered group. If the error occurs

Message ID	Message	Description and Action
		again, acquire all the Management log files, and then contact maintenance personnel. See Help for a list of the Management log files.
KAQM07008-E	An error exists in the value entered for the password.	A character sequence that cannot be specified for a password was specified, or an error exists in the number of entered characters. (O) Enter a suitable value according to the help.
KAQM07009-E	The password and re-enter password do not match.	The re-enter password did not match the password. (O) Enter the password again.
KAQM07010-E	An error exists in the entered value specified for the comment. (entered data= <i>comment</i>)	A character sequence that cannot be specified for a comment was specified, or an error exists in the number of entered characters. (O) Enter a suitable value according to the help.
KAQM07011-E	The specified group is already registered. (entered data= <i>group-name</i>)	An already registered group name cannot be specified. (O) Specify a group name that is not registered.
KAQM07012-E	The specified GID is already registered. (entered data= <i>GID</i>)	An already registered GID cannot be specified. (O) Specify the GID that is not registered.
KAQM07013-E	The specified user is already registered. (entered data= <i>user-name</i>)	An already registered user name cannot be specified. (O) Specify a user name that is not registered.
KAQM07014-E	The specified UID is already registered. (entered data= <i>UID</i>)	An already registered UID cannot be specified. (O) Specify a UID that is not registered.
KAQM07015-E	The specified group does not exist or cannot be specified.	The specified group might not be registered, might have been deleted by another system administrator, might not be a local group, or might be a system-reserved group. (O)

Message ID	Message	Description and Action
		Retry the operation. If you are using a command, check [List of Groups] to make sure that the group name is correct. If the error occurs again, acquire all the Management log files, and then contact maintenance personnel. See Help for a list of the Management log files.
KAQM07016-E	The specified user does not exist or cannot be specified.	The specified user might not be registered, might have been deleted by another system administrator, might not be a local user, or might be a system-reserved user. (O) Retry the operation. If you are using a command, check [List of Users] to make sure that the user name is correct. If the error occurs again, acquire all the Management log files, and then contact maintenance personnel. See Help for a list of the Management log files.
KAQM07017-E	The user authentication failed.	An invalid user name or invalid password was specified. (O) Enter the correct user name or password.
KAQM07018-E	The maximum of the number of users that can be registered was exceeded.	The number of registered users has reached the maximum of the number of users that can be registered. (O) If you want to register a new user, delete a user.
KAQM07019-E	An internal error occurred.	A conflict with another system administrator's operation or an internal error may have occurred. (O) Retry. Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM07020-E	The group registration processing failed.	A conflict with another system administrator's operation or an internal error may have occurred. (O) Retry execution. If the error occurs again, acquire all the Management log files, and inform maintenance

Message ID	Message	Description and Action
		personnel. See the help for a list of the Management log files.
KAQM07021-E	The group edit processing failed.	A conflict with another system administrator's operation or an internal error may have occurred. (O) Retry execution. If the error occurs again, acquire all the Management log files, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM07022-E	The group deletion processing failed.	A conflict with another system administrator's operation or an internal error may have occurred. (O) Retry execution. If the error occurs again, acquire all the Management log files, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM07023-E	The user registration processing failed.	A conflict with another system administrator's operation or system error may have occurred. (O) Retry execution. Acquire all the Management log files if the error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM07024-E	The user editing failed.	A conflict with another system administrator's operation or system error may have occurred. (O) Retry execution. If the error occurs again, acquire all the Management log files, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM07025-E	The user deletion processing failed.	A conflict with another system administrator's operation or system error may have occurred. (O) Retry execution. If the error occurs again, acquire all the Management log files, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM07026-E	The password registration failed.	A conflict with another system administrator's operation or system error may have occurred.

Message ID	Message	Description and Action
		(O) Retry execution. If the error occurs again, acquire all the Management log files, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM07027-E	The changing of the password failed.	A conflict with another system administrator's operation or system error may have occurred. (O) Retry execution. If the error occurs again, acquire all the Management log files, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM07028-E	The creation of the CIFS account failed.	A conflict with another system administrator's operation or system error may have occurred. (O) Retry execution. If the error occurs again, acquire all the Management log files, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM07029-E	The updating of the CIFS account failed.	A conflict with another system administrator's operation or system error may have occurred. (O) Retry execution. If the error occurs again, acquire all the Management log files, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM07030-E	The deletion of the CIFS account failed.	A conflict with another system administrator's operation or system error may have occurred. (O) Retry execution. If the error occurs again, acquire all the Management log files, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM07031-E	The system administrator information could not be updated.	A conflict with another account administrator's or system administrator's operation might have occurred, or a system error might have occurred. (O) Retry. Acquire all the Management log files if the error occurs again, and

Message ID	Message	Description and Action
		inform maintenance personnel. See the help for a list of the Management log files.
KAQM07033-E	The specified group is set up as a user's primary group.	A group specified to be a user's primary group cannot be deleted. (O) Delete the users who use the group you want to delete as a primary group, and then retry.
KAQM07034-E	The specified user cannot be deleted. (entered data= <i>system-administrator-name</i>)	The number of the system administrators registered is one, so the user cannot be deleted. (O) Register another system administrator, and then delete the specified system administrator.
KAQM07036-E	During checking of the file used for batch registration or deletion, an error was detected in the file.	An error exists in the contents of the specified file. (O) Correct the contents of the CSV file according to the contents of the error in the execution result file, and then retry the operation.
KAQM07037-I	No error was found while the batch configuration file was being checked.	All the contents of the specified file are normal. (O) No action is required.
KAQM07038-I	Batch operation (registration) ended normally.	Batch operation (registration or deletion) of users was completed normally. (O) No action is required.
KAQM07039-E	An attempt to upload a file failed.	A system error may have occurred. (O) Retry. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM07040-E	An attempt to download a file failed.	A system error may have occurred. (O) Retry. Acquire all the Management log files if the error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.

Message ID	Message	Description and Action
KAQM07048-E	A file operation failed.	A problem may exist in the processing of an OS disk or a system file. (O) Check the settings and check for problems in the OS disk. Acquire all the Management log files if there is no problem, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM07052-E	An invalid file was specified.	A file with a file format that cannot be used for batch registration or deletion was specified. (O) Specify a CSV file that can be used for batch registration or deletion.
KAQM07053-E	No group is registered.	You must register at least one group for registration of a user. (O) Register the primary group to which the user belongs.
KAQM07054-E	An attempt to acquire user information failed.	The user was deleted or a system error may have occurred. (O) Click [Close] to close the window, and then contact the system administrator. If you want to continue the operation, after the system administrator performs the necessary tasks, log in again. Inform the system administrator of the following information: Message ID: KAQM07054-E, Action: Check whether the user is registered in File Services Manager. If not registered, register the deleted user again. If registered, acquire all the Management log files, and then contact maintenance personnel. See the Help for a list of the Management log files.
KAQM07056-E	Information about a user who is currently logged in cannot be edited.	The currently logged-in user is not registered in File Services Manager, so editing cannot be executed. (O) When user information is not managed with File Services Manager, contact the administrator of the server used to manage the user information.
KAQM07059-E	An invalid file was specified.	The specified file does not exist or the file is empty. (O)

Message ID	Message	Description and Action
		Specify a CSV file that was created for batch registration or deletion.
KAQM07060-E	The entered administrator name is incorrect. (entered data= <i>administrator-name</i>)	The entered administrator name contains some invalid characters, or the number of entered characters is invalid. (O) Enter an appropriate value according to the help.
KAQM07061-E	The system administrator information could not be acquired.	The specified system administrator might be deleted, a conflict with another account administrator's or system administrator's operation might have occurred, or a system error might have occurred. (O) Check whether the specified administrator exists. If no administrator exists, this operation cannot be performed. If the specified administrator exists, retry execution. If this error occurs again, acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM07062-E	The account administrator information could not be acquired.	A conflict with another account administrator's operation might have occurred, or a system error might have occurred. (O) Retry execution. If this error occurs again, acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM07063-E	The password could not be changed.	The specified system administrator might be deleted, a conflict with another account administrator's or system administrator's operation might have occurred, or a system error might have occurred. (O) Check whether the specified administrator exists. If no administrator exists, this operation cannot be performed. If the specified administrator exists, retry execution. If this error occurs again, acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.

Message ID	Message	Description and Action
KAQM07064-E	The password could not be changed.	A conflict with another account administrator's operation might have occurred, or a system error might have occurred. (O) Retry execution. If the error occurs again, acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM07065-E	The account administrator information could not be updated.	A conflict with another account administrator's operation might have occurred, or a system error might have occurred. (O) Retry execution. If the error occurs again, acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM07066-E	The processing that registers a group to the CIFS ACL environment has failed.	A system error may have occurred. (O) Retry execution. Acquire all the Management log files if the error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM07067-E	The processing that deletes a group from the CIFS ACL environment has failed.	A system error may have occurred. (O) Retry execution. Acquire all the Management log files if the error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM07068-E	The processing that acquires the information on whether the group is registered to the CIFS ACL environment has failed.	A system error may have occurred. (O) Retry execution. Acquire all the Management log files if the error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM07069-E	The specified user could not be registered.	The specified user name is already specified for a group name registered in the CIFS (ACL) environment. (O) Enter another user name.
KAQM07070-E	The specified group could not be registered.	The specified group name is already specified for a user name registered in the CIFS environment.

Message ID	Message	Description and Action
		(O) Enter another group name.
KAQM07071-E	The execution result file could not be created.	A file with the same name as the specified file already exists. (O) Specify another file name, and then retry the operation.
KAQM07072-E	An error occurred during batch registration or deletion.	An error occurred during batch registration or deletion. (O) Correct the contents of the CSV file according to the contents of the error in the execution result file, and then retry the operation.
KAQM07073-I	Checking data ...(<i>progress</i>)	None. (O) None.
KAQM07074-I	Reflecting data ... (<i>progress</i>)	None. (O) None.
KAQM07075-I	Batch processing will now start.	None. (O) None.
KAQM07076-Q	Do you want to delete <i>user-or-group</i> ? (y/n)	None. (O) None.
KAQM07077-Q	Do you want to perform a batch deletion? (y/n)	None. (O) None.
KAQM07078-I	Batch processing finished.	None. (O) None.
KAQM07079-E	An internal error occurred.	A conflict with another system administrator's operation or an internal error might have occurred, or the home directory might not have enough space. (O) Delete any unnecessary files in the home directory (<i>/home/nasroot/</i>) of the SSH account, and then retry the operation. If the error occurs again, acquire all the Management log files,

Message ID	Message	Description and Action
		and then contact maintenance personnel. For a list of the Management log files, see Help. Note: Delete unnecessary files by using the <code>rmfile</code> command.
KAQM07080-E	An attempt to change the password failed.	A conflict with another operator's operation or a system error might have occurred. (O) Retry the operation. If this error occurs again, inform the system administrator of the following information: Message ID: KAQM07080-E, Action: Acquire all the Management log files, and then contact maintenance personnel. See the Help for a list of the Management log files.
KAQM07081-E	Editing of user information failed.	A system administrator might have deleted the user, or a system error might have occurred. (O) Retry the operation. If this error occurs again, inform the system administrator of the following information: Message ID: KAQM07081-E, Action: Acquire all the Management log files, and then contact maintenance personnel. See the Help for a list of the Management log files.
KAQM07082-E	An internal error occurred.	A conflict with another operator or an internal error might have occurred. (O) Retry the operation. If this error occurs again, inform the system administrator of the following information: Message ID: KAQM07082-E, Action: Acquire all the Management log files, and then contact maintenance personnel. See the Help for a list of the Management log files.
KAQM07083-E	Editing of user information failed.	A conflict with another operator or an internal error might have occurred. (O) Retry the operation. If this error occurs again, inform the system administrator of the following information: Message ID: KAQM07083-E, Action: Acquire all the Management log files, and then contact maintenance personnel. See

Message ID	Message	Description and Action
		the Help for a list of the Management log files.
KAQM07084-E	The updating of the CIFS account failed.	A conflict with another operator or an internal error might have occurred. (O) Retry the operation. If this error occurs again, inform the system administrator of the following information: Message ID: KAQM07084-E, Action: Acquire all the Management log files, and then contact maintenance personnel. See the Help for a list of the Management log files.
KAQM07087-E	The specified password includes an unusable character.	The specified password includes an unusable character. (O) Specify a correct password, and then retry the operation.
KAQM07088-E	The length of specified password is outside the valid range. (minimum length = <i>minimum-length</i> , maximum length = <i>maximum-length</i>)	The length of specified password is outside the valid range. (O) Specify a password that has a valid length, and then retry the operation.

KAQM08 messages

This section explains messages that have a message ID beginning with KAQM08, and the actions to be taken if such messages appear.

Table 5-6 KAQM08 messages

Message ID	Message	Description and Action
KAQM08007-E	The value specified for the name of file share is invalid. (entered data= <i>share-name</i>)	A value with an incorrect character or that exceeded the maximum number of characters was specified. (O) Enter a suitable value according to the help.
KAQM08008-E	An error exists in the value specified for the shared directory. (entered data= <i>directory-name</i>)	A value with an incorrect character or that exceeded the maximum number of characters was specified, or an error is in the format of the specified character sequence. (O) Enter a suitable value according to the help.

Message ID	Message	Description and Action
KAQM08021-E	The specified directory does not exist. (entered data= <i>directory-name</i>)	The entered shared directory does not exist. (O) Use the <code>dirlist</code> command to check the directory name, and then retry the operation.
KAQM08022-E	The specified directory name has already been specified as a file share.	The specified shared directory is already being used by another CIFS/NFS file share. (O) In List of File Shares, check that the directory has not been made public, and then retry the operation.
KAQM08023-E	The specified name is already used as the name of a file share.	The specified name of the file share is already being used by another file share. (O) Make sure that the file share name you are going to specify does not exist in List of File Shares.
KAQM08024-E	The specified file share does not exist.	Another system administrator might have deleted the file share. (O) In List of File Shares, check that the file share name exists, and then specify the correct file share name and retry the operation. If the error occurs again, acquire all the Management log files, and then contact maintenance personnel. See Help for a list of the Management log files.
KAQM08025-E	The specified network address of the client to be made public was not found. (entered value= <i>client</i>)	The IP address of the client specified for the public destination host/network was undetectable. (O) Specify an existing host or network.
KAQM08026-E	An attempt to acquire information about file shares has failed.	A conflict with another system administrator's operation or an internal error may have occurred. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM08029-E	An internal error occurred.	An internal error may have occurred. (O)

Message ID	Message	Description and Action
		<p>Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.</p> <p>Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.</p>
KAQM08032-E	The CIFS file share creation failed.	<p>A conflict with another system administrator's operation or an internal error may have occurred.</p> <p>(O)</p> <p>Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.</p>
KAQM08033-E	The CIFS file share editing failed.	<p>A conflict with another system administrator's operation or an internal error may have occurred.</p> <p>(O)</p> <p>Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.</p>
KAQM08034-E	The CIFS file share deletion failed.	<p>A conflict with another system administrator's operation or an internal error may have occurred.</p> <p>(O)</p> <p>Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.</p>
KAQM08035-E	The NFS file share creation failed.	<p>An error exists in the entered data or an unexpected error occurred during creation of an NFS share.</p> <p>(O)</p> <p>Revise the entered values. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.</p>

Message ID	Message	Description and Action
KAQM08036-E	The NFS file share editing failed.	An error exists in the entered data or an unexpected error occurred while an NFS share was being edited. (O) Revise the entered values. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM08037-E	The NFS file share deletion failed.	A conflict with another system administrator's operation or an internal error may have occurred. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM08039-E	The data restoration processing failed.	An internal error may have occurred. (O) Use a window operation to return to the state before the setup. If you cannot return to the state before the setup because of an error, acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files. Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.
KAQM08041-E	A value exceeding the maximum size that can be specified for a public destination host/network was specified.	A value exceeding the maximum size that can be specified for a public destination host/network was specified. (O) Enter a suitable value according to the help.
KAQM08043-E	The maximum number of users/groups that can be specified for the Write allowed users/groups or Write disallowed users/groups has been exceeded.	The maximum number of users/groups that can be specified for the Write allowed users/groups or Write disallowed users/groups has been exceeded. (O)

Message ID	Message	Description and Action
		Enter a suitable value according to the help.
KAQM08045-E	The maximum number of creatable CIFS file shares has been reached.	The maximum number of creatable CIFS file shares has been reached. (O) Delete an unnecessary CIFS file share, and then create a new CIFS file share.
KAQM08046-E	The number of created NFS file shares has reached the limit.	The number of created NFS file shares has reached the limit. (O) Delete any unnecessary NFS file shares, and then create a new NFS file share.
KAQM08047-E	Processing of the failover function or an attempt to access a system file has failed.	Processing of the failover function or an attempt to access a system file has failed. (O) Acquire all the Management log files, and Cluster log files, and contact maintenance personnel. See the help for a list of the Management log files and Cluster log files.
KAQM08048-E	An attempt to acquire resource group or system file information failed.	An attempt to acquire resource group or system file information failed. (O) Acquire all the Management log files, and Cluster log files, and contact maintenance personnel. See the help for a list of the Management log files and Cluster log files.
KAQM08049-E	The file system specified for the shared directory is not mounted. This might be due to the resource group being in the Offline state, a failover occurring, or the virtual server not running normally. (entered value = <i>shared-directory-name</i>)	The file system specified for the shared directory is not mounted. This might be due to the resource group being in the Offline state, a failover occurring, or the virtual server not running normally. (O) If the resource group is in the Offline state, a failover is occurring, or a virtual server is not running normally, remove the cause of the problem and then try again. If the file system is not mounted, mount the file system, and then try again.
KAQM08050-E	A relative path or symbolic link is contained in the value specified for the shared directory. (entered data = <i>shared-directory-name</i>)	A relative path or symbolic link is contained in the value specified for the shared directory. (O)

Message ID	Message	Description and Action
		Specify an absolute pathname. Moreover, for a shared directory, specify a path that does not include a symbolic link.
KAQM08051-E	The same host is specified more than once for the public destination host or network.	The same host cannot be specified more than once for the public destination host or network. (O) Correct the value of the duplicated host specified for the public destination host or network, and then retry execution.
KAQM08052-E	A directory cannot be created because a parent directory does not exist. (specified value= <i>directory-name</i>)	A directory cannot be created because a parent directory does not exist. (O) Make sure that the parent directory exists, and then re-execute the operation.
KAQM08053-E	The specified directory does not exist. (specified value= <i>directory-name</i>)	The specified directory does not exist. (O) Specify an existing directory.
KAQM08055-E	The name of a directory that already exists was specified. (entered data= <i>directory-name</i>)	The name of a directory that already exists was specified. (O) Specify the name of the new directory to be created.
KAQM08056-E	The file system corresponding to the specified directory is not mounted, or a failover might be occurring. (specified value = <i>directory-name</i>)	The file system corresponding to the specified directory is not mounted, or a failover might be occurring. (O) If a failover is occurring, remove the problem and then retry. If the file system is not mounted, mount the file system, and then retry.
KAQM08057-E	The specified directory contains a relative path or symbolic link. (specified value= <i>directory-name</i>)	The specified directory contains a relative path or symbolic link. (O) Specify an absolute pathname. Moreover, for a shared directory, specify a path that does not include a symbolic link.
KAQM08058-E	The directory operation cannot be performed because the file system corresponding to the specified directory does not exist. (specified = <i>directory-name</i>)	The directory operation cannot be performed because the file system corresponding to the specified directory does not exist. (O)

Message ID	Message	Description and Action
		In List of File Systems, check that the file system name exists, and then specify the correct file system name.
KAQM08059-E	The directory operation cannot be performed because the file system corresponding to the specified directory is defined by the other node in the cluster. (specified value= <i>directory-name</i>)	The directory operation cannot be performed because the file system corresponding to the specified directory is defined by the other node in the cluster. (O) On the other node of the cluster, perform the operation for the specified directory.
KAQM08060-E	The directory operation cannot be performed because the file system corresponding to the specified directory is mounted but writing is not permitted. (specified value= <i>directory-name</i>)	The directory operation cannot be performed because the file system corresponding to the specified directory is mounted but writing is not permitted. (O) Mount the file system with write permissions, and then retry the operation. If the file system is mounted without write permissions, this operation cannot be performed.
KAQM08061-E	The specified directory operation failed because, for example, an import from another file server failed or the file system is blocked. (specified value = <i>directory-name</i>)	The specified directory operation failed because, for example, an import from another file server failed or the file system is blocked. (O) Check the HSM Core log (<i>hsmarc.log</i>), and if an error message was output, use it to help resolve the problem. Also, check the status of the file system from the list of file systems, and if an error has occurred, acquire all the log data, and then contact maintenance personnel. Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.
KAQM08063-E	The specified file share was not found. This might be due to the resource group being in the Offline state, a failover to another node in the cluster occurring, a virtual server not running normally, or an	The specified file share was not found. This might be due to the resource group being in the Offline state, a failover to another node in the cluster occurring, a virtual server not running normally, or an incorrectly specified resource group name.

Message ID	Message	Description and Action
	incorrectly specified resource group name.	(O) Check the file system name corresponding to the specified file share. In the case of a CIFS file share, check the file share name. To make sure that the specification is correct, check the statuses of the cluster, nodes, resource groups, and virtual server.
KAQM08064-E	A file sharing operation failed because the file system corresponding to the specified shared directory is being blocked.	A file sharing operation failed because the file system corresponding to the specified directory is blocked. (O) Acquire all the Management log files, and Cluster log files, and contact maintenance personnel. See the help for a list of the Management log files and Cluster log files. Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.
KAQM08067-E	The operation failed because the file system corresponding to the specified shared directory does not exist.	The operation failed because the file system corresponding to the specified shared directory does not exist. (O) In List of File Systems, check that the file system name exists, and then specify the correct file system name.
KAQM08068-E	An operation failed because the file system corresponding to the specified file share does not exist. The file system corresponding to the specified file share may have been deleted by another system administrator.	An operation failed because the file system corresponding to the specified file share does not exist. The file system corresponding to the specified file share may have been deleted by another system administrator. (O) If the specified file share exists, delete it. If, however, you want to recreate the same file share, before you delete it, save the settings for that file share (for example, refer to List of File Shares).
KAQM08069-E	An unspecifiable name was specified for a CIFS share name. (entered value = <i>share-name</i>)	An unspecifiable name was specified for a CIFS share name. (O)

Message ID	Message	Description and Action
		Refer to the online help and specify a correct CIFS share name.
KAQM08071-E	A value exceeding the maximum size that can be set for the host/network of the <code>-s</code> option was specified.	A value exceeding the maximum size that can be set for the host/network of the <code>-s</code> option was specified. (O) Enter a valid value according to the help.
KAQM08073-E	A file share cannot be created for the specified directory.	A file share cannot be created for the specified directory, because the directory is being used by the file snapshot functionality. (O) Specify another directory, and then try again.
KAQM08074-E	This operation cannot be executed for the specified NFS file share.	This operation cannot be executed for the specified NFS file share, because the NFS file share is being used by the file snapshot functionality. (O) Make sure that the specified directory is correct, and then try again.
KAQM08075-E	The specified file share cannot be deleted.	The specified file share cannot be deleted because there is a differential-data snapshot which is visible within the share. (O) Unmount the differential-data snapshot, and then delete this file share.
KAQM08076-W	The specified settings, for the times when the CIFS access log is to be collected, will have no effect because the CIFS service settings specify that the CIFS access log is not to be used.	Even though the settings, for the times when the CIFS access log is to be collected, were specified in the CIFS file share definitions, the CIFS access log will not be collected because the CIFS service settings specify that the CIFS access log is not to be used. (O) To use the CIFS access log, in the CIFS service settings specify that the CIFS access log is to be used.
KAQM08077-E	This operation cannot be performed because the resource group is not in the Online/No error state. (resource group name = <i>resource-group-name</i>)	This operation cannot be performed because the resource group, to which the file system corresponding to the specified directory belongs, is not in the Online/No error state. (O)

Message ID	Message	Description and Action
		Make sure that the cluster, nodes, and resource groups are in the correct states, and then try again.
KAQM08078-E	This operation cannot be performed because the resource group, to which the file system corresponding to the specified directory belongs, is active on another node in the cluster. (resource group name = <i>resource-group-name</i>)	This operation can be performed on the node on which the resource group, to which the file system corresponding to the specified directory belongs, is active. (O) Perform the operation on the other node on which the resource group is active, or move the resource group, and then retry the operation.
KAQM08079-E	The directory cannot be deleted because a file or subdirectory exists in it. (directory = <i>directory-name</i>)	A file or subdirectory exists in the directory that you tried to delete. (O) Delete all files or subdirectories from the directory, and then retry the operation.
KAQM08080-E	The directory cannot be deleted because an NFS share was created in it. (directory = <i>directory-name</i>)	An NFS share was created in the directory that you tried to delete. (O) Delete the NFS share from the directory, and then retry the operation.
KAQM08081-E	The directory cannot be deleted because a CIFS share was created in it. (directory = <i>directory-name</i>)	A CIFS share was created in the directory that you tried to delete. (O) Delete the CIFS share from the directory, and then retry the operation.
KAQM08107-E	An attempt to acquire the ACL has failed.	A conflict with another system administrator's operation or an internal error may have occurred. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM08108-E	Directory operations cannot be performed because the file system corresponding to the specified directory is not mounted. (specified value = <i>directory-name</i>)	The file system corresponding to the specified directory is not mounted. This might be due to the resource group being in the Offline state, a failover occurring, or a virtual server not operating normally. (O) If the resource group is in the Offline state, a failover is occurring, or a virtual server is not operating normally, remove the cause of the

Message ID	Message	Description and Action
		problem and then try again. If the file system is not mounted, mount it, and then try again.
KAQM08109-E	An attempt to set the ACL has failed.	A conflict with another system administrator's operation or an internal error may have occurred. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM08110-E	The specified ACL cannot be set because the maximum number of ACLs have already been set.	The operation cannot be performed because the number of ACLs to be set in the specified directory exceeds the limit. (O) Delete any unnecessary ACLs set in the directory, and then retry execution.
KAQM08111-E	The ACL cannot be set because there is not enough space on the file system corresponding to the specified directory. (specified value = <i>directory-name</i>)	The amount of space on the file system is insufficient for setting an ACL. (O) Delete any unnecessary data or expand the file system capacity, and then retry execution.
KAQM08113-E	A syntax error exists in the specified ACL (specified value = <i>ACE</i>).	A syntax error exists in the ACL shown in (<i>specified-value</i>). (O) Specify a valid ACL.
KAQM08114-E	The specified ACL cannot be set because the specifications of the access ACL for Owner, Owner Group, and Other are insufficient.	When the <i>-s</i> option is specified to set an access ACL, the access ACL for Owner, Owner Group, and Other must also be specified. (O) When the <i>-s</i> option is specified to set an access ACL, include the access ACL for Owner, Owner Group, and Other.
KAQM08115-E	The specified ACL cannot be deleted because it is an access ACL for Owner, Owner Group, and Other, or it is a mask (specified value = <i>ACE</i>).	The access ACL for Owner, Owner Group, and Other, and the mask, cannot be deleted. (O) Specify an ACL other than a mask or an access ACL for Owner, Owner Group, and Other.

Message ID	Message	Description and Action
KAQM08116-E	The specified ACL cannot be deleted because a default ACL is set (specified value = <i>ACE</i>).	The mask for the default ACL cannot be deleted because a default ACL is set. (O) When deleting a mask for default ACLs, delete all of the default ACLs.
KAQM08118-E	An attempt to acquire information about file shares has failed.	An internal error may have occurred. (O) Inform the system administrator of the following information: Message ID: KAQM08118-E, Action: Retry execution. If this error occurs again, acquire all the Management log files, and then inform maintenance personnel. For a list of the Management log files, see the Help.
KAQM08119-E	The specified UID or GID (<i>UID-or-GID</i>) is invalid.	The specified UID or GID is invalid. (O) Enter a numerical value from 0 to 2147483147 for the ID. Do not enter a zero at the beginning of the value.
KAQM08121-E	An internal error occurred.	An internal error may have occurred. (O) Inform the system administrator of the following information: Message ID: KAQM08121-E, Action: Retry execution. If this error occurs again, acquire all the Management log files, and then inform maintenance personnel. For a list of the Management log files, see the Help.
KAQM08122-E	An attempt to create an NFS share has failed. (error detail = <i>error-details</i>)	An NFS shared directory already exists in a super- or sub-directory of the specified directory. (O) Specify a directory in which an NFS share does not exist in a super- or sub-directory, or delete the existing NFS share from the super- or sub-directory and then create the new NFS share.
KAQM08123-E	The <i>-e</i> option is not specified. When the <i>specified-option</i> option is specified, the <i>-e</i> option must be specified.	The <i>-e</i> option is not specified. (O) Please specify the <i>-e</i> option when you specify the <i>specified-option</i> option.
KAQM08124-E	The account type specification contains a syntax error. (ACE	The specified account type contains a syntax error. (O)

Message ID	Message	Description and Action
	= <i>specified-ACE</i> , account type = <i>specified-account-type</i>)	Specify the correct account type.
KAQM08125-E	The specified application destination contains a syntax error. (ACE = <i>specified-ACE</i> , application destination = <i>specified-application-destination</i>).	The specified application destination contains a syntax error. (O) Specify the correct application destination.
KAQM08126-E	The specified inheritance range contains a syntax error. (ACE = <i>specified-ACE</i> , inheritance range = <i>specified-inheritance-range</i>).	The specified inheritance range contains a syntax error. (O) Specify the correct inheritance range.
KAQM08127-E	The specified permission contains a syntax error. (ACE = <i>specified-ACE</i> , permission = <i>specified-permission</i>).	The specified permission contains a syntax error. (O) Specify the correct permission.
KAQM08129-E	The ACL type to be set is different from the ACL type that has already been set for the specified filesystem.	The ACL type to be set is different from the ACL type that has already been set for the specified filesystem. (O) Make sure the ACL type to be set is the same as the ACL type that has already been set for the specified filesystem, and then retry execution.
KAQM08130-E	An option or the argument of an option that cannot be specified for operating the file sharing with the file system of the Advanced ACL type was specified. (option = <i>option</i>)	An option or the argument of an option that cannot be specified for operating the file sharing with the file system of the Advanced ACL type was specified. (O) When you create a file share, in List of File Systems, check the ACL type of the file system corresponding to the specified directory, and specify the option correctly. When you edit a file share, in List of File Shares, check the ACL type of the file system for which the specified file sharing is made, and specify the option correctly.
KAQM08131-I	The specified ACL is not applied to subdirectories and files under the specified directory.	The specified ACL is not applied to subdirectories and files under the specified directory. (O) None.
KAQM08132-E	An attempt to acquire information about a file system's ACL type has failed. (error details= <i>error-details</i>)	An attempt to acquire information about a file system's ACL type has failed because of the reasons shown in (error details). (O)

Message ID	Message	Description and Action
		<p>Please retry the operation. If this error occurs again, acquire all Management log files and inform maintenance personnel. For a list of the Management log files, see the Help.</p> <p>Supplementary note:</p> <p>This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.</p>
KAQM08136-E	The specified directory did not exist or an error was detected while accessing a device file. (specified value = <i>directory-name</i>)	<p>The specified directory did not exist or an error was detected while accessing a device file.</p> <p>(O)</p> <p>Make sure that the directory exists, and then retry the operation. If the error occurs again, acquire all management log files, and then contact maintenance personnel. For a list of management log files, see Help.</p>
KAQM08137-E	A specified path is not a directory of the file system.	<p>The specified path does not start with "/mnt", or "/mnt" is specified.</p> <p>(O)</p> <p>Check the specified path, and then retry the operation.</p>
KAQM08138-E	The specified path includes "//".	<p>The specified path includes "//".</p> <p>(O)</p> <p>Make sure that "/" is not included in the path, and then retry the operation.</p>
KAQM08139-E	The specified path includes an invalid character.	<p>The specified path includes an invalid character.</p> <p>(O)</p> <p>Make sure that no invalid characters are included in the path, and then retry the operation.</p>
KAQM08140-E	The specified path exceeds 256 characters.	<p>The specified path exceeds 256 characters.</p> <p>(O)</p> <p>Specify the path by using a maximum of 256 characters.</p>
KAQM08141-E	The specified user name or group name includes characters with unsupported encoding.	<p>The specified user name or group name includes characters with unsupported encoding.</p> <p>(O)</p>

Message ID	Message	Description and Action
		Specify the name by using only characters with supported encoding.
KAQM08142-E	The argument specified for the <code>-o</code> option is invalid.	The argument specified for the <code>-o</code> option is invalid. (O) Specify a valid argument for the <code>-o</code> option, and then retry the operation.
KAQM08144-E	If you specify a "default" security flavor, you cannot specify another security flavor at the same time.	Both a "default" security flavor and at least one other security flavor were specified at the same time. (O) Specify only a "default" security flavor, or specify one or more non-"default" security flavors.
KAQM08147-E	There are no <i>protocol-name</i> shares in the specified file system.	There are no NFS or CIFS shares in the specified file system. (O) Specify a file system that has at least one NFS or CIFS file share.
KAQM08148-E	The specified file is not an information definition file for <i>protocol-name</i> shares.	The specified file is not an information definition file for NFS or CIFS shares. (O) Specify a valid information definition file.
KAQM08149-E	The specified file contains file share information for multiple file systems.	The specified file contains file share information for multiple file systems. (O) Specify a valid information definition file.
KAQM08150-E	The destination file system " <i>file-system-name</i> " already has a <i>protocol-name</i> share.	The destination file system already has a NFS or CIFS share. (O) Make sure that the specified information definition file is correct. If it is correct, delete any existing NFS or CIFS shares from the destination file system, and then retry the operation.
KAQM08151-E	Restoration of file share information failed, and then rollback of that restoration processing failed. (destination file system name = <i>file-system-name</i> , share protocol = <i>share-protocol</i> , cause of rollback failure = <i>message-ID</i>)	Rollback of restoration processing has failed. (O) Perform troubleshooting based on the message indicated for "cause". If you want to restore file share information, delete the existing NFS or CIFS shares from the destination file system, and then retry the operation.

Message ID	Message	Description and Action
KAQM08152-E	The official host name of the specified host exceeds 255 characters. (specified host name = <i>specified-host-name</i> , official host name = <i>official-host-name</i>)	The official host name of the specified host exceeds the maximum length. (O) Change the official host name so that it does not exceed the maximum length, or specify the IP address of the host; and then retry the operation.
KAQM08154-E	The specified directory cannot be deleted because it is being used as {the FTP login directory the SFTP login directory the TFTP access directory the CIFS access log save directory the output-destination for the performance statistics}. (specified directory = <i>directory-name</i>)	The specified directory cannot be deleted because it is being used by one or more functions. (O) Change the other function or functions so that they use a different directory, and then retry the operation.
KAQM08156-E	The combination of CIFS client cache settings is invalid.	If the CIFS client local cache setting is disabled, the CIFS client cache read-only setting cannot be enabled for when an access conflict occurs. (O) To enable the CIFS client cache read-only setting for when an access conflict occurs, enable the CIFS client local cache setting.
KAQM08157-E	The operation cannot be performed because the resource group is not running normally.	The operation cannot be performed because the resource group is not running normally. (O) Make sure that the resource group is running normally, and then retry the operation.
KAQM08158-E	The specified path includes a directory that is used by the system. (directory used by system = <i>directory-path</i>)	You cannot perform the operation on a path that contains a directory that is used by the system. (O) Specify a path that does not include a system directory, and then retry the operation.
KAQM08159-E	The specified parameter (<i>parameter-name</i>) contains non-UTF-8 characters.	The specified parameter contains non-UTF-8 characters. (O) Make sure that parameters are specified using UTF-8 and that the terminal setting is set to UTF-8, and then retry the operation.

Message ID	Message	Description and Action
KAQM08160-E	An attempt to create the past version directory has failed. (reason = {insufficient memory an I/O error no disk space some other error})	The attempt to create the past version directory failed due to the cause explained in the reason. (O) Refer to the error message KAQM37208-E in the management log file (<i>management.log</i>) for the failed directory. If the failure was caused by insufficient memory, wait a while, and then try again. If the cause was insufficient disk space, expand the file system, and then try again. Otherwise, acquire all the log data, and then contact maintenance personnel.
KAQM08161-E	An attempt to delete the past version directory has failed. (reason = {no such directory insufficient memory an I/O error no disk space currently being accessed some other error})	The attempt to delete the past version directory failed due to the cause explained in the reason. (O) Refer to the error message KAQM37225-E in the management log file (<i>management.log</i>) for the failed directory. If the failure was caused by insufficient memory, wait a while, and then try again. If the cause was insufficient disk space, expand the file system, and then try again. If the cause was the directory currently being accessed, request that access stop on the client. Otherwise, acquire all the log data, and then contact maintenance personnel.
KAQM08162-E	The directory specified for creating the past version directory is already in use. (path = <i>directory-path</i>)	The directory specified for creating the past version directory is already in use. (O) Move the files or directories from the specified path, and then try again.
KAQM08163-E	The specified file system has been mounted as read-only.	An attempt to create the past version directory failed because the specified file system has been mounted as read-only. (O) Mount the file system as read-write, and then try again.
KAQM08164-E	The operation cannot be performed because the specified directory is in a file system for which content sharing is set to On (the namespace access type is set to read-only). (specified value = <i>directory-name</i>)	The operation cannot be performed on a directory in a file system for which content sharing is set to On. (O) Check the directory, and then retry the operation.

Message ID	Message	Description and Action
KAQM08165-E	The specified shared directory does not exist. (entered data = <i>directory-name</i>)	<p>The directory path might be incorrect, a migration might not have been executed yet for the file system containing the shared data, or an error might have occurred while the shared data was being read from the HCP system. An error might occur while reading shared data from the HCP system for the following reasons:</p> <ol style="list-style-type: none"> 1. The ACL type of the file system that contains the data and the ACL type of the file system reading the data are different. 2. The file system reading the data is mounted as read-only. 3. A communication error occurred with the HCP system. <p>(O)</p> <p>Check the directory path. Check that the following enable shared data to be read from the HCP system: the file system and HCP settings, and the network status. If the settings are correct, wait until a migration is executed for the file system containing the shared data, or ask the system administrator managing the shared data to perform a migration as soon as possible.</p>
KAQM08166-E	An attempt to create the past version directory has failed. (reason = {insufficient memory an I/O error no disk space some other error})	<p>The attempt to create the past version directory failed due to the cause explained in the reason.</p> <p>(O)</p> <p>If the failure was caused by insufficient memory, wait a while, and then try again. If the cause was insufficient disk space, expand the file system, and then try again. Otherwise, acquire all the log data, and then contact maintenance personnel.</p>
KAQM08167-E	An attempt to delete the past version directory has failed. (reason = {no such directory insufficient memory an I/O error no disk space currently being accessed some other error})	<p>The attempt to delete the past version directory failed due to the cause explained in the reason.</p> <p>(O)</p> <p>If the failure was caused by insufficient memory, wait a while, and then try again. If the cause was insufficient disk space, expand the file system, and then try again. If the cause was the directory currently being accessed, request that access stop on the client.</p>

Message ID	Message	Description and Action
		Otherwise, acquire all the log data, and then contact maintenance personnel.
KAQM08168-E	The <i>option</i> option is not specified. When the <i>option</i> option is specified, the <i>option</i> option must be specified.	The <i>option</i> option is not specified. (O) Please specify the <i>option</i> option when you specify the <i>option</i> option.
KAQM08169-W	ACLs for all files and directories below the <i>directory-name</i> directory will not be set or will not be removed because the maximum number of directory levels for which ACLs can be set has been reached.	ACLs will not be set or will not be removed for files and directories more than 1,001 levels below the specified directory. (O) From a client, manually change the ACLs of any files or directories for which ACLs were not set or were not removed.
KAQM08171-E	The NFS file share cannot be created because the specified directory is in a file system for which home-directory roaming is enabled. (specified value = <i>specified-directory</i>)	An NFS file share cannot be created in a file system for which home-directory roaming is enabled. (O) Specify a directory in a file system for which home-directory roaming is not enabled, and then retry the operation.
KAQM08172-E	A CIFS file share cannot be created for a non-mount-point directory in a file system for which home-directory roaming is enabled.	In a file system for which home-directory roaming is enabled, a CIFS file share can only be created for the mount point of the file system. (O) Either specify the mount point of a file system for which home-directory roaming is enabled, or specify a directory in a file system for which home-directory roaming is not enabled, and then retry the operation.
KAQM08173-E	An invalid option or an invalid argument for an option was specified for a CIFS file share in a file system for which home-directory roaming is enabled. (option = <i>option</i>)	An invalid option or an invalid argument for an option was specified for a CIFS file share in a file system for which home-directory roaming is enabled. (O) To create or edit a CIFS file share in a file system for which home-directory roaming is enabled, specify the settings so that guest accounts are not granted access, and then try again.
KAQM08174-E	A CIFS file share in a file system for which home-directory roaming is enabled cannot be made available as read-only.	A CIFS file share in a file system for which home-directory roaming is enabled cannot be made available as read-only. (O)

Message ID	Message	Description and Action
		If the file system containing the specified directory is mounted as read-only, remount the file system as read/write, and then retry the operation. If read-only is set for the access permissions of the CIFS file share, set the permissions as read/write, and then retry the operation.
KAQM08175-E	The operation cannot be performed because the specified directory is in a file system for which home-directory roaming is enabled. (specified value = <i>specified-directory</i>)	The operation cannot be performed on a directory in a file system for which home-directory roaming is enabled. (O) Perform the operation on a directory in a file system for which home-directory roaming is enabled from a client.
KAQM08176-E	An option or the argument of an option that cannot be specified for operating the file sharing with the file system of the Classic ACL type was specified. (option = <i>option</i>)	An option or the argument of an option that cannot be specified for operating the file sharing with the file system of the Classic ACL type was specified. (O) When you create a file share, in List of File Systems, check the ACL type of the file system corresponding to the specified directory, and specify the option correctly. When you edit a file share, in List of File Shares, check the ACL type of the file system for which the specified file sharing is made, and specify the option correctly.
KAQM08177-E	The directory cannot be created because the ACL settings failed.	The number of ACEs set for the specified directory might have exceeded the limit, or an internal error might have occurred. (O) Delete any unnecessary ACEs set for the parent directory of the specified directory, and then retry the operation. If the problem cannot be resolved, acquire all the log data, and then contact maintenance personnel.
KAQM08178-E	Collection of file system setting information failed. (reason = {insufficient memory some other error})	Collection of file system setting information failed because of the provided reason. (O) If the failure was caused by insufficient memory, wait a while, and then retry the operation. In other cases, collect log data, and then contact maintenance personnel.
KAQM08179-I	The specified CIFS share has been configured to not use	The file system that is used for making the latest differential-data snapshot

Message ID	Message	Description and Action
	Volume Shadow Copy Service functionality because the share is on the file system that is used for making the latest differential-data snapshot.	cannot use Volume Shadow Copy Service functionality. (O) No action is required.
KAQM08180-E	A share cannot be created because the mount point of a file system linked with an HCP system on a per-share basis was specified.	To create a share in a file system linked with an HCP system on a per-share basis, create a share in the directory directly under the mount point. (O) If the file system is linked with an HCP system on a per-share basis, create a share in the directory directly under the mount point.
KAQM08181-E	The creation of the directory failed. A directory that is not directly under the mount point was specified in a file system that provides HCP data migrated on a per-share basis as read-only data.	If a file system provides HCP data migrated on a per-share basis as read-only data, create a directory directly under the mount point. (O) To create a directory, specify a path directly under the mount point.
KAQM08182-E	The specified directory cannot be deleted because a namespace is assigned to it on a per-share basis.	A namespace is assigned to the specified directory or a higher-level directory on a per-share basis. (O) Use the <code>arcstdel</code> command to delete the directory to which a namespace is assigned on a per-share basis.
KAQM08183-E	The operation cannot be performed on the specified directory, because it is in a read-write-content-sharing file system. (specified value = <i>specified-directory</i>)	The operation cannot be performed on a directory in a read-write-content-sharing file system. (O) To perform the operation on a directory in a read-write-content-sharing file system, use a client.
KAQM08184-E	A share cannot be created in a directory that is not a mount point of a read-write-content-sharing file system.	In a read-write-content-sharing file system, a share can be created only in a directory that is a mount point. (O) Specify a mount point in a read-write-content-sharing file system or a directory in a file system for which the read-write-content-sharing functionality is not enabled, and then try the operation again.
KAQM08185-E	The operation cannot be performed on a directory that is not a mount point of a	In a read-write-content-sharing file system, the operation can be performed only on a mount point.

Message ID	Message	Description and Action
	read-write-content-sharing file system. (specified value = <i>specified-directory</i>)	(O) To perform the operation on a directory in a read-write-content-sharing file system, use a client.
KAQM08186-I	The encryption setting for communication between the specified CIFS share and clients was changed to follow the CIFS service configuration definition. For this reason, the encryption method of communication might be changed.	The encryption setting for communication between the specified CIFS share and clients was changed to follow the CIFS service configuration definition. For this reason, the encryption method of communication might be changed. (O) Check the CIFS service configuration definition.
KAQM08187-W	The specified CIFS share was configured to encrypt communication with clients. However, communication cannot be encrypted because the SMB protocol currently being used is not SMB 3.0 or later.	The specified CIFS share was configured to encrypt communication with clients. However, communication cannot be encrypted because the SMB protocol currently being used is not SMB 3.0 or later. (O) To encrypt communication between the CIFS share and clients, set the SMB protocol to SMB 3.0 or later.
KAQM08188-E	Another operation is using the resources to be used for the requested processing.	Another operation might have exclusive use of some of the resources used for system file processing. (O) Wait a while, and then try again. If the problem persists, acquire all the log data, and then contact maintenance personnel.
KAQM08189-E	If Volume Shadow Copy Service is not used, checking for whether files have been modified cannot be enabled for differential-data snapshots.	If Volume Shadow Copy Service is not used, checking for whether files have been modified cannot be enabled for differential-data snapshots. (O) Make sure that the specified options and arguments are correct, and then try again.
KAQM08190-E	Checking for whether files have been modified for differential-data snapshots was changed to the setting according to the CIFS service configuration definition, because the setting was changed to not using Volume Shadow Copy Service.	When Volume Shadow Copy Service is not used, the setting to check whether files have been modified for differential-data snapshots is disabled. (O) No action is required.

Message ID	Message	Description and Action
KAQM08191-E	In a file system for which content sharing is set to On (the namespace access type is set to read-only), the operation cannot be performed on a directory that is synchronized with the data in an HCP system. (specified value = <i>directory-name</i>)	In a file system for which content sharing is set to On, the operation cannot be performed on a directory that is synchronized with the data in an HCP system. (O) Check and, if necessary, revise the directory, and then try again.
KAQM08192-W	Failed to restore the information about a file share that corresponds to a shared directory (<i>directory-path</i>), but processing continues.	A migration might not have been executed in the file system containing shared data, or an error might have occurred while the shared data was being read from the HCP system. An error might occur while reading shared data from the HCP system for the following reasons: (1) The ACL type of the file system that contains the data and the ACL type of the file system reading the data are different. (2) The file system reading the data is mounted as read-only. (3) A communication error occurred with the HCP system. (O) Check that the following enable shared data to be read from the HCP system: the file system and HCP settings, and the network status. If the settings are correct, wait until a migration is executed for the file system containing the shared data, or ask the system administrator managing the shared data to perform a migration as soon as possible. After that, check the directory path and then create a share.
KAQM08193-E	Failed to create a shared directory. (shared directory = <i>directory-path</i>)	The directory path might be incorrect, or an error might have occurred while the shared data was being read from the HCP system. An error might occur while reading shared data from the HCP system for the following reasons: (1) The ACL type of the file system that contains the data and the ACL type of the file system reading the data are different. (2) The file system reading the data is mounted as read-only. (3) A communication error occurred with the HCP system. (O)

Message ID	Message	Description and Action
		Check the path of the shared directory. Check that the following enable shared data to be read from the HCP system: the file system and HCP settings, and the network status. If the settings are correct, wait until a migration is executed for the file system containing the shared data, or ask the system administrator managing the shared data to perform a migration as soon as possible. After that, check the directory path and then retry the operation.
KAQM08194-E	The operation cannot be performed because a namespace is assigned to the specified directory on a per-share basis.	A namespace is assigned to the specified directory on a per-share basis. (O) Check the directory, and then retry the operation.

KAQM09 messages

This section explains messages that have a message ID beginning with KAQM09, and the actions to be taken if such messages appear.

Table 5-7 KAQM09 messages

Message ID	Message	Description and Action
KAQM09001-E	A new core file was found. (Dumped date= <i>generation-date</i> , Core file name= <i>file-name</i> , Size= <i>size</i> KB, Available OS disk space= <i>available-disk-space-of-OS-disk</i> MB, Usage rate of OS disk= <i>usage-rate-of-disk-space-of-OS-disk</i>).	A problem may have occurred. (O) Use a means such as the GUI to delete or download the core file.
KAQM09002-E	An attempt to uncompress the compressed <i>file-name</i> file failed.	A problem may exist in the processing that displays the compressed file, or the OS disk may be full. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. If you cannot acquire a log, inform maintenance personnel. See the help for a list of the Management log files.
KAQM09004-I	The log file (<i>file-name</i>) does not exist.	The log file (<i>file-name</i>) was deleted or may not exist. (O)

Message ID	Message	Description and Action
		No action is required.
KAQM09005-E	An attempt to delete the log file (<i>file-name</i>) failed.	The displayed log file was deleted by another system administrator or a problem may exist in the deletion processing. (O) Retry execution. Acquire the Management log files, and inform maintenance personnel if this error occurs again. See the help for a list of the Management log files.
KAQM09006-E	The core file automatic deletion time cannot be registered.	The number of core automatic deletion time registrations has reached the upper bound (48). (O) Delete any unnecessary core file automatic deletion times, and then register again.
KAQM09007-E	The period to save the file is invalid.	The upper bound (30) that can be specified for the period to save the file is exceeded. (O) Specify the period to save the file within the range from 0 to 30.
KAQM09008-E	An attempt to save administration information failed.	A problem may exist in the processing that stores administrative information. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM09009-W	The <i>program-name</i> program does not respond.	The <i>program-name</i> program may not start normally. (O) The program is automatically re-executed. Acquire all the Management log files, and contact maintenance personnel if the error occurs again. See the help for a list of the Management log files.
KAQM09016-E	An attempt to delete the log file (<i>file-name</i>) failed.	The displayed log file was deleted by another system administrator or a problem may exist in the deletion processing. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance

Message ID	Message	Description and Action
		personnel. See the help for a list of the Management log files.
KAQM09018-E	An attempt to read a file failed.	The file was deleted by another system administrator, a problem exists in the read processing of the displayed file, or the OS disk or virtual server OS LU might be full. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. If you cannot acquire a log, inform maintenance personnel. See the help for a list of the Management log files.
KAQM09019-E	A required item is not entered. (entered data= <i>entered-data</i>)	<i>entered-data</i> is not entered. (O) Enter <i>entered-data</i> .
KAQM09020-E	A required item is not entered. (entered data= <i>entered-data1 entered-data2</i>)	<i>entered-data1 entered-data2</i> is not entered. (O) Enter <i>entered-data1 entered-data2</i> .
KAQM09021-E	The data length of <i>entered-data</i> exceeds the range.	The entered length of <i>entered-data</i> exceeds 255. (O) Enter the input length within the range from 1 to 255.
KAQM09022-E	The data length of <i>entered-data</i> exceeds the range.	The entered length of <i>entered-data</i> exceeds 32. (O) Enter the input length within the range from 1 to 32.
KAQM09023-E	The data length of <i>entered-data</i> exceeds the range.	The entered length of <i>entered-data</i> exceeds 256 bytes. (O) Use from 1 to 256 bytes to enter the data.
KAQM09024-E	The data length of <i>entered-data</i> exceeds the range.	The entered length of <i>entered-data</i> exceeds 512 bytes. (O) Use from 1 to 512 bytes to enter the data.
KAQM09025-E	The data length of <i>entered-data</i> exceeds the range.	The entered length of <i>entered-data</i> exceeds 5 bytes. (O)

Message ID	Message	Description and Action
		Use from 1 to 5 bytes to enter the data.
KAQM09027-E	An attempt to delete the core file failed.	The core file was deleted by another system administrator or a problem may exist in the deletion processing of the core file. (O) Retry execution. Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM09038-E	An internal error occurred.	A conflict with another system administrator's operation or system error may have occurred. (O) Retry. Acquire all the Management log files if the error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM09039-E	An attempt to download a file failed.	The web browser settings might be inappropriate, the file was deleted by another system administrator, or there might be a problem in the download processing of the file. (O) Make sure the web browser settings are correct, and then try again. For details about the web browser settings, see the section that describes environment setup for a management console in the <i>Installation and Configuration Guide</i> . If this error occurs again, contact maintenance personnel.
KAQM09040-E	The entered <i>item-name</i> is incorrect.	A character that cannot be specified in <i>item-name</i> was entered. (O) Check the entered data, and then retry. Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM09041-E	An attempt to display the batch-download list failed.	A problem may exist in the processing that displays the batch-download list. (O)

Message ID	Message	Description and Action
		Retry execution. Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM09042-E	An attempt to acquire the license failed.	A problem may exist in the processing that acquires the license. (O) Retry execution. Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM09043-E	An attempt to delete the selected item failed.	The file was deleted by another system administrator or a problem may exist in the deletion processing of the selected items. (O) Retry execution. Acquire all the Management log files, and inform maintenance personnel if this error occurs again. See the help for a list of the Management log files.
KAQM09044-E	A mistake exists in the entry.	The entry is already registered, or the entry does not begin with an at mark (@). (O) Check the entry and then retry execution. Acquire the Management log files, and inform maintenance personnel if the error occurs again. See the help for a list of the Management log files.
KAQM09045-I	The selected log group cannot be deleted.	A file not yet supported for batch deletion might be selected. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM09046-E	Less than <i>size</i> MB are remaining where the log and core files are stored.	There is not much free space remaining, due to the amount of output data in the log and core files. (O) From the [List of RAS Information] screen, delete any unnecessary log or core files to free up more space for the log and core files.

Message ID	Message	Description and Action
KAQM09047-E	Less than <i>size</i> MB are remaining where the log and core files are stored.	There is not much free space remaining, due to the amount of output data in the log and core files. (O) From the [List of RAS Information] screen, delete any unnecessary log or core files to free up some more space for the log and core files.
KAQM09048-E	Less than <i>number</i> i-nodes are remaining where the log and core files are stored.	There are only a few i-nodes left, due to the amount of output data in the log and core files. (O) From the [List of RAS Information] screen, delete any unnecessary log or core files to free up some more i-nodes for the log and core files.
KAQM09049-E	Less than <i>number</i> i-nodes are remaining where the log and core files are stored.	There are very few i-nodes left, due to the amount of output data in the log and core files. (O) From the [List of RAS Information] screen, delete any unnecessary log or core files to free up some more i-nodes for the log and core files.
KAQM09050-E	Downloading is not possible.	The free space for the OS disk or virtual server OS LU might be insufficient. (O) Delete unnecessary core files and log files, and then retry execution. Contact maintenance personnel if the error occurs again.
KAQM09051-E	An attempt to acquire the CIFS service configuration, required for acquiring user mapping information, has failed.	An attempt to access the system files containing definitions for the LDAP server that stores user mapping information has failed. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM09052-E	An attempt to access the LDAP server that stores user mapping information has failed. (error details= <i>error-details</i>)	An attempt to access the LDAP server that stores user mapping information has failed because of the reasons indicated in the error details. (O) Make sure the following are correct: the LDAP server setting values in the

Message ID	Message	Description and Action
		CIFS service configuration definition, and the LDAP server settings. If the settings are correct, acquire all the Management log files, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM09053-E	An attempt to restart the SNMP agent failed.	The <code>/etc/snmp/snmpd.conf</code> file contains an error. (O) The contents of the error in the <code>/etc/snmp/snmpd.conf</code> file are output to the system log. In the List of RAS Information page (for <i>List of system logs</i>), check the contents of the error. Next, edit the SNMP information using the Edit SNMP window, or directly edit and correct the <code>/etc/snmp/snmpd.conf</code> file using the Edit System File window.
KAQM09054-E	User mapping information could not be downloaded because another system administrator was downloading the information.	Exclusive access to the user mapping information could not be set. (O) Wait a while, and then re-execute the same processing.
KAQM09055-E	An attempt to generate the network information file has failed.	An internal error might have occurred. (O) Retry execution. Acquire all the Management log files, and inform maintenance personnel if this error occurs again. See the help for a list of the Management log files.
KAQM09056-E	An attempt to acquire system activity data has failed.	An internal error might have occurred. (O) Retry execution. If the error occurs again, acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM09057-E	An attempt to acquire the LVM status has failed.	An internal error might have occurred. (O) Retry the operation. If the error occurs again, acquire all the log data and contact maintenance personnel.
KAQM09058-E	An attempt to acquire the selected log group has failed.	An internal error might have occurred. (O) Retry the operation. If the error occurs again, acquire all the log data, and then contact maintenance personnel.

Message ID	Message	Description and Action
KAQM09060-W	The directory for saving the CIFS access log (<i>specified-directory-name</i>) does not exist.	The directory for saving the CIFS access log does not exist in the file system. (O) Re-specify the directory for saving the CIFS access log. If the error occurs again, acquire all log data, and then contact maintenance personnel.
KAQM09061-W	The file system that contains the directory for saving the CIFS access log (<i>specified-directory-name</i>) is not mounted.	The file system that contains the directory for saving the CIFS access log is not mounted. (O) Mount the file system that contains the directory for saving the CIFS access log as read/write enabled. If the error occurs again, acquire all log data, and then contact maintenance personnel.
KAQM09062-W	The file system that contains the directory for saving the CIFS access log (<i>specified-directory-name</i>) is mounted as read-only.	The CIFS access log could not be saved because the file system was mounted as read-only. (O) Mount the file system that contains the directory for saving the CIFS access log as read/write enabled. If the error occurs again, acquire all log data, and then contact maintenance personnel.
KAQM09063-W	The directory for saving the CIFS access log (<i>specified-directory-name</i>) is specified using a relative path or symbolic link.	The directory for saving the CIFS access log is specified using a relative path or symbolic link. (O) Re-specify the directory for saving the CIFS access log using an absolute path. If the error occurs again, acquire all log data, and then contact maintenance personnel.
KAQM09064-W	The file system that contains the directory for saving the CIFS access log (<i>specified-directory-name</i>) is blocked.	The CIFS access log could not be saved because the file system was blocked. (O) Contact maintenance personnel.
KAQM09065-W	The CIFS access log could not be saved because the capacity of the directory was insufficient. (directory = <i>directory-name</i>)	The CIFS access log could not be saved because the capacity of the directory was insufficient. (O) Increase free space for the directory for saving the CIFS access log. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. If you cannot

Message ID	Message	Description and Action
		acquire a log, inform maintenance personnel. See the help for a list of the Management log files.
KAQM09066-W	An attempt to save the CIFS access log has failed.	There might be a problem in the internal processing. (O) Acquire all the Management log files, and inform maintenance personnel. See the help for a list of the Management log files. Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.
KAQM09067-E	The specified directory (<i>specified-directory-name</i>) does not exist.	The specified directory does not exist in the file system. (O) Check the specified directory, and then retry the operation. If the error occurs again, acquire all log data, and then contact maintenance personnel.
KAQM09068-E	The file system that contains the specified directory (<i>specified-directory-name</i>) is not mounted.	The file system that contains the specified directory is not mounted. (O) Mount the file system that contains the specified directory as read/write enabled. If the error occurs again, acquire all log data, and then contact maintenance personnel.
KAQM09069-E	The file system that contains the specified directory (<i>specified-directory-name</i>) is mounted as read-only.	The file system that contains the specified directory is mounted as read-only. (O) Specify a directory in the file system mounted as read/write enabled, or remount the file system as read/write enabled. If the error occurs again, acquire all log data, and then contact maintenance personnel.
KAQM09070-E	The specified directory (<i>specified-directory-name</i>) contains a relative path or symbolic link.	The specified directory contains a relative path or symbolic link. (O) Specify a directory using an absolute path and retry the operation. If the error occurs again, acquire all log data,

Message ID	Message	Description and Action
		and then contact maintenance personnel.
KAQM09071-E	The file system that contains the specified directory (<i>specified-directory-name</i>) is blocked.	The file system containing the specified directory is blocked. (O) Contact maintenance personnel.
KAQM09072-Q	Do you want to cancel saving the CIFS access log?(y/n)	This message appears when saving the CIFS access log is cancelled. (O) Enter y to cancel or n to continue, and then press the Enter key.
KAQM09073-E	An attempt to open a system file has failed.	An unexpected error occurred when opening a file. (O) Acquire all the Management log files, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM09074-E	An attempt to read a system file has failed.	An unexpected error occurred when reading a file. (O) Acquire all the Management log files, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM09075-E	An attempt to write a system file has failed.	An unexpected error occurred writing a file. (O) Acquire all the Management log files, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM09076-E	An invalid directory is specified as the directory for saving the CIFS access log.	An invalid directory is specified as the directory for saving the CIFS access log. (O) Use the <code>cifslogctl</code> command to re-specify the directory for saving the CIFS access log. If the error occurs again, acquire all log data, and then contact maintenance personnel.
KAQM09080-E	The directory for storing the CIFS access log has not been specified.	The directory for storing the CIFS access log has not been specified. (O) Use the <code>cifslogctl</code> command to specify the directory for storing the CIFS access log.

Message ID	Message	Description and Action
KAQM09081-E	An attempt to rotate the CIFS access log file has failed.	There might be a problem in internal processing. (O) Acquire all the Management log files, and contact maintenance personnel. See online Help for a list of the Management log files.
KAQM09082-E	The CIFS access log could not be saved because there was not enough free space in the storage directory. (directory = <i>directory-name</i>)	The CIFS access log could not be saved because there was not enough free space in the storage directory. (O) Increase the amount of free space in the directory for storing the CIFS access log.
KAQM09083-E	An attempt to save the CIFS access log has failed.	There might be a problem in internal processing. (O) Acquire all the Management log files, and contact maintenance personnel. See online Help for a list of the Management log files.
KAQM09084-E	The specified directory (<i>directory-name</i>) for storing the CIFS access log does not exist.	The specified directory for storing the CIFS access log does not exist in the file system. (O) Specify a different directory for storing the CIFS access log.
KAQM09085-E	The file system that contains the directory (<i>directory-name</i>) for storing the CIFS access log is not mounted.	The file system that contains the directory for storing the CIFS access log is not mounted. (O) Mount the file system, which contains the directory for storing the CIFS access log, as read/write permitted.
KAQM09086-E	The file system that contains the directory (<i>directory-name</i>) for storing the CIFS access log is mounted as read-only.	The file system that contains the directory for storing the CIFS access log is mounted as read-only. (O) Mount the file system, which contains the directory for storing the CIFS access log, as read/write permitted.
KAQM09087-E	The directory (<i>directory-name</i>) for storing the CIFS access log has been specified by using a relative path or symbolic link.	The directory for storing the CIFS access log has been specified by using a relative path or symbolic link. (O) Use an absolute path to specify the directory for storing the CIFS access log.

Message ID	Message	Description and Action
KAQM09088-E	The file system that contains the directory (<i>directory-name</i>) for storing the CIFS access log is blocked.	The file system that contains the directory for storing the CIFS access log is blocked. (O) Contact maintenance personnel.
KAQM09089-E	Collection of CIFS access log data is disabled.	Collection of CIFS access log data is disabled. (O) Enable collection of CIFS access log data.
KAQM09100-E	An internal error occurred.	Processing might be temporarily unavailable, or there might be a problem in the internal processing. (O) Wait a while, and then re-execute the same processing. If an error occurs again, acquire all of the Management log files, and then inform maintenance personnel. See online Help for a list of the Management log files.
KAQM09101-E	An attempt to connect to the specified FTP server has failed.	The value specified as the FTP server is incorrect, the FTP server might not be operating normally, or a network error might have occurred. (O) Make sure that the value specified as the FTP server is correct, the FTP server is operating normally, and no network error has occurred. Also, the connection to the FTP server might not have been possible because the load on the node, FTP server, and network was high. After the load returns to normal (not high), retry the operation.
KAQM09102-E	An attempt to log in to the FTP server has failed.	The specified user name or password is incorrect. (O) Make sure that the user name is correct. If it is correct, enter the password again, and then retry the operation. If an error occurs again, make sure that the user is registered in the specified FTP server.
KAQM09103-E	An attempt to move to the specified directory has failed.	The value specified as the directory is incorrect, the directory does not exist, or the directory cannot be accessed by the specified user name. (O)

Message ID	Message	Description and Action
		Make sure that the value specified as the directory is correct. If the value is correct, make sure that the directory exists in the specified FTP server. If the directory exists, make sure that the directory can be accessed by the specified user name.
KAQM09104-E	An attempt to transfer the file has failed.	A problem might have occurred during processing to transfer the file. (O) Make sure the FTP server is operating normally, no network errors have occurred, and files can be written to the directory of the FTP server. Then, retry the operation. If an error occurs again, acquire all the log data, and then contact maintenance personnel.
KAQM09105-E	An attempt to acquire the status of the connection between the external server and the node has failed.	An internal error might have occurred. (O) Retry execution. If the error occurs again, acquire all the Management log files, and then contact maintenance personnel. See Help for a list of the Management log files.
KAQM09108-E	The directory (<i>directory-name</i>) for storing the CIFS access logs cannot be used because it is on a file system for which content sharing is set to "On" (the namespace access type is set to read-only).	A file system for which content sharing is set to "On" cannot be used to store the CIFS access logs. (O) Specify a valid directory for storing the CIFS access logs, and then retry the operation.
KAQM09109-W	The CIFS access logs cannot be saved because the directory for storing the CIFS access logs (<i>directory-name</i>) is in a file system for which content sharing is set to "On" (the namespace access type is set to read-only).	CIFS access logs cannot be saved in a file system for which content sharing is set to "On". (O) Specify a valid directory for storing the CIFS access logs.
KAQM09111-E	Acquisition of the log failed.	An internal error might have occurred. (O) Retry the operation. If the error occurs again, contact maintenance personnel.
KAQM09112-E	The email notification settings were successfully set.	This message notifies the user that the email notification settings were successfully set. (O) No action is required.

Message ID	Message	Description and Action
KAQM09113-E	Email notification failed. (message ID that was to be used = <i>message-id</i>)	Email notification failed. Communication with the SMTP server might have failed. (O) Confirm the following, and then take appropriate action: (1) The email notification settings are valid. (2) Name resolution of the SMTP server has not failed. (3) There are no problems communicating with the SMTP server. (4) The SMTP server is running properly. (5) The SMTP server configuration has not changed. If this message continues to be output even after the problem is resolved, acquire all the Management log files, and then contact maintenance personnel.
KAQM09114-E	Email notification failed because there is not enough memory. (message ID that was to be used = <i>message-id</i>)	Email notification failed because there is not enough memory. (O) If this message continues to be output, acquire all the Management log files, and then contact maintenance personnel.
KAQM09115-E	Email notification failed because a system file failed to be updated. (message ID that was to be used = <i>message-id</i>)	Email notification failed because a system file failed to be updated. (O) Acquire all the Management log files, and then contact maintenance personnel.
KAQM09116-E	Email notification failed because another process is using one or more required resources. (message ID that was to be used = <i>message-id</i>)	Email notification failed because another process is using one or more required resources. (O) If this message continues to be output, acquire all the Management log files, and then contact maintenance personnel.
KAQM09117-E	Email notification failed because an unexpected error occurred.	Email notification failed because an unexpected error occurred. (O) Acquire all the Management log files, and then contact maintenance personnel.

Message ID	Message	Description and Action
KAQM09118-E	The directory (<i>directory-name</i>) for storing the CIFS access logs cannot be used because it is on a file system for which home-directory roaming is enabled.	A file system for which home-directory roaming is enabled cannot be used to store the CIFS access logs. (O) Specify a valid directory for storing the CIFS access logs, and then retry the operation.
KAQM09119-W	The CIFS access logs cannot be saved because the directory (<i>directory-name</i>) for storing the CIFS access logs is on a file system for which home-directory roaming is enabled.	CIFS access logs cannot be saved to a file system for which home-directory roaming is enabled. (O) Specify a valid directory for storing the CIFS access logs.
KAQM09201-E	The format of the performance statistics transfer settings file is incorrect. Failed to transfer the performance statistics.	The format of the path information listed in the performance statistics transfer settings file is incorrect. (O) Check the information listed in the performance statistics transfer settings file.
KAQM09202-E	The output-destination directory for the performance statistics (<i>directory-name</i>) does not exist.	The output-destination directory for the performance statistics does not exist in the file system. (O) Re-specify the output-destination directory for the performance statistics. If the error occurs again, acquire all log data, and then contact maintenance personnel.
KAQM09203-E	The output-destination directory for the performance statistics (<i>directory-name</i>) is specified using a relative path or symbolic link.	The output-destination directory for the performance statistics is specified using a relative path or symbolic link. (O) Re-specify the output-destination directory for the performance statistics using an absolute path. If the error occurs again, acquire all log data, and then contact maintenance personnel.
KAQM09204-E	Failed to transfer the performance statistics. The file system in which the output-destination directory (<i>directory-name</i>) exists has not been mounted. This might be due to the resource group being in the Offline state, a failover occurring, or the virtual server not running normally.	The file system that contains the output-destination directory for the performance statistics is not mounted. This might be due to the resource group being in the Offline state, a failover occurring, or the virtual server not running normally. (O) If the resource group is in the Offline state, a failover is occurring, or a virtual server is not running normally,

Message ID	Message	Description and Action
		remove the cause of the problem. If the file system is not mounted, mount the file system.
KAQM09205-E	The file system that contains the output-destination directory for the performance statistics (<i>directory-name</i>) is mounted as read-only.	The performance statistics could not be transferred because the file system was mounted as read-only. (O) Mount the file system that contains the output-destination directory for the performance statistics as read/write enabled. If the error occurs again, acquire all log data, and then contact maintenance personnel.
KAQM09206-E	The file system that contains the output-destination directory for the performance statistics (<i>directory-name</i>) is blocked.	The performance statistics could not be transferred because the file system was blocked. (O) Contact maintenance personnel.
KAQM09207-E	Failed to transfer the performance statistics.	There might be a problem in the internal processing. (O) Acquire all the Management log files, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM09208-E	The performance statistics could not be transferred because the output-destination directory for the performance statistics (<i>directory-name</i>) is in a file system for which content sharing is set to "On" (the namespace access type is set to read-only).	The performance statistics could not be transferred in a file system for which content sharing is set to "On". (O) Specify a valid directory to which the performance statistics can be transferred.
KAQM09209-E	The performance statistics could not be transferred because the output-destination directory for the performance statistics (<i>directory-name</i>) is on a file system for which home-directory roaming is enabled.	The performance statistics could not be transferred to a file system for which home-directory roaming is enabled. (O) Specify a valid directory to which the performance statistics can be transferred.
KAQM09212-E	Failed to update the settings information. (detailed message = <i>detailed-message</i>)	The processing was interrupted because an error occurred during an attempt to update the settings information. (O) Check the detailed message, remove the cause, and then try to update the settings information again. If the

Message ID	Message	Description and Action
		problem persists, acquire all the log data, and then contact maintenance personnel.
KAQM09213-I	The performance statistics to be transferred does not exist.	The performance statistics to be transferred does not exist. (O) No action is necessary.
KAQM09215-E	The directory (<i>directory-name</i>) cannot be used to store the CIFS access logs, because it is in a read-write-content-sharing file system.	A read-write-content-sharing file system cannot be used to store the CIFS access logs. (O) Specify a valid directory for storing the CIFS access logs, and then retry the operation.
KAQM09216-W	CIFS access logs cannot be saved to the directory (<i>directory-name</i>), because it is in a read-write-content-sharing file system.	CIFS access logs cannot be saved in a read-write-content-sharing file system. (O) Specify a valid directory for storing the CIFS access logs.
KAQM09217-Q	Do you want to cancel the setting of the output-destination directory for the performance statistics? (y/n)	This message is displayed when canceling the settings of the output-destination directory for the performance statistics. (O) Enter y to cancel or n to continue, and then press the Enter key.
KAQM09218-E	Internal processing failed.	Another operation might have exclusive use of some of the resources used for system file processing. (O) Wait a while, and then try again. If the problem persists, acquire all the log data, and then contact maintenance personnel.
KAQM09220-E	The performance statistics could not be transferred because the output-destination directory already contains a file with the same name. (performance statistics that could not be transferred = <i>Absolute-path-of-the-performance-statistics-that-could-not-be-transferred</i>)	The performance statistics could not be transferred because the output-destination directory already contains a file with the same name. (O) Change the name of the file with the same name in the output-destination directory. If the error occurs again, acquire all log data, and then contact maintenance personnel.
KAQM09221-E	Failed to transfer the performance statistics. (directory = <i>directory-name</i>)	An error occurred during an attempt to obtain or transfer performance statistics because there was

Message ID	Message	Description and Action
		insufficient disk space, an I/O error, or insufficient memory. (O) Make sure that there is sufficient free capacity in the file system. If no problem exists, make sure that the status of the system and file system are normal. If the problem persists, acquire all the log data, and then contact maintenance personnel.
KAQM09222-E	Failed to transfer the performance statistics. The path to the output-destination directory includes a directory that is used by the system. (output-destination directory = <i>directory-path</i>)	A path that contains a directory that is used by the system is specified as the output destination for the performance statistics. (O) For the output destination for the performance statistics, specify a path that does not include a system directory.
KAQM09223-E	Failed to transfer the performance statistics.	Another operation might have exclusive use of some of the resources used for system file processing. (O) Make sure that the status of the system and file system are normal. If the problem persists, acquire all the log data, and then contact maintenance personnel.

KAQM12 messages

This section explains messages that have a message ID beginning with KAQM12, and the actions to be taken if such messages appear.

Table 5-8 KAQM12 messages

Message ID	Message	Description and Action
KAQM12001-E	The entered value for the block limits is incorrect.	A character other than a numerical value is entered in the block limit value. (O) Enter a numerical value.
KAQM12002-E	The entered value for the i-node limits is incorrect.	A character other than a numerical value is entered in the i-node limit value. (O) Enter a numerical value.

Message ID	Message	Description and Action
KAQM12003-E	A value larger than the hard limit was specified for the soft limit.	The setting of a soft limit value exceeding the hard limit value cannot be performed. (O) Enter a soft limit value no greater than the hard limit value.
KAQM12004-E	A character other than a numerical character is specified for the block grace period or i-node grace period.	A character other than a numerical character is specified for the block grace period or i-node grace period. (O) Enter a numerical value.
KAQM12005-E	The specified file system does not exist in the operating node or the virtual server.	The specified file system might have been deleted by another system administrator. When using a command, a file system that is not registered in the system might have been specified. (O) If you are using the GUI, the most recent information about the file system might not be displayed. Execute refresh processing, and then respecify the file systems for which a quota is to be set. If you are using a command, in List of File Systems, check that the file system name is correct, and then retry the operation.
KAQM12006-E	A value smaller than the current usage amount was entered for the hard limit for block usage or hard limit for i-node usage. (user name = <i>user-name</i> , UID = <i>user-ID</i> , block usage = <i>block-usage</i> , i-node usage = <i>i-node-usage</i>)	A value smaller than the current usage amount cannot be set for the hard limit for block usage or hard limit for i-node usage. (O) Enter a value equal to or larger than the current usage amount.
KAQM12007-E	A user or group that is not registered in the system or cannot perform quota settings has been specified. (user or group = <i>user-or-group</i>)	The specified user or group might have been deleted by another system administrator. Alternatively, if a directory server is being used, connection to the server might not have been possible. If a command was executed, a user or group that is not registered in the system or that cannot perform quota settings might have been specified. (O) If you are using a directory server, make sure that connection to the server is possible. If you are not using a server, or if connection to the server is possible then, when using the GUI, return to the List of Quota Information,

Message ID	Message	Description and Action
		and then respecify the user or group that performs quota settings. Also, if using commands, make sure that the specified user or group is registered in the system and that it can perform quota settings, and then retry the operation.
KAQM12008-E	The number of monitoring time settings has reached the maximum.	You are attempting to specify a monitoring time that exceeds the maximum setting for the monitoring time. (O) Retry after deleting the unneeded monitoring time settings. See the help for the maximum number of monitoring time settings.
KAQM12009-E	An attempt to access a system file (crontab) failed.	An attempt to open a system file (crontab) failed. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM12010-E	An attempt to acquire quota setting information has failed.	A registered user ID or group ID exceeds 2147483647, or an error might have occurred while acquiring the quota settings. (O) Make sure that no registered user ID or group ID exceeds 2147483647, and then try again. If the error occurs again, acquire all the Management log files, and then inform maintenance personnel. See the Help for a list of the Management log files. Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.
KAQM12011-E	Acquisition of the grace period information failed because of an unexpected error in internal processing.	A problem may exist in the acquisition processing of the grace period information. (O) Acquire all the Management log files, and then inform maintenance

Message ID	Message	Description and Action
		<p>personnel. See the help for a list of the Management log files.</p> <p>Supplementary note:</p> <p>This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.</p>
KAQM12012-E	<p>The setting of quota information failed either because the file system was blocked due to insufficient capacity of the differential-data storage device, or because of an internal processing error.</p>	<p>The file system might be blocked due to insufficient capacity of the differential-data storage device, or there might be a problem in the processing to set quota information.</p> <p>(O)</p> <p>In [List of File Systems], check the status indicated for the file system, and then take action appropriate for the status. If the status does not indicate a problem, acquire all the Management log files, and then contact maintenance personnel. See Help for a list of the Management log files.</p> <p>Supplementary note:</p> <p>This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.</p>
KAQM12013-E	<p>The updating of the grace period failed either because the file system was blocked due to insufficient capacity of the differential-data storage device, or because of an internal processing error.</p>	<p>The file system might be blocked due to insufficient capacity of the differential-data storage device, or there might be a problem in the update processing of the grace period information.</p> <p>(O)</p> <p>In [List of File Systems], check the status indicated for the file system, and then take action appropriate for the status. If the status does not indicate a problem, acquire all the Management log files, and then contact maintenance personnel. See Help for a list of the Management log files.</p> <p>Supplementary note:</p>

Message ID	Message	Description and Action
		This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.
KAQM12014-E	Editing of the monitoring time failed because of an unexpected error in internal processing.	A problem may exist in the editing processing of the monitoring time. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM12017-E	The file system is not selected.	A file system has not been selected, so execution cannot start. (O) Retry after selecting a file system.
KAQM12018-E	The user or group is not selected.	A user or a group has not been selected, so execution cannot start. (O) Retry after selecting a user or a group.
KAQM12019-E	A shared directory is not selected.	A shared directory has not been selected, so execution cannot start. (O) Retry after selecting a shared directory.
KAQM12020-E	The block limit value exceeds the maximum.	The block limit value exceeds the maximum, so execution cannot start. (O) Retry after entering a value no greater than the maximum setting for a block limit value (1,073,741,823MB, 1,048,575GB or 1,023TB).
KAQM12021-E	The i-node limit value exceeds the maximum.	The i-node limit value exceeds the maximum, so execution cannot start. (O) Retry after entering a value no greater than the maximum setting value for an i-node limit value (4,294,967,295).
KAQM12022-E	No grace period is entered.	The grace period is not entered. (O) Enter a grace period and retry.
KAQM12023-E	The specified value for the grace period is invalid.	A value other than from 1 to 9,999 was specified for the grace period. (O)

Message ID	Message	Description and Action
		Specify a value from 1 to 9,999 for the grace period, and then try again.
KAQM12024-E	A limit value was not entered.	A limit value was not entered. (O) Enter a limit value, and then retry.
KAQM12025-E	A file system with Quota applied is unmounted.	Quota does not apply to unmounted file systems. (O) If you are using the GUI, the most recent information about the file system might not be displayed. Execute refresh processing, specify the mounted file system, and then retry the operation. If you are using a command, in List of File Systems, make sure that the file system is mounted, and then retry the operation.
KAQM12026-E	The target file system was mounted without the Quota function being specified.	The operation is not possible because the target file system was mounted without the Quota function being specified. (O) If you are using the GUI, the most recent information about the file system might not be displayed. Execute refresh processing, specify the Quota function, mount the target file system, and then retry the operation. If you are using a command, specify the Quota function in the mount options, and then re-execute the command.
KAQM12027-E	An internal error occurred.	A conflict with another system administrator's operation or system error may have occurred. (O) Retry. Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM12028-E	The selected file share does not exist.	Since the selected file share has been deleted by the system administrator, you cannot view quota information. (O) Select another file share, and then retry.
KAQM12029-E	The file system does not exist.	Since the file system has been deleted by the system administrator, you cannot view quota information.

Message ID	Message	Description and Action
		(O) Select another shared directory or another file share name, and then retry.
KAQM12030-E	An attempt to acquire quota setting information has failed.	A registered user ID or group ID exceeds 2147483647, or an error might have occurred while acquiring the quota settings. (O) Inform the system administrator of the following information: Message ID: KAQM12030-E, Action: Make sure that no registered user ID or group ID exceeds 2147483647, and then try again. If the error occurs again, acquire all the Management log files, and then inform maintenance personnel. See the Help for a list of the Management log files.
KAQM12031-E	An attempt to acquire the grace period information has failed.	A problem may exist in the acquisition processing of the grace period information. (O) Inform the system administrator of the following contents. Message ID: KAQM12031-E, Action: Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM12032-E	The file system is unmounted.	Since the file system has been unmounted by the system administrator, you cannot view quota information. (O) Select another shared directory or another file share name, and then retry.
KAQM12033-E	The Quota setting is not applied as a mount option of the file system.	Since the Quota setting is not applied as a mount option of the file system, you cannot view quota information. (O) Select another shared directory or another file share name, and then retry.
KAQM12034-E	The selected shared directory or the selected file share name does not exist.	Since the selected shared directory or the selected file share name has been deleted by the system administrator, you cannot view quota information. (O)

Message ID	Message	Description and Action
		Select another shared directory or another file share name, and then retry.
KAQM12035-E	The entered value for the block limit is invalid.	A zero cannot be specified at the beginning of a block limit. (O) Enter a numerical value that does not start with 0.
KAQM12036-E	The entered value for the i-node limit is invalid.	A zero cannot be specified at the beginning of an i-node limit. (O) Enter a numerical value that does not start with 0.
KAQM12037-E	The capacity of the differential-data storage device is insufficient.	This operation cannot be performed because the capacity of the differential-data storage device is insufficient. (O) Inform the system administrator of the following information. Message ID: KAQM12037-E, Action: Resolve the problem by using file snapshot functionality operations. For details on the operation, see the help.
KAQM12038-E	The file snapshot functionality has not been installed.	This operation cannot be performed because the file snapshot functionality has not been installed. (O) Inform the system administrator of the following information. Message ID: KAQM12038-E, Action: To perform this operation on the specified differential-data snapshot, first install the file snapshot functionality.
KAQM12039-E	The specified operation failed because of a reason such as an error in the file system or in the device files that make up the storage device.	An error occurred in the file system or in the device files that make up the different-data storage device. (O) Inform the system administrator of the following information: Message ID: KAQM12039-E, Action: Make sure that the resource group or virtual server is in the Online state. If it is in the Online state and you cannot resolve the problem, contact maintenance personnel.
KAQM12040-E	An error occurred in the cluster management LU or a system file.	An error occurred in the cluster management LU or a system file, or the cluster management LU is blocked.

Message ID	Message	Description and Action
		(O) Inform the system administrator of the following information. Message ID: KAQM12040-E, Action: Inform maintenance personnel.
KAQM12041-E	A value smaller than the current usage amount was entered for the hard limit for block usage or hard limit for i-node usage. (group name = <i>group-name</i> , GID = <i>group-ID</i> , block usage = <i>block-usage</i> , i-node usage = <i>i-node-usage</i>)	A value smaller than the current usage amount cannot be set for the hard limit for block usage or hard limit for i-node usage. (O) Enter a value equal to or larger than the current usage amount.
KAQM12042-E	The specified operation failed because of a reason such as the file system being blocked.	The file system or the device file being used by the file system is blocked. (O) Inform the system administrator of the following information. Message ID: KAQM12042-E. Action: Check the status of the file system and device files by referring to the troubleshooting information in the help, and then resolve the error with the help of maintenance personnel. Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.
KAQM12043-E	This operation cannot be performed because the specified file system is a read-only snapshot.	The specified file system is a read-only snapshot. (O) None.
KAQM12044-E	This operation cannot be performed because the specified file system is a differential-data snapshot.	The specified file system is a differential-data snapshot. (O) None.
KAQM12045-I	A quota soft limit was exceeded. (generating time = <i>trap-generation-time</i> , Physical Node host name or virtual server name = <i>physical-node-host-name-or-virtual-server-name</i> , node number = <i>node-number</i> , equipment identification number = <i>equipment-identification-</i>	A quota soft limit was exceeded. (O) Use the <code>quotaget</code> command to check which user or group exceeded the quota soft limit or the grace period. Then, if necessary, inform the end user of the usage amount.

Message ID	Message	Description and Action
	<p><i>number</i>, file system name = <i>file-system-name</i>, number of users exceeding the block soft limit = <i>number-of-users</i>, number of groups exceeding the block soft limit = <i>number-of-groups</i>, number of users exceeding the block grace period = <i>number-of-users</i>, number of groups exceeding the block grace period = <i>number-of-groups</i>, number of users exceeding the i-node soft limit = <i>number-of-users</i>, number of groups exceeding the i-node soft limit = <i>number-of-groups</i>, number of users exceeding the i-node grace period = <i>number-of-users</i>, number of groups exceeding the i-node grace period = <i>number-of-groups</i>)</p>	
KAQM12046-E	The specified value for the monitoring time is invalid.	<p>The specified value for the monitoring time is not in the date format. (O) Specify the value in the date format, and then try again.</p>
KAQM12047-E	The specified value for the monitoring time is invalid.	<p>The specified value for the minutes is not a multiple of five. (O) Specify the monitoring time as a multiple of five (0-55) minutes, and then try again.</p>
KAQM12048-E	An attempt to acquire information about the group to which the user belongs has failed.	<p>The group to which the user belongs might not be registered in the system. Alternatively, if the group is managed by an NIS server or an LDAP server, connection to the server might not have been possible. (O) Inform the system administrator of the following information. Message ID: KAQM12048-E, Action: If you are using an NIS server or an LDAP server, make sure that connection to the server is possible. If you are not using a server, or if connection to the server was possible, make sure that the group to which the user belongs is registered in the system. If the group is registered in the system, acquire all the Management log files, and then inform</p>

Message ID	Message	Description and Action
		maintenance personnel. For a list of the Management log files, see the Help.
KAQM12050-E	The specified notification mode cannot be changed.	Only the notification mode cannot be changed, because a monitoring time is not set. (O) Set one or more monitoring times, and then try again.
KAQM12051-E	The specified value for the grace period is invalid.	A zero cannot be specified at the beginning of a grace period. (O) Specify a numerical value that does not start with 0.
KAQM12052-E	A file operation failed.	A problem might exist in the processing of the OS disk, virtual server OS disk, or system file. (O) Check the settings and whether a problem exists on the OS disk or virtual server OS disk. If you cannot resolve the problem, acquire all the Management log files, and then contact maintenance personnel. See Help for a list of the Management log files.
KAQM12053-E	An internal error occurred.	A system error might have occurred. (O) Retry the operation. Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM12056-E	The specified operation cannot be performed because the number of users exceeds the maximum number displayable in the window.	The number of users exceeds the maximum number displayable in the window. (O) Change to the command operation mode, or use the <code>quotaget</code> or <code>quotaset</code> command.
KAQM12057-E	The specified operation cannot be performed because the number of groups exceeds the maximum number displayable in the window.	The number of groups exceeds the maximum number displayable in the window. (O) Change to the command operation mode, or use the <code>quotaget</code> or <code>quotaset</code> command.

Message ID	Message	Description and Action
KAQM12058-E	The specified file system is blocked.	<p>The specified file system or a device file being used by the file system is blocked.</p> <p>(O)</p> <p>Check the status of the file system and device files by referring to the troubleshooting information in the help, and then resolve the error with the help of maintenance personnel.</p> <p>Supplementary note:</p> <p>This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.</p>
KAQM12059-I	A subtree quota soft limit was exceeded. (generation date and time = <i>trap-generation-date-and-time</i> , Physical Node host name or virtual server name = <i>physical-node-host-name-or-virtual-server-name</i> , node number = <i>node-number</i> , equipment identification number = <i>equipment-identification-number</i> , file system name = <i>file-system-name</i> , directory name = <i>directory-name</i>)	<p>A subtree quota soft limit was exceeded.</p> <p>(O)</p> <p>Use the <code>stquota</code> command to check the soft limit, grace period, and usage amount. Then, if necessary, inform the end user of the usage amount.</p>
KAQM12060-I	A subtree quota soft limit was exceeded. (generation date and time = <i>trap-generation-date-and-time</i> , Physical Node host name or virtual server name = <i>physical-node-host-name-or-virtual-server-name</i> , node number = <i>node-number</i> , equipment identification number = <i>equipment-identification-number</i> , file system name = <i>file-system-name</i> , number of directories exceeding the block soft limit = <i>number-of-directories</i> , number of directories exceeding the block grace period = <i>number-of-directories</i> , number of directories exceeding the i-node soft limit = <i>number-of-</i>	<p>A subtree quota soft limit was exceeded.</p> <p>(O)</p> <p>Use the <code>stquota</code> command to check the soft limit, grace period, and usage amount. Then, if necessary, inform the end user of the usage amount.</p>

Message ID	Message	Description and Action
	<i>directories</i> , number of directories exceeding the i-node grace period = <i>number-of-directories</i>)	
KAQM12061-I	A subtree quota that was set to a user or group soft limit was exceeded. (generation date and time = <i>trap-generation-date-and-time</i> , Physical Node host name or virtual server name = <i>physical-node-host-name-or-virtual-server-name</i> , node number = <i>node-number</i> , equipment identification number = <i>equipment-identification-number</i> , file system name = <i>file-system-name</i> , directory name = <i>directory-name</i> , number of users exceeding the block soft limit = <i>number-of-users</i> , number of groups exceeding the block soft limit = <i>number-of-groups</i> , number of users exceeding the block grace period = <i>number-of-users</i> , number of groups exceeding the block grace period = <i>number-of-groups</i> , number of users exceeding the i-node soft limit = <i>number-of-users</i> , number of groups exceeding the i-node soft limit = <i>number-of-groups</i> , number of users exceeding the i-node grace period = <i>number-of-users</i> , number of groups exceeding the i-node grace period = <i>number-of-groups</i>)	A subtree quota that was set to a user or group soft limit was exceeded. (O) Use the <code>stquotalist</code> command to check which user or group exceeded the soft limit or the grace period of the subtree quota. Then, if necessary, inform the end user of the usage amount.
KAQM12062-I	A subtree quota that was set to a user or group soft limit was exceeded. (generation date and time = <i>trap-generation-date-and-time</i> , Physical Node host name or virtual server name = <i>physical-node-host-name-or-virtual-server-name</i> , node number = <i>node-number</i> , equipment identification number = <i>equipment-identification-number</i> , file system name = <i>file-system-name</i> , number of directories	A subtree quota that was set to a user or group soft limit was exceeded. (O) Use the <code>stquota</code> command and the <code>stquotalist</code> command to check which user or group exceeded the soft limit or the grace period. Then, if necessary, inform the end user of the usage amount.

Message ID	Message	Description and Action
	<p>that have users exceeding the block soft limit = <i>number-of-directories</i>, number of directories that have groups exceeding the block soft limit = <i>number-of-directories</i>, number of directories that have groups exceeding the block grace period = <i>number-of-directories</i>, number of directories that have groups exceeding the block grace period = <i>number-of-directories</i>, number of directories that have users exceeding the i-node soft limit = <i>number-of-directories</i>, number of directories that have groups exceeding the i-node soft limit = <i>number-of-directories</i>, number of directories that have users exceeding the i-node grace period = <i>number-of-directories</i>, number of directories that have groups exceeding the i-node grace period = <i>number-of-directories</i>)</p>

KAQM13 messages

This section explains messages that have a message ID beginning with KAQM13, and the actions to be taken if such messages appear.

Table 5-9 KAQM13 messages

Message ID	Message	Description and Action
KAQM13019-E	An attempt to read the management information has failed.	An error occurred in the cluster management LU or in the OS disk. (O) Confirm that the system LU settings are correct and that there are no problems, and then retry execution. Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM13037-E	An attempt to update the management information has failed.	An error occurred in the cluster management LU or in the OS disk. (O) Confirm that the system LU settings are correct and that there are no problems, and then retry execution. Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See

Message ID	Message	Description and Action
		the help for a list of the Management log files.
KAQM13042-E	An attempt to recover has failed because a system LU has not been saved.	Save information of the system LU may have been deleted. (O) Save the system LU.
KAQM13065-E	A timeout occurred during access of management information.	The system might be busy, or an error might have occurred in the cluster management LU. (O) Execute the same processing again after waiting. Acquire all the Management log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM13067-E	The uploaded file cannot be used.	The specified file is incorrect or might be damaged. (O) Check whether the specified file is correct.
KAQM13069-E	The operation could not be executed because the resource group is not running normally, or the resource group might be failing over.	The resource group is either in the Offline status, or it is failing over. (O) Make sure that the cluster, nodes, and resource groups are running normally, and then save the settings manually.
KAQM13071-E	The operation could not be executed because an attempt to save the OS disk has failed. (node= <i>name-of-the-node-in-which-an-error-occurred</i>)	There is not enough disk capacity to perform save processing, or an error occurred in the OS disk or in the cluster management LU of a node. (O) Acquire all the Management log files, delete any unnecessary log files, confirm that the system LU settings are correct and that there are no problems, and then retry the operation. If the error occurs again, contact maintenance personnel. See online Help for a list of the Management log files.
KAQM13072-E	The operation could not be executed because there is not enough space on the OS disk.	The free space of OS disk may be insufficient. (O) Delete unnecessary core files and log files, and then retry the operation. If the error occurs again, acquire all management log files, and then inform

Message ID	Message	Description and Action
		maintenance personnel. For a list of management log files, see the Help.
KAQM13073-E	The operation could not be executed because an attempt to create a download file failed. (node= <i>name-of-the-node-in-which-an-error-occurred</i>)	An error occurred in the OS disk or in the cluster management LU of a node. (O) Confirm that the system LU settings are correct and that there are no problems, and then retry execution. Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM13074-E	The operation could not be executed because the node cannot communicate.	Communication cannot be established with a node. (O) Check whether the interface settings or routing settings have affected the network settings of the Management LAN, make sure that the node has not stopped, and check for network errors. Also, the processing might not have completed because one of the nodes is heavily loaded. In this case, execute the same processing again after waiting. If the error still occurs, inform maintenance personnel.
KAQM13075-E	The operation could not be executed because the file is already uploaded.	A file is already uploaded. (O) Check the uploaded file. If necessary, delete the uploaded file, and then retry execution.
KAQM13076-E	The operation could not be executed because an attempt to save the cluster management LU failed.	An error occurred in the cluster management LU or in the OS disk.# (O) Confirm that the system LU settings are correct and that there are no problems, and then retry execution. Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files. #: In rare cases, this message might also be output when the system is busy.
KAQM13077-E	An attempt to upload a file failed.	The system may be busy, or a system error might have occurred. (O)

Message ID	Message	Description and Action
		Execute the same processing again after waiting. If the error occurs again, acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM13080-E	The operation could not be executed because a timeout occurred while saving the OS disk. (<i>node=name-of-the-node-in-which-an-error-occurred</i>)	The system might be busy, or an error occurred in the OS disk or in the cluster management LU of a node. (O) Execute the same processing again after waiting. If the error occurs again, acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM13081-E	The operation could not be executed because a timeout occurred while saving the cluster management LU.	The system might be busy, or an error occurred in the cluster management LU or in the OS disk. (O) Execute the same processing again after waiting. If the error occurs again, acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM13082-E	The specified file does not exist. (<i>file=name-of-the-specified-file-that-does-not-exist</i>)	The specified file has already been deleted, or has not been uploaded. (O) Check whether the specified file has been uploaded.
KAQM13083-E	An attempt to batch save the system settings has failed.	The system error might have occurred. (O) Confirm that the system LU settings are correct and that there are no problems, and then retry execution. Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM13084-E	An attempt to batch save and download the cluster management LU and both OS disks in this cluster has failed.	The Web browser settings might need to be changed, or a system error might have occurred. (O) Check the Web browser settings, check the system LU settings, make sure there are no problems, and then retry the operation. For details about

Message ID	Message	Description and Action
		the web browser settings, see the section that describes environment setup for a management console in the <i>Installation and Configuration Guide</i> . If the error occurs again, acquire all the Management log files, and then inform maintenance personnel. For a list of the Management log files, see online Help.
KAQM13085-E	An attempt to delete a file failed.	The system error might have occurred. (O) Confirm that the system LU settings are correct and that there are no problems, and then retry execution. Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM13086-E	An attempt to upload a file failed.	The specified file does not exist or the file is empty. (O) Check whether the specified file is correct.
KAQM13087-E	The operation could not be executed because an attempt to create a download file failed.	An error occurred in the OS disk. (O) Confirm that the system LU settings are correct and that there are no problems, and then retry execution. Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM13089-E	An attempt to read the management information has failed.	An error may have occurred in the virtual server OS disk. (O) Confirm that the system LU settings are correct, and then retry. If the error occurs again, download all the management log files and contact Product Support. For a list of management log files, see Help.
KAQM13090-E	A scheduled attempt to save settings was cancelled because an attempt to move to the destination directory failed.	The specified directory does not exist, or cannot be accessed by the specified user. (O) Confirm that the directory exists in the FTP server. If it does exist, make sure that the specified user can access it.

Message ID	Message	Description and Action
KAQM13091-E	A scheduled attempt to save settings was cancelled because an attempt to log in to the FTP server failed.	The user name or password is incorrect. (O) Confirm that the specified user is registered in the FTP server.
KAQM13092-E	An attempt to save the settings was cancelled because there is not enough space on the virtual server OS disk.	The virtual server OS disk may not have enough free space. (O) Delete selected core files and log files to create additional free space.
KAQM13093-E	A scheduled attempt to save the settings file was cancelled because there is not enough space on the virtual server OS disk.	The virtual server OS disk may not have enough free space. (O) Delete selected core files and log files to create additional free space.
KAQM13094-E	An attempt to save settings has failed.	The Web browser settings might need to be changed, or a system error might have occurred. (O) Check the Web browser settings, check the system LU settings, make sure there are no problems, and then retry the operation. For details about the web browser settings, see the section that describes environment setup for a management console in the <i>Installation and Configuration Guide</i> . If the error occurs again, acquire all the Management log files, and then inform maintenance personnel. For a list of the Management log files, see online Help.
KAQM13096-E	An attempt to set the scheduled period for saving settings has failed.	A system error might have occurred. (O) Confirm that the system LU settings are correct and that there are no problems, and then retry execution. If the error occurs again, acquire all management log files, and then inform maintenance personnel. For a list of management log files, see the Help.
KAQM13097-E	An attempt to upload the settings file was cancelled because there is not enough space on the virtual server OS disk.	The virtual server OS disk may not have enough free space. (O) Delete selected core files and log files to create additional free space.
KAQM13098-E	An attempt to upload a file failed.	A system error might have occurred. (O)

Message ID	Message	Description and Action
		Confirm that the system LU settings are correct and that there are no problems, and then retry execution. If the error occurs again, acquire all management log files, and then inform maintenance personnel. For a list of management log files, see the Help.
KAQM13099-E	An attempt to upload a settings file was cancelled because the version of the specified file is not supported. (version of the system where the settings file was created= <i>version-of-the-system</i>)	The specified settings file was created on a system with a newer version. (O) Specify a file with an appropriate version. For details on settings files that can be used for recovering settings, see the Help.
KAQM13100-E	An attempt to upload a settings file was cancelled because the specified setting file was acquired from a different virtual server. (ID of the virtual server from which the settings file was acquired= <i>ID-of-the-virtual-server</i>)	The specified settings file was acquired from a different virtual server. (O) Specify a settings file that was acquired from the same virtual server.
KAQM13101-E	An attempt to recover settings has failed.	A system error might have occurred. (O) Confirm that the system LU settings are correct and that there are no problems, and then retry execution. If the error occurs again, acquire all management log files, and then inform maintenance personnel. For a list of management log files, see the Help.
KAQM13102-I	Processing to recover settings will now start. (settings file= <i>settings-file-name</i> , acquisition date= <i>settings-file-acquisition-date</i>)	Recovery processing was executed. (O) No action is required.
KAQM13103-I	Processing to recover settings will now end.	Recovery processing ended. (O) No action is required.
KAQM13104-E	A scheduled attempt to save settings was cancelled because an attempt to connect to the FTP server failed.	The FTP server might not be operating normally, or a network error might have occurred. (O) Confirm that the FTP server is operating normally, and no network error has occurred. Also, the connection to the FTP server might not have been possible because the load

Message ID	Message	Description and Action
		on the node, FTP server, and network was high. After the load returns to normal (not high), save the settings manually.
KAQM13105-I	Processing to transfer a settings file has finished. (setting file= <i>settings-file-name</i>)	Processing to transfer a file to the FTP server finished. (O) No action is required.
KAQM13106-I	Communication with the FTP server will now start. (FTP server= <i>connection-target-FTP-server</i> , user name= <i>login-user-name</i>)	Communication with the FTP server will now start. (O) No action is required.
KAQM13107-I	Communication with the FTP server will now end. (result details= <i>detailed-processing-results</i>)	Communication with the FTP server ended. (O) No action is required.
KAQM13108-E	Processing was cancelled because an attempt to move to the destination directory failed.	The directory does not exist, or the directory cannot be accessed by the specified user. (O) Confirm that the directory is specified correctly. If the value is correct, confirm that the directory exists in the FTP server. If the directory exists, confirm that the directory can be accessed by the specified user.
KAQM13109-E	Processing was cancelled because an attempt to connect to the FTP server failed.	The FTP server might not be operating normally, or a network error might have occurred. (O) Confirm that the value as the FTP server is correct, the FTP server is operating normally, and no network error has occurred. Also, the connection to the FTP server might not have been possible because the load on the node, FTP server, and network was high. After the load returns to normal (not high), retry the operation.
KAQM13110-E	Processing was cancelled because an attempt to log in to the FTP server failed.	The user name or password is incorrect. (O) Confirm that the user name and password are specified correctly, and then retry the operation. If an error occurs again, confirm that the user is registered in the FTP server.

Message ID	Message	Description and Action
KAQM13111-E	A scheduled attempt to save settings has failed.	<p>Some of the resources to be used for processing are locked for use by another user, the locked node has stopped, or a system error might have occurred.</p> <p>(O)</p> <p>Change the time that settings are scheduled to be saved to a time when other scheduled jobs are not running. In addition, at times that settings are to be saved, do not execute commands or operate the GUI. If the node stopped during processing, wait about 15 minutes or boot the stopped node. If the error occurs again, acquire all management log files, and then inform maintenance personnel. For a list of management log files, see the Help.</p> <p>Details: See <i>G. Actions for When a Timeout Occurs due to the Inability to Secure the Resources Used for Processing</i>, and follow the procedure that is listed.</p>
KAQM13112-E	The specified delimiter character cannot be used because it is more than 1 character long.	<p>The specified delimiter character exceeds the maximum length.</p> <p>(O)</p> <p>Specify only 1 character for the delimiter character.</p>
KAQM13113-E	A timeout occurred while saving the settings file.	<p>The system might be busy, or an error might have occurred in the virtual server OS disk.</p> <p>(O)</p> <p>Wait, then try the operation again. If the error occurs again, confirm that the system LU settings are correct. If the problem cannot be resolved, download all the management log files and contact Product Support. For a list of management log files, see Help.</p>
KAQM13114-W	A timeout occurred during a scheduled attempt to save settings.	<p>The system might be busy.</p> <p>(O)</p> <p>No action is required.</p>
KAQM13115-E	All scheduled attempts, and retries, to save the settings file have failed.	<p>The system might be busy, or an error might have occurred in the virtual server OS disk.</p> <p>(O)</p> <p>Make sure the load on the server is normal, and save the settings file manually. If the error occurs again,</p>

Message ID	Message	Description and Action
		confirm that the system LU settings are correct. If the problem cannot be resolved, download all the management log files and contact Product Support. For a list of management log files, see Help.
KAQM13118-E	An attempt to transfer a settings file has failed.	A problem might have occurred during processing to transfer the file. (O) Make sure the FTP server is operating normally, no network errors have occurred, and files can be written to the directory of the FTP server. If the problem cannot be resolved, acquire all management log files, and then contact maintenance personnel. For a list of management log files, see the Help.
KAQM13119-E	An attempt to change the schedule for saving settings has failed.	A system error might have occurred. (O) Confirm that the system LU settings are correct and that there are no problems, and then retry execution. If the error occurs again, acquire all management log files, and then inform maintenance personnel. For a list of management log files, see the Help.
KAQM13120-W	Processing to recover settings finished normally. However, the recovered virtual server name is different from the name that is managed in the system. (recovered virtual server name= <i>recovered-virtual-server-name</i>)	The virtual server name might have changed after the settings file was saved. (O) Without rebooting virtual server, ask the system administrator to change the name of virtual server.
KAQM13121-E	Processing was canceled because the cluster management LU could not be accessed. (model name = <i>model-name</i> , serial number = <i>serial-number</i> , volume = <i>volume</i>)	The cluster management LU is not assigned to a node, the LU being used for the cluster management LU does not satisfy the conditions for the cluster management LU, or a system error might have occurred. (O) Check the status of the cluster management LU. If a system error has occurred, acquire all the Management log files, and then inform maintenance personnel. For a list of the Management log files, see the online Help.
KAQM13122-Q	Processing might take a while. Do you want to restore the OS disks by using the saved	This confirmation message is output before OS disks are restored. (O)

Message ID	Message	Description and Action
	settings (saved date and time = <i>date-and-time-data-was-saved</i>)? (y/n)	Enter y or n.
KAQM13123- Q	Processing might take a while. Do you want to restore the cluster management LU by using the saved settings (saved date and time = <i>date-and-time-data-was-saved</i>)? (y/n)	This confirmation message is output before the cluster management LU is restored. (O) Enter y or n.
KAQM13124-E	The specified management LAN IP address is invalid. (IP address = <i>specified-IP-address</i>)	The specified management LAN fixed IP address is invalid. (O) Specify a valid IP address.
KAQM13128-I	The settings were successfully saved. Transfer the settings file to an external location, and then erase the file stored in the system. (output file = <i>output-backup-file-name</i>)	The settings were successfully saved. (O) Transfer the settings file to an external location, and then erase the file stored in the system.
KAQM13129-E	An attempt to batch save the system settings and output files has failed.	The system error might have occurred. (O) Confirm that the system LU settings are correct and that there are no problems, and then retry execution. Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM13130-E	Processing was canceled because a new installation has not been performed for an OS.	A new installation has not been performed for an OS. (O) Perform a new installation of an OS by following error recovery procedures.
KAQM13131-I	The settings for the cluster management LU and both OS disks in the cluster have been restored, and the OSs in the cluster have been restarted. After restarting the OSs, define a cluster.	The settings were successfully restored. (O) After restarting the OSs, define a cluster.
KAQM13132-I	The cluster management LU has been restored, and the OSs in the cluster have been restarted. After restarting the OSs, define a cluster.	The cluster management LU was successfully restored. (O) After restarting the OSs, define a cluster.

Message ID	Message	Description and Action
KAQM13133-Q	Processing might take a while. Do you want to restore the system settings by using the specified file (saved date and time = <i>date-and-time-data-was-saved</i>)? (y/n)	This confirmation message is output before the system settings are restored. (O) Enter y or n.
KAQM13134-I	An OS disk has been restored, and an OS in the cluster has been restarted.	An OS disk was successfully restored. (O) After an OS has been restarted, failback the corresponding resource group.
KAQM13135-E	Processing was canceled because the settings are not present in the system.	The settings are not present in the system. (O) Restore the cluster management LU and both of the OS disks in the cluster by using the settings file.
KAQM13136-E	An attempt to recover the OS disk has failed.	A system error might have occurred. (O) Confirm that the system LU settings are correct and that there are no problems, and then retry the operation. If the error occurs again, acquire all of the log data, and then contact maintenance personnel. Maintenance personnel will acquire the OS logs by using the <code>oslogget</code> command, and then contact the Support Center.
KAQM13137-E	An attempt to restore the cluster management LU has failed. (failed process = <i>failed-process</i>)	A system error might have occurred. (O) Confirm that the system LU settings are correct and that there are no problems, and then retry the operation. If the error occurs again, acquire all of the log data, and then contact maintenance personnel. Maintenance personnel will acquire the OS logs by using the <code>oslogget</code> command, and then contact the Support Center.
KAQM13138-E	The OS disk could not be recovered because an attempt at synchronization between clusters has failed.	There might be a node that cannot establish communication, or the configuration might have been changed after the settings were saved. (O) Check whether the settings for the management port IP address are the same before and after the settings were saved, whether a node is

Message ID	Message	Description and Action
		stopped, and whether an error occurred on the network. If no problems are found, acquire all of the log data, and then contact maintenance personnel. Maintenance personnel will acquire the OS logs by using the <code>oslogget</code> command, and then contact the Support Center.
KAQM13139-E	A timeout occurred during the restoration of an OS disk.	The system might be busy, or an error might have occurred in the OS disk or in the cluster management LU. (O) Execute the same processing again after waiting. If the error occurs again, acquire all of the log data, and then contact maintenance personnel. Maintenance personnel will acquire the OS logs by using the <code>oslogget</code> command, and then contact the Support Center.
KAQM13140-E	A timeout occurred during the restoration of the cluster management LU.	The system might be busy, or an error might have occurred in the cluster management LU or in the OS disk. (O) Execute the same processing again after waiting. If the error occurs again, acquire all of the log data, and then contact maintenance personnel. Maintenance personnel will acquire the OS logs by using the <code>oslogget</code> command, and then contact the Support Center.
KAQM13141-W	The cluster management LU was successfully restored, but some of the settings could not be restored. As a result, the settings might have to be re-configured. (affected settings = <i>affected-settings</i>)	The cluster information might be corrupt. (O) Redefine the cluster, check the error information, and if necessary, re-configure the settings.
KAQM13142-E	The operation could not be performed because the restoration of an OS disk timed out.	The system might be busy, or an error occurred in the OS disk or in the cluster management LU of a node. (O) Execute the same processing again after waiting. If the error occurs again, acquire all of the log data, and then contact maintenance personnel. Maintenance personnel will acquire the OS logs by using the <code>oslogget</code> command, and then contact the Support Center.

Message ID	Message	Description and Action
KAQM13143-E	The operation could not be performed because the restoration of the cluster management LU timed out.	The system might be busy, or an error occurred in the cluster management LU or in the OS disk. (O) Execute the same processing again after waiting. If the error occurs again, acquire all of the log data, and then contact maintenance personnel. Maintenance personnel will acquire the OS logs by using the <code>oslogget</code> command, and then contact the Support Center.
KAQM13144-E	An attempt to restore system settings failed. (failed process = <i>failed-process</i>)	A system error might have occurred. (O) Confirm that the system LU settings are correct and that there are no problems, and then retry the operation. If the error occurs again, acquire all of the log data, and then contact maintenance personnel. Maintenance personnel will acquire the OS logs by using the <code>oslogget</code> command, and then contact the Support Center.
KAQM13145-E	Processing was canceled because there is already a settings file in the output directory.	There is a settings file in the output directory. (O) Transfer the settings file to an external location, erase the file stored in the system, and then retry the operation.
KAQM13147-E	The operation could not be performed because there is not enough free space in the output directory.	There might not be enough free space in the output directory. (O) Make sure that there is enough free space in the output directory.
KAQM13148-E	The file system that contains the specified directory (<i>output-directory</i>) is not mounted.	The file system that contains the specified directory is not mounted. (O) Mount the file system that contains the specified directory as read/write enabled. If the error occurs again, acquire all log data, and then contact maintenance personnel.
KAQM13149-E	The specified directory (<i>output-directory</i>) does not exist.	The specified directory does not exist. (O) Specify an existing directory.
KAQM13150-E	The file system that contains the specified directory	The file system that contains the specified directory is mounted as read-only.

Message ID	Message	Description and Action
	<i>(output-directory)</i> is mounted as read-only.	(O) Specify a directory in the file system mounted as read/write enabled, or remount the file system as read/write enabled. If the error occurs again, acquire all log data, and then contact maintenance personnel.
KAQM13151-E	The specified directory <i>(output-directory)</i> contains a relative path or symbolic link.	The specified directory contains a relative path or symbolic link. (O) Specify a directory using an absolute path and retry the operation. If the error occurs again, acquire all log data, and then contact maintenance personnel.
KAQM13152-E	The file system that contains the specified directory <i>(output-directory)</i> is blocked.	The file system containing the specified directory is blocked. (O) Contact maintenance personnel.
KAQM13153-E	There are no file systems that correspond to the specified directory <i>(output-directory)</i> .	There are no file systems that correspond to the specified directory. (O) In the list of file systems check the file system name, and then specify the right file system name.
KAQM13154-E	The specified directory <i>(output-directory)</i> cannot be used.	Only directories to which file sharing can be applied can be used. (O) Specify a directory to which file sharing can be applied.
KAQM13156-E	Processing was canceled because the specified settings file is not supported. (system version of the settings file = <i>version-of-system-from-which-settings-file-was-acquired</i>)	The settings file was created on a system of a newer version. (O) Specify a valid settings file. For details on settings files that can be used to recover settings information, see online Help.
KAQM13157-E	Processing was canceled because the specified settings file was acquired by a system with a different management LAN fixed IP address than the management LAN fixed IP address in the settings file. (management LAN IP address in the settings file = <i>management-LAN-fixed-IP-address-of-system-from-</i>	A settings file containing a different management LAN fixed IP address was specified. (O) If the management LAN fixed IP address is incorrect, specify the one in the settings file. If the settings file is invalid, specify a valid settings file.

Message ID	Message	Description and Action
	<i>which-settings-file-was-acquired)</i>	
KAQM13158-E	Processing was canceled because the specified IP address is invalid, or the IP address is different from the management LAN fixed IP address that is set for the active node and that is saved in the settings information.	The specified IP address is invalid, or the IP address is different from the management LAN fixed IP address that is set for the active node and that is saved in the settings information. (O) Confirm whether the specified IP address is valid. If the active node's management LAN fixed IP address is valid, change it to the one that is in the saved settings file.
KAQM13159-E	The contents of the specified schedule are invalid.	The contents of the specified schedule are invalid. (O) Make sure the specified values are correct, and then retry the operation.
KAQM13160-W	A timeout occurred while saving to the OS disk.	The system might be busy, or an error occurred in the OS disk or in the cluster management LU of a node. (O) No action is required.
KAQM13161-W	A timeout occurred while saving to the cluster management LU.	The system might be busy, or an error occurred in the cluster management LU or in the OS disk. (O) No action is required.
KAQM13162-E	All retries to perform a periodic save of setting information have failed.	The system might be busy, or an error occurred in the cluster management LU or in the OS disk. (O) Wait a while, and then save the settings manually. If the error occurs again, acquire all management log files, and then inform maintenance personnel. For a list of management log files, see the Help.
KAQM13164-W	The intervals for periodic saving were set successfully, but periodic saving is disabled.	The intervals for periodic saving were set, but periodic saving is disabled. (O) If you are saving periodically at set intervals, enable periodic saving.
KAQM13165-E	The file system cannot be used because the file system corresponding to the specified directory (<i>output-directory</i>) is	The file system cannot be used because the file system corresponding to the specified directory is defined by the other node in the cluster. (O)

Message ID	Message	Description and Action
	defined by the other node in the cluster.	Specify a directory that is defined by the current node, and then retry the operation.
KAQM13167-E	An internal error occurred.	A system error might have occurred. (O) Confirm that the system LU settings are correct and that there are no problems, and then retry the operation. If the error occurs again, acquire all of the log data, and then contact maintenance personnel. Maintenance personnel will acquire the OS logs by using the <code>oslogget</code> command, and then contact the Support Center.
KAQM13168-W	A scheduled attempt to save settings was cancelled because the resource group is not running normally, or the resource group might be failing over.	The resource group is either in the Offline status, or it is failing over. (O) Make sure that the cluster, nodes, and resource groups are running normally, and then save the settings manually.
KAQM13169-E	The operation could not be executed possibly because a resource group or a virtual server is not running normally.	The resource group or virtual server might be in the Offline status. (O) Make sure that the resource group or virtual server is running normally, and then save the settings manually.
KAQM13170-W	An error occurred during restoration of the file system. (file system = <i>file-system-name</i>)	An error occurred during restoration. (O) Take action as described in the message beginning with KAQM37 that was output just before this message.
KAQM13171-I	The settings for the cluster management LU and the OS disk have been restored, and the OS has been restarted.	The settings were successfully restored. (O) No action is required.
KAQM13173-E	Processing was canceled because the data of the specified settings file was acquired by a system with a different configuration.	The specified settings file was acquired by a system with a different configuration. (O) Specify a valid settings file. For details about settings files that can be used to recover settings information, see the online Help.
KAQM13175-W	A scheduled attempt to save settings was canceled because the resource group or virtual	The resource group or virtual server might be in the Offline status. (O)

Message ID	Message	Description and Action
	server might not be running normally.	Make sure that the resource group or virtual server is running normally, and then save the settings manually.
KAQM13176-E	An attempt to resolve the host name of HCP failed.	Name resolution was not executed properly. (O) Make sure that the host name can be resolved correctly on the network environment.
KAQM13177-E	An attempt to connect to HCP failed.	Specified HCP information might be incorrect, or there might be a problem with the HCP system or the network. (O) Revise the entered values and Configuration Wizard settings. After that, check the status of the HCP system and the network, fix the cause of the error, and then retry the operation. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM13178-E	A timeout occurred during communication with HCP.	There might be a problem with the HCP system or the network. (O) Check the status of the HCP system and the network, fix the cause of the error, and then retry the operation. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM13179-E	An attempt to establish SSL communication with HCP failed.	An attempt to establish SSL communication with HCP failed. (O) Check the settings of SSL on HCP and the status of the network, fix the cause of the error, and then retry the operation. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM13180-E	Communication with HCP failed.	An error occurred during communication with HCP. (O) Check the network status, and then try again. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM13181-E	Processing was canceled because an attempt was made to enable periodic saving on both nodes.	Periodic saving cannot be enabled on the node because the setting is already enabled on the other node, or

Message ID	Message	Description and Action
		<p>the setting on the other node cannot be acquired.</p> <p>(O)</p> <p>Confirm the periodic save settings on the other node. If you cannot check the status of the other node, make sure that the node has not stopped, and check for network errors, and then retry execution. If the error still occurs, inform maintenance personnel.</p>
KAQM13182-W	Periodic saving of the settings has been canceled because no license is set to allow linkage with an HCP system.	<p>Processing cannot be performed because a license is not set.</p> <p>(O)</p> <p>Please set a license.</p>
KAQM13183-E	No license is set to allow linkage with an HCP system.	<p>Processing cannot be performed because a license is not set.</p> <p>(O)</p> <p>Please set a license.</p>
KAQM13184-E	Authentication with the HCP system failed.	<p>The user name, password, tenant, namespace, or SSL setting is invalid.</p> <p>(O)</p> <p>Make sure that the entered values and settings are correct.</p>
KAQM13185-Q	Processing will take about <i>n</i> seconds. Do you want to restore system settings by using the saved file? (y/n)	<p>This confirmation message is output before the settings for the system are restored.</p> <p>(O)</p> <p>Enter y or n.</p>
KAQM13186-W	Processing to restore the system settings ended, but some of the settings could not be restored. Those settings might have to be re-set. Check the system messages, and then follow the instructions in the messages.	<p>In processing to restore the system settings, a problem occurred with some settings. For details, see the system message output between KAQM13201-I and KAQM13202-I.</p> <p>(O)</p> <p>Finish the error recovery procedure, check any system messages output between KAQM13201-I and KAQM13202-I, and follow the instructions in the messages.</p>
KAQM13187-E	No settings file that can be used for recovery exists.	<p>The specified system name or connection-destination HCP information is incorrect, or the specified file does not exist or the file is empty.</p> <p>(O)</p> <p>Check whether the specified system name and connection information for</p>

Message ID	Message	Description and Action
		the destination server is correct. If they are correct, check whether the target file exists on the destination server.
KAQM13188-E	The input value is invalid.	The input value is invalid. (O) Following the help information, specify a valid value.
KAQM13189-E	HCP system information for data access has not been set.	HCP system information for data access has not been set. (O) Set HCP system information for data access.
KAQM13190-E	An attempt to batch save the system settings and to transfer files has failed.	The HCP system or network might have a problem, or a system error might have occurred. (O) Make sure that the status of the HCP system and the network and the system LU settings are correct, and then retry the operation. If the problem persists, acquire all the Management log files, and then inform maintenance personnel. For a list of Management log files, see online Help.
KAQM13191-E	The server information for transfer of the system configuration information file has not been set.	The server information for transfer of the system configuration information file has not been set. (O) Set the server information for transfer of the system configuration information file.
KAQM13192-E	Processing has stopped because the specified settings file does not include settings for the node or virtual server to be restored.	The specified settings file does not include settings for the node or virtual server to be restored. (O) Specify a valid settings file. For details on settings files that can be used to recover settings information, see online Help.
KAQM13193-E	The operation could not be executed because the virtual server is not running normally.	The virtual server might be in the Offline status. (O) Make sure the virtual servers are operating normally.
KAQM13194-E	An attempt to batch save the system settings and download the file has failed.	The Web browser settings might need to be changed, or a system error might have occurred.

Message ID	Message	Description and Action
		<p>(O)</p> <p>Check the Web browser settings, check the system LU settings, make sure there are no problems, and then retry the operation. For details about the web browser settings, see the section that describes environment setup for a management console in the <i>Installation and Configuration Guide</i>. If the error occurs again, acquire all the Management log files, and then inform maintenance personnel. For a list of the Management log files, see online Help.</p>
KAQM13195-W	Batch save and download of the system setting information finished, but one or more virtual servers were not able to acquire setting information. (virtual server name = <i>virtual-server-name (message-id)</i>)	<p>Some of the resources to be used for processing are being used exclusively by another user, or the status of a virtual server does not allow execution.</p> <p>(O)</p> <p>Check the status of any virtual servers which were not able to acquire the setting information, and then save the setting information individually on each virtual server.</p> <p>Details:</p> <p>See <i>G. Actions for When a Timeout Occurs due to the Inability to Secure the Resources Used for Processing</i>, and follow the procedure that is listed.</p>
KAQM13196-W	The location for the scheduled saving of the default settings file may not be changed from the default value. If the setting information file is not saved, the system cannot be restored in the event of a problem.	<p>The location for the setting information file remains at the default value.</p> <p>(O)</p> <p>Modify the destination of the scheduled save operation. When the settings are at the default values, save the settings file to an external location, and then erase the settings file stored in the system.</p>
KAQM13197-E	The specified virtual server does not exist. (virtual server ID = <i>virtual-server-ID</i>)	<p>The specified virtual server does not exist.</p> <p>(O)</p> <p>Specify an existing virtual server ID, and then retry the operation.</p>
KAQM13198-E	The operation could not be executed because the virtual server is not operating normally or was not stopped properly.	<p>The virtual server might not have the Online or Offline status.</p> <p>(O)</p> <p>Make sure the virtual server is operating normally or has stopped, and then retry the operation.</p>

Message ID	Message	Description and Action
		Alternatively, save settings on the virtual server independently.
KAQM13199-E	The system settings have not been saved.	The system settings have never been saved. (O) Save the system settings.
KAQM13200-I	The settings were successfully restored. Restart the virtual server to complete restoration.	The settings were successfully restored. (O) Restart the virtual server to complete restoration.
KAQM13201-I	Processing to restore the system settings will now start.	Restoration processing was executed. (O) No action is required.
KAQM13202-I	Processing to restore the system settings will now end.	Restoration processing ended. (O) No action is required.
KAQM13211-Q	Do you want to set the data port? (y/n)	This confirmation message is output before setting a data port. (O) Enter y or n.
KAQM13212-E	The settings file to be used for the restoration could not be identified because multiple settings files exist on the tenant.	Multiple settings files exist on the tenant. (O) Specify the name of the system to be recovered, and then retry the operation.
KAQM13217-Q	Are you sure you want to initialize the system settings? (y/n)	This confirmation message is output before the system settings are initialized. (O) Enter y or n.
KAQM13219-E	The directory cannot be specified because it is in a file system for which content sharing is set to "On" (the namespace access type is set to read-only). (specified value = <i>directory-name</i>)	Directories in file systems for which content sharing is set to "On" cannot be specified. (O) Check the specified directory, and then retry the operation.
KAQM13220-E	The directory cannot be specified because it is in a file system for which home-directory roaming is enabled. (specified value = <i>directory-name</i>)	Directories in file systems for which home-directory roaming is enabled cannot be specified. (O) Check the specified directory, and then retry the operation.

Message ID	Message	Description and Action
KAQM13221-E	An attempt to save system settings was canceled because the local data encryption key is corrupted.	The local data encryption key is corrupted. (O) Acquire all the Management log files, and then contact maintenance personnel. See online Help for a list of the Management log files. After that, restore the system settings.
KAQM13222-E	The <code>-a</code> option and the <code>-n</code> option cannot be specified because the DHCP setting of the management port is enabled.	The DHCP setting of the management port is enabled. (O) Retry the operation without specifying the <code>-a</code> option or <code>-n</code> option.
KAQM13224-E	An attempt to set DHCP failed. (error message = <i>error-message</i>)	An attempt to set DHCP failed. (O) Take action according to the instructions for the error message.
KAQM13225-Q	Do you want to use DHCP to set the data port? (y/n)	This confirmation message is output before setting a data port. (O) Enter y or n.
KAQM13226-I	Select a number indicating the method for restoring files in the file system as stub files, and then press [Enter]. (1/2):	-
KAQM13227-I	Select a number indicating the speed for restoring stub files in the background, and then press [Enter]. (1/2/3):	-
KAQM13228-E	The public key for data encryption could not be decrypted because the entered key or passphrase is incorrect.	The entered key or passphrase is incorrect. (O) Enter a correct key or passphrase.
KAQM13229-E	The entered key is too short or too long. Make sure there is no line break in the entered key.	The entered key is too short or too long. Make sure there is no line break in the entered key. (O) Enter a correct key that does not include any line breaks.
KAQM13230-E	Failed to save the system settings information, either because version management is not enabled in the tenant or namespace settings, or because a conflict occurred with other HCP processing.	Version management might not be enabled in the tenant or namespace settings, or a conflict might have occurred with other HCP processing. (O)

Message ID	Message	Description and Action
		Ask the HCP administrator to enable version management, and then try again.
KAQM13231-E	Processing to periodically save the system configuration information to the system LU failed.	A system error might have occurred, or a failure might have occurred in the operating system disk or in the cluster management LU. (O) Follow the instructions in the messages KAQM13nnn or KAQM14nnn that follow this message to resolve the cause of the error, and then save the system configuration information.
KAQM13232-W	Processing to periodically save the system configuration information to the home directory for the SSH account failed.	Free space in the home directory for the SSH account might be insufficient. (O) Delete unnecessary files in the home directory (/home/nasroot/) for the SSH account. To recover the system configuration information, check the periodic save schedule, and then use the latest system configuration information file. Note: Delete unnecessary files by using the <code>rmfile</code> command.
KAQM13233-E	Processing to periodically save the system configuration information to the home directory for the SSH account failed.	An attempt to create a system configuration information file might have failed, or free space in the home directory for the SSH account might be insufficient. (O) Follow the instructions in the messages KAQM13nnn or KAQM14nnn that follow this message to resolve the cause of the error, and then save the system configuration information.

KAQM14 messages

This section explains messages that have a message ID beginning with KAQM14, and the actions to be taken if such messages appear.

Table 5-10 KAQM14 messages

Message ID	Message	Description and Action
KAQM14001-E	No such file or directory exists. (file name or directory name= <i>file-name-or-directory-name</i>)	The file or the directory shown in (file name or directory name) does not exist. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM14002-E	An attempt to open the file failed. (file name= <i>file-name</i> , error details= <i>error-details</i>)	The opening of the file (file name) failed because of the reasons shown in (error details). (O) Take action according to the (error details). Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM14003-E	An attempt to copy a file failed. (source file= <i>source-file-name</i> , destination file= <i>destination-file-name</i> , error details= <i>error-details</i>)	The file copying from (source file) to (destination file) failed because of the reasons shown in (error details). (O) Take action according to the (error details). Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM14004-E	An attempt to read a file failed. (file name= <i>file-name</i> , error details= <i>error-details</i>)	The file reading of (file name) failed because of the reasons shown in (error details). (O) Take action according to the (error details). Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM14008-E	An attempt to acquire the file information failed. (file name= <i>file-name</i> , error details= <i>error-details</i>)	The acquisition of the file information on (file name) failed because of the reasons shown in (error details). (O) Take action according to the (error details). Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.

Message ID	Message	Description and Action
KAQM14009-E	An attempt to restore the file information failed. (file name= <i>file-name</i>)	In order to read the contents of the file, an attempt was made to return the temporarily changed file information of (file name) to the original; however, the attempt failed. (O) Execute the same processing again. Acquire all the Management log files, and inform maintenance personnel if the error occurs when you execute again. See the help for a list of the Management log files.
KAQM14010-E	A time-out occurred in the file locking. (file name= <i>file-name</i>)	A time-out occurred in the standby processing for the release of the lock on (file name). (O) Execute the same processing again after waiting. Acquire all the Management log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM14011-E	An attempt to lock a file failed. (file name= <i>file-name</i> , error details= <i>error-details</i>)	The file locking of (file name) failed because of the reasons shown in (error details). (O) Execute the same processing again after waiting. Acquire all the Management log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM14013-E	An attempt to create a temporary file in the directory failed. (directory name= <i>directory-name</i> , error details= <i>error-details</i>)	An attempt to make a temporary file for (directory name) failed because of the reason shown in (error details). (O) Execute the same processing again after waiting. Acquire all the Management log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM14050-E	An attempt to create the directory for the temporary file failed. (directory name= <i>directory-name</i>)	An attempt was made to create the directory for the temporary file because none existed, but the attempt failed. (O)

Message ID	Message	Description and Action
		Acquire all the Management log files, and then contact maintenance personnel. See the help for a list of the Management log files.
KAQM14051-E	An attempt to change the directory access mode for the temporary file failed. (directory name= <i>directory-name</i>)	An attempt to change the directory access mode for the temporary file failed. (O) Acquire all the Management log files, and then contact maintenance personnel. See the help for a list of the Management log files.
KAQM14087-E	An attempt to change the owner group of a file failed. (file name= <i>file-name</i> , error details= <i>error-details</i>)	The changing of the file owner group failed because of the reasons shown in (error details). (O) Acquire all the Management log files, and then contact maintenance personnel. See the help for a list of the Management log files.
KAQM14088-E	An unexpected error occurred when the owner group of the file was changed. (file name= <i>file-name</i>)	An attempt was made to change the file owner group but an unexpected error occurred. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM14101-E	In the cluster, nodes that cannot synchronize exist.	A problem exists in the communication processing between nodes. (O) The LAN cable might have been disconnected. Make sure that the LAN cable is connected. Also, the synchronization processing might not have completed because one of the nodes is heavily loaded. In this case, make sure that the state of the node changes to normal (that is, not heavily loaded), and then retry the operation. If the error occurs again, inform maintenance personnel.
KAQM14105-E	Some of the resources to be used for the requested processing are being used by another user.	Some of the resources to be used for processing are being used exclusively by another user, or the node being used exclusively has stopped. (O) Wait a while, and then execute again. If the node stops during processing,

Message ID	Message	Description and Action
		wait about 15 minutes or boot the stopped node. Details: See G. <i>Actions for When a Timeout Occurs due to the Inability to Secure the Resources Used for Processing</i> , and follow the procedure that is listed.
KAQM14112-I	Automatic deletion of the temporary file was started.	Automatic deletion of the temporary file was started. (O) No action is required.
KAQM14113-I	Automatic deletion of the temporary file was completed.	Automatic deletion of the temporary file was completed. (O) No action is required.
KAQM14114-W	An attempt to automatically remove the temporary file failed. (file name= <i>file-name</i> , error details= <i>error-details</i>)	The automatic deletion of a temporary file failed because of the reasons shown in (error details). (O) No action is required because a temporary file that fails to be deleted will be deleted by the next automatic deletion. Acquire all the Management log files if this error occurs frequently, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM14117-E	The line feed code in the text file is invalid. (file name= <i>file-name</i>)	An invalid line feed code is included in the text file shown in (file name). (O) Execute the same processing again after changing the line feed code of the text file shown in (file name) to the Unix format (LF). Acquire all the Management log files if the error occurs even after the change, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM14119-E	An attempt to change the file access permission failed. (file name= <i>file-name</i> , error details= <i>error-details</i>)	The changing of the file access permission failed because of the reasons shown in (error details). (O) Acquire all the Management log files, and then contact maintenance personnel. See the help for a list of the Management log files.

Message ID	Message	Description and Action
KAQM14120-E	An unexpected error occurred during the changing of the file access permission. (file name= <i>file-name</i>)	An attempt was made to start changing the file access permission but an unexpected error occurred. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM14121-E	An unexpected error occurred during the acquiring of the file information. (file name= <i>file-name</i>)	An attempt was made to acquire the file information but an unexpected error occurred. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM14123-E	An error occurred in the system.	The reading of the system file may have failed. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM14124-E	An error occurred in the system.	A problem may exist in the processing of the system file. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM14129-E	The operation could not be performed because access to the Cluster Management LU is being suppressed.	The OS might not have finished starting. If the OS is running, one of the following might apply: An error occurred in the Cluster Management LU or in a system file; the Cluster Management LU is blocked; or access to the Cluster Management LU is being suppressed because a resource group was forcibly failed over. (O) If the OS has not finished starting, wait a few minutes, and then retry the operation. If this message is repeated, contact maintenance personnel.
KAQM14130-E	An error occurred in the system.	A problem may exist in the processing of the system file. (O) Inform maintenance personnel.

Message ID	Message	Description and Action
KAQM14131-E	A syntax error exists in the parameter (<i>parameter</i>).	A syntax error exists in the specified parameter. (O) Specify valid syntax according to the help.
KAQM14132-E	No license is set to allow use of basic functionality.	No license is set to allow use of basic functionality. (O) Please set a license.
KAQM14133-E	The command cannot be used because a cluster configuration or system management IP address is not defined.	In the case of a cluster configuration, a cluster configuration is not defined. In the case of a single node configuration, a system management IP address is not defined. (O) In the case of a cluster configuration, define the cluster configuration first. In the case of a single node configuration, define the system management IP address first.
KAQM14134-E	An error occurred in the shared processing of commands. (Error= <i>error</i>)	An error occurred in the shared processing of commands. (O) Acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files.
KAQM14135-I	The signal (<i>signal-number</i>) was caught.	The signal (<i>signal-number</i>) was caught. (O) None.
KAQM14136-I	Usage: <i>command-syntax</i>	This message displays the format of the command. (O) If a syntax error occurs, check the format of the command, and then retry.
KAQM14137-E	A name not registered in the system was specified for the argument of an option (<i>option</i>) (<i>name=name</i>).	The specified name might not be registered in the system or be able to be used in the system. Alternatively, if a directory server is being used, connection to the server might not have been possible. (O) If you are using a directory server, make sure that connection to the server is possible. If you are not using a directory server, or if connection to

Message ID	Message	Description and Action
		the directory server is possible, make sure the specified name is registered in the system and that it can be used in the system, and then try again.
KAQM14138-E	There are too many or too few parameters.	There are too many or too few parameters. (O) Check the format of the command, and retry specifying a suitable parameter.
KAQM14139-E	A name already registered in the system was specified for the argument of an option (<i>option</i>) (<i>name=name</i>).	A name already registered in the system was specified for the argument of an option (<i>option</i>). (O) Check the name and retry.
KAQM14140-E	A name not registered in the system is specified in a parameter. (<i>name = name</i>)	A name not registered in the system is specified in a parameter. (O) In the parameter, specify a name registered in the system.
KAQM14141-E	An error occurred in the file system or in the device files that make up the differential-data storage device.	An error occurred in a device file that makes up the file system or the different-data storage device. This message might be output during processing when a failover occurs or a resource group is in the Offline state, or a virtual server is not operating normally. (O) Make sure that the resource group or virtual server is in the Online state, and then retry the operation. If it is in the Online state and you cannot resolve the problem, contact maintenance personnel.
KAQM14144-E	The specified operation cannot be performed.	The total amount of processing accumulated on the system has reached the upper limit. (O) Wait a while, and then try again. If the error occurs repeatedly, acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files.
KAQM14145-E	The specified operation cannot be performed.	A failover might have occurred or the resource group might be in the Offline state. (O) If a failover occurred, perform a failback, and then try again. If the

Message ID	Message	Description and Action
		resource group is in the Offline state, change it to the Online state, and then try again. If the resource group is running normally, acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files.
KAQM14147-E	The specified operation cannot be performed.	Processing might be temporarily unavailable. (O) Wait for about five minutes, and then try again. If the error occurs repeatedly, acquire all the Management log files and inform maintenance personnel. See the help for a list of the Management log files.
KAQM14148-E	An argument of the specified option (<i>option</i>) cannot be changed because the changed argument will conflict with the state registered in the system.	An argument of the specified option (<i>option</i>) cannot be changed because the changed argument will conflict with the state registered in the system. (O) Specify an argument that does not conflict with the state registered in the system, and then retry the operation.
KAQM14149-E	An attempt to acquire information to identify the storage system failed.	The OS disk or virtual server OS LU might not have enough free space, or the system might be heavily loaded. (O) Wait a while, and then retry. If the error occurs again, inform maintenance personnel.
KAQM14150-E	An error occurred in the system.	An error occurred in the processing to determine the execution environment. (O) Acquire all the Management log files and inform maintenance personnel. If you cannot acquire a log, give the message ID to maintenance personnel. See the help for a list of the Management log files.
KAQM14151-E	This operation cannot be performed on the node.	This operation cannot be performed on the node. (O) Perform this operation on the virtual server.
KAQM14152-E	This operation cannot be performed on the virtual server.	This operation cannot be performed on the virtual server. (O) Perform this operation on the node.

Message ID	Message	Description and Action
KAQM14153-E	Processing is not possible because there is a problem in the system communication processing.	A problem exists in the system communication processing. (O) Inform the system administrator of the following information: Message ID: KAQM14153-E, Action: The LAN cable might have been disconnected. Make sure that the LAN cable is connected. Also, the synchronization processing might not have completed because one of the nodes in the cluster is heavily loaded. In this case, make sure that the state of the node changes to normal (that is, not heavily loaded). If this error occurs again, inform maintenance personnel.
KAQM14154-E	Editing of user information failed.	A conflict with another operator or an internal error might have occurred. (O) Wait a while, and then retry the operation. If this error occurs again, inform the system administrator of the following information: Message ID: KAQM14154-E, Action: If the node has stopped, start it.
KAQM14155-E	The value " <i>duplicated-value</i> " is duplicated.	The specified value is duplicated. (O) Remove the duplicated value, and then retry the operation.
KAQM14156-E	An argument specified for the option " <i>option-whose-argument-is-specified-incorrectly</i> " is invalid.	The argument specified for the indicated option is invalid. (O) Specify a valid value as described in Help.
KAQM14157-E	The specified parameter " <i>parameter-name</i> " cannot be used because it exceeds <i>maximum-length</i> characters. (specified value = <i>specified-value</i>)	The specified parameter exceeds the maximum length. (O) Specify the parameter so that it does not exceed the maximum length.
KAQM14158-E	The specified parameter " <i>parameter-name</i> " includes an invalid character. (specified value = <i>specified-value</i>)	An invalid character was specified, or a character that cannot be used at the beginning or end of the parameter was specified. (O) Specify only usable characters, and then retry the operation.

Message ID	Message	Description and Action
KAQM14159-E	The argument specified for the option " <i>option-name</i> " is not a numeric value or is outside the valid range.	The argument specified for the indicated option is not numeric, is a numeric value that starts with "0", or is outside the valid range. (O) Specify a valid value as described in Help.
KAQM14160-E	The specified file name includes an invalid character or exceeds the maximum length. (file name = <i>specified-file-name</i>)	The specified file name includes an invalid character or exceeds the maximum length. (O) Specify a valid file name, and then retry the operation.
KAQM14161-E	A timeout occurred during the resource operation.	The system might be in a high load state, or another resource operation might be executing. (O) Check the status of the node or virtual server, wait a while, and then try again. If this message is output repeatedly, acquire all management log files, and then contact maintenance personnel.
KAQM14162-E	No license is set to allow import of data from another file server.	Processing cannot be performed because a license is not set. (O) Set the license, restart the resource groups or the virtual server, and then try again.
KAQM14163-E	The home directory might not have enough space.	The home directory might not have enough space. (O) Delete any unnecessary files in the home directory (<i>/home/nasroot/</i>) of the SSH account, and then retry the operation. If the error occurs again, acquire all the Management log files, and then contact maintenance personnel. For a list of the Management log files, see Help. Note: Delete unnecessary files by using the <code>rmfile</code> command.
KAQM14164-E	A file with the same name as the specified file already exists in the home directory. (file name = <i>file-name</i>)	A file with the same name as the specified file already exists in the home directory. (O)

Message ID	Message	Description and Action
		Specify the name of a file that does not exist in the home directory.
KAQM14165-E	The specified file does not exist in the home directory. (file name = <i>file-name</i>)	The specified file does not exist in the home directory. (O) Confirm whether the specified file exists in the home directory.
KAQM14166-E	The specified file is not a regular file, or contains a relative path or symbolic link. (specified value = <i>file-name</i>)	The specified file is not a regular file, or contains a relative path or symbolic link. (O) Specify a file name that does not contain a relative path or symbolic link. Also, you cannot specify a directory.
KAQM14167-W	MegaCLI, which is required to acquire internal hard disk and battery information, is not installed.	MegaCLI, which is required to acquire internal hard disk and battery information, is not installed. (O) Install MegaCLI, and then retry the operation.
KAQM14170-E	A system error occurred.	There might be a problem in internal processing. (O) Contact maintenance personnel.
KAQM14172-E	The specified path includes a directory that is used by the system. (directory used by system = <i>directory-path</i>)	You cannot perform the operation on a path that contains a directory that is used by the system. (O) Specify a path that does not include a system directory, and then retry the operation.
KAQM14173-E	The format of the specified IP address is invalid.(specified value = <i>IP-address</i>)	The format of the specified IP address is invalid. (O) Check the specified value, and retry the operation.
KAQM14174-E	The specified IP address cannot be set.(specified value = <i>IP-address</i>)	The specified IP address is a special address that cannot be set. (O) Check the specified value, and retry the operation.
KAQM14176-E	No backup folder (<i>Backup-folder-name</i>) exists for the specified virtual machine folder.	No backup folder exists for the specified virtual machine folder. (O)

Message ID	Message	Description and Action
		Make sure that the backup folder exists for the specified virtual machine folder, and then retry the operation.
KAQM14177-E	Command execution failed. (command = <i>command</i> , error details = <i>error-details</i>)	Command execution failed due to the reasons shown in the error details. (O) Take action according to the error details. Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See online Help for a list of the Management log files.
KAQM14178-E	This operation cannot be performed in the current system configuration.	This operation cannot be performed in the current system configuration. (O) None.
KAQM14179-W	Processing to start the OS is not complete. Wait several minutes, and then log in again.	Normal operation might not be possible because processing to start the OS is not complete. (O) Wait several minutes, and then log in again. Make sure that this message is not displayed, and then perform operations as normal. If this message is displayed repeatedly, acquire all the management log files, and then contact maintenance personnel.
KAQM14180-E	The encryption function for saving, sending, or receiving user data cannot be used.	The encryption function for saving, sending, or receiving user data cannot be used. (O) None.

KAQM15 messages

This section explains messages that have a message ID beginning with KAQM15, and the actions to be taken if such messages appear.

Table 5-11 KAQM15 messages

Message ID	Message	Description and Action
KAQM15003-I	The session has become invalid.	Your session might have expired. (O) Log in again.
KAQM15005-E	The user ID is not entered.	The user ID is not entered. (O)

Message ID	Message	Description and Action
		Enter the user ID.
KAQM15006-E	An internal error occurred. (error details= <i>detailed-information-1, detailed-information-2</i>)	The processing results were unexpected. (O) Log in again. If the error occurs again, contact the system administrator. The system administrator will acquire all the Management log files, and then contact maintenance personnel. See Help for a list of the Management log files.
KAQM15007-W	The logged in time is unknown. (<i>session-file-name</i>)	Session information may have been deleted. (O) No action is required.
KAQM15008-I	<i>user-name</i> logged in. (account type= <i>account-type</i> , client= <i>client-Internet-Protocol-address</i>)	The user logged in. (O) No action is required.
KAQM15009-I	<i>user-ID</i> logged out. (account type= <i>account-type</i> , client= <i>client-Internet-Protocol-address</i>)	The user logged out. (O) No action is required.
KAQM15010-I	<i>user-name</i> logged in by using a forced login. (account type= <i>account-type</i> , client= <i>client-Internet-Protocol-address</i>)	The user was logged in by using a forced login. (O) No action is required.
KAQM15012-I	The <i>user-ID</i> session timed out. (account type= <i>account-type</i>)	This session has expired because no operation took place for an extended period of time. (O) Log in again.
KAQM15013-I	This account has expired. (<i>user-ID</i>)	The user took too long to log in to this account. (O) Execute the operation again.
KAQM15014-E	<i>user-ID</i> failed the password authentication. (account type= <i>account-type</i> , client= <i>client-Internet-Protocol-address</i>)	An error exists in the user ID or password. (O) Confirm that the password and user ID are correct, and log in again.
KAQM15015-I	The license for this function is not set.	The license for this function is not set. (O) Set the license for this function.

Message ID	Message	Description and Action
KAQM15016-E	The window cannot be displayed.	The web browser settings might be inappropriate, processing might be temporarily unavailable, or a NAS OS LU or virtual server OS LU might not have enough space. (O) Make sure the web browser settings are correct, and then try again. For details about the web browser settings, see the section that describes environment setup for a management console in the <i>Installation and Configuration Guide</i> . If the error occurs again, contact the system administrator. The system administrator will contact maintenance personnel.
KAQM15017-I	This function is not installed.	This function is not installed. (O) Install this function.
KAQM15018-E	This function cannot be used.	The license for this function is not set. (O) Set the license for this function.
KAQM15019-E	This function cannot be used.	This function is not installed. (O) Install this function.
KAQM15020-E	An internal error occurred.	Other users might be occupying some of the resources used for the processing, or a system error might have occurred. (O) Wait a while, and then retry the operation. If the error occurs again, contact the system administrator. The system administrator will acquire all the Management log files, and then contact maintenance personnel. See Help for a list of the Management log files.
KAQM15021-E	An attempt to display the window failed.	An internal error occurred. (O) Wait a while, and then retry the operation. If the error occurs again, contact the system administrator. The system administrator will contact maintenance personnel.
KAQM15022-E	An attempt to acquire a license failed.	The OS disk or virtual server OS LU might not have enough space, or a system error might have occurred.

Message ID	Message	Description and Action
		(O) Wait a while, and then retry the operation. If the error occurs again, contact the system administrator. The system administrator will contact maintenance personnel.
KAQM15023-E	An error occurred in the cluster management LU or a system file.	An error occurred in the cluster management LU or a system file, or the cluster management LU is blocked. (O) Contact the system administrator. The system administrator will contact maintenance personnel.
KAQM15024-E	Other users might be occupying some of the resources used for the processing.	Other users might be using some of the resources used for the processing, or the node or virtual server might have stopped. (O) Wait a while, and then retry the operation. If the error occurs again, contact the system administrator. If the node or virtual server has stopped, the system administrator will start the node or virtual server. If the node or virtual server cannot be started or the error occurs again, the system administrator will contact maintenance personnel.
KAQM15026-E	The Device Manager version being used cannot start the File Services Manager window for the operation.	The Device Manager version being used cannot start the File Services Manager window for the operation. (O) Please install Device Manager version 5.6 or later.
KAQM15027-E	More windows cannot be displayed.	An attempt was made to open more than the maximum number of displayable Edit Quota windows. (O) Close any unnecessary Edit Quota windows by clicking the Close button, and then try again. If the error occurs again, close all displayed Web browser windows and then try again.
KAQM15028-E	The window cannot be displayed.	The cluster configuration has not been defined. (O) Click the Cluster Management button and define the cluster configuration, and then try again.

Message ID	Message	Description and Action
KAQM15029-E	No license is set to allow use of basic functionality.	No license is set to allow use of basic functionality. (O) Please set a license.
KAQM15030-E	No license is set to allow use of basic functionality.	No license is set to allow use of basic functionality. (O) Please set a license.
KAQM15031-E	No license is set to allow use of basic functionality.	No license is set to allow use of basic functionality. (O) Please set a license.
KAQM15032-W	The session is no longer valid, or a system error occurred.	The session might be unable to continue (for example, due to an interrupt), or there might be a problem in the processing of a system file. (O) Close the window, and then confirm that setup is complete. If setup is not complete, retry the operation, as necessary. If the problem persists, acquire all the Management log files, and then inform maintenance personnel. For a list of Management log files, see online Help.

KAQM16 messages

This section explains messages that have a message ID beginning with KAQM16, and the actions to be taken if such messages appear.

Table 5-12 KAQM16 messages

Message ID	Message	Description and Action
KAQM16001-E	No system file or directory.	A problem might exist in the processing of the OS disk, virtual server OS LU, or system file. (O) Check the settings and whether a problem exists on the OS disk or virtual server OS LU. If you cannot resolve the problem, acquire all the Management log files, and then contact maintenance personnel. See Help for a list of the Management log files.

Message ID	Message	Description and Action
KAQM16002-E	An attempt to open the system file failed.	<p>There might be a conflict with another system administrator's operation, or a problem might exist in the processing of the OS disk, virtual server OS LU, or system file.</p> <p>(O)</p> <p>Retry the operation. If this error occurs again, check the settings and whether a problem exists on the OS disk or virtual server OS LU. If you cannot resolve the problem, acquire all the Management log files, and then contact maintenance personnel. See Help for a list of the Management log files.</p>
KAQM16003-E	An attempt to write to the system file failed.	<p>A problem might exist in the processing of the OS disk, virtual server OS LU, or system file.</p> <p>(O)</p> <p>Check the settings and whether a problem exists on the OS disk or virtual server OS LU. If you cannot resolve the problem, acquire all the Management log files, and then contact maintenance personnel. See Help for a list of the Management log files.</p>
KAQM16004-E	The service is not selected.	<p>An attempt was made to execute without selecting a service.</p> <p>(O)</p> <p>Select a service from the list of services, and then retry execution.</p>
KAQM16005-E	The specified service does not support changing the service configuration.	<p>The selected service cannot change its configuration.</p> <p>(O)</p> <p>Select another service.</p>
KAQM16006-E	The specified service does not support stop/start/restart.	<p>The SSH service cannot control stop/start/restart.</p> <p>(O)</p> <p>Select another service.</p>
KAQM16007-E	An attempt to stop the specified service failed.	<p>A problem may exist in the processing of the system file or service.</p> <p>(O)</p> <p>Retry execution. Acquire all the Management log files if execution fails, and inform maintenance personnel. See the help for a list of the Management log files.</p>

Message ID	Message	Description and Action
KAQM16008-E	An attempt to start the specified service failed.	The virtual IP address might not be specified, or there might be a problem in the processing of a system file or service. (O) Check the virtual IP address again, and then retry execution. If a virtual IP address is not specified, specify at least one. If execution still fails, acquire all the management log files, and then contact maintenance personnel. See online Help for a list of the management log files.
KAQM16009-E	The entered 'Percentage of buffer cache dirty to activate bdflush' is not within the valid range (0 to 100).	Enter a value from 0 to 100 for 'Percentage of buffer cache dirty to activate bdflush'. (O) Check the entered data, and enter again.
KAQM16010-E	The entered 'Jiffies delay between kupdate flushes' is not within the valid range (1 to 1,000,000).	Enter a value from 1 to 1,000,000 for 'Jiffies delay between kupdate flushes'. (O) Check the entered data, and enter again.
KAQM16011-E	The entered 'Time for normal buffer to age before we flush it' data is not within the valid range (100 to 600,000).	Enter a value from 100 to 600,000 for 'Time for normal buffer to age before we flush it'. (O) Check the entered data, and enter again.
KAQM16012-E	The entered 'Percentage of buffer cache dirty to activate bdflush synchronously' data is not within the valid range (0 to 100).	Enter a value from 0 to 100 for 'Percentage of buffer cache dirty to activate bdflush synchronously'. (O) Check the entered data, and enter again.
KAQM16013-E	The entered 'Maximum readahead page count' data is not within the valid range (0 to 1,024).	Enter a value from 0 to 1,024 for 'Maximum readahead page count'. (O) Check the entered data, and enter again.
KAQM16014-E	The entered 'Minimum readahead page count' data is not within the valid range (0 to 1,024).	Enter a value from 0 to 1,024 for 'Minimum readahead page count'. (O) Check the entered data, and enter again.

Message ID	Message	Description and Action
KAQM16017-E	The entered 'Upper limit of i-node hash table size on a file system' data is not within the valid range (128 to 10,240).	Enter a value from 128 to 10,240 for 'Upper limit of i-node hash table size on a file system'. (O) Check the entered data, and enter again.
KAQM16018-E	The entered 'Time for buffer to age before we flush it' data is not within the valid range (100 to 30,000).	Enter a value from 100 to 30,000 for 'Time for buffer to age before we flush it'. (O) Check the entered data, and enter again.
KAQM16019-E	The entered 'Interval between runs of the delayed write flush daemon' data is not within the valid range (50 to 3,000).	Enter a value from 50 to 3,000 for 'Interval between runs of the delayed write flush daemon'. (O) Check the entered data, and enter again.
KAQM16021-E	The entered 'Number of nfsd processes' data is not within the valid range (1 to 2048).	Enter a value from 1 to 2048 for 'Number of nfsd processes'. (O) Check the entered data, and enter again.
KAQM16022-E	The entered 'nfsd buffer size' data is not within the valid range (8 to 1024).	Enter a value from 8 to 1024 for 'nfsd buffer size'. (O) Check the entered data, and enter again.
KAQM16023-E	An attempt to restart the specified service failed.	The virtual IP address might not be specified, or there might be a problem in the processing of a system file or service. (O) Check the virtual IP address again, and then retry execution. If a virtual IP address is not specified, specify at least one. If execution still fails, acquire all the management log files, and then contact maintenance personnel. See online Help for a list of the management log files.
KAQM16024-E	An attempt to modify the specified service configuration failed.	A problem may exist in the processing of the system file or service. (O) Retry execution. Acquire all the Management log files if execution fails, and inform maintenance personnel.

Message ID	Message	Description and Action
		See the help for a list of the Management log files.
KAQM16025-E	The specified 'Minimum readahead page count' value is larger than the 'Maximum readahead page count'.	A 'Minimum readahead page count' larger than the 'Maximum readahead page count' value cannot be specified. (O) Check the entered data, and enter again.
KAQM16033-E	A format other than OpenSSH was specified for the public key file.	The specified file does not exist, or the file is empty or corrupted. The specified file might be in a format other than OpenSSH. (O) Enter the name of a valid public key file that is in OpenSSH format, and then retry the operation.
KAQM16034-E	The 'Comment' has not been set.	No comment exists in the 'Comment' field. (O) Enter the 'Comment' and execute the operation again.
KAQM16035-E	An attempt to delete the public key failed.	A problem may have occurred during processing of the system file or the deletion of the public key. (O) Retry execution. Acquire all the Management log files if you still cannot execute the operation, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM16036-E	An attempt to add the public key failed.	The home directory for the SSH account (/home/nasroot/) might not have enough space, or a problem might have occurred while processing a system file or adding a public key. (O) Delete any unnecessary files in the home directory for the SSH account (/home/nasroot/), and then retry the operation. If the error continues to occur, acquire all Management log files, and inform maintenance personnel. See the help for a list of the Management log files. Note: Delete unnecessary files by using the <code>rmfile</code> command.

Message ID	Message	Description and Action
KAQM16039-E	The 'Public Key' is not selected.	An attempt was made to execute without selecting a 'Public Key'. (O) Select the 'Public Key' from the 'Public Key List', and then retry.
KAQM16040-E	The entered 'Client time-out' data is outside the valid range (0 to 1,440).	Enter a value from 0 to 1,440 for 'Client time-out'. (O) Check the entered data, and enter again.
KAQM16041-E	An attempt to execute the command (<i>command-that-caused-an-error</i>) failed.	An attempt to execute the command (<i>command-that-caused-an-error</i>) has failed. The home directory for the SSH account might not have enough space. (O) Delete any unnecessary files in the home directory for the SSH account, and then retry the operation. If the error occurs again, acquire all the Management log files, and then inform maintenance personnel. Maintenance personnel will acquire the OS logs by using the <code>oslogget</code> command, and then contact the Support Center. Note: Delete unnecessary files by using the <code>rmfile</code> command.
KAQM16042-E	An attempt to access the system file (<code>CIFS.conf</code>) failed.	Exclusive access to the system file (<code>CIFS.conf</code>) could not be set. (O) Execute the same processing again after waiting. Acquire all the Management log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM16043-E	An attempt to release the exclusive access to the system file (<code>CIFS.conf</code>) failed.	Exclusive access to the system file (<code>CIFS.conf</code>) could not be released. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM16044-E	An attempt to configure the system file (<code>CIFS.conf</code>) failed.	The system file (<code>CIFS.conf</code>) could not be copied to a temporary file, so the settings could not be changed. (O)

Message ID	Message	Description and Action
		Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM16045-E	An attempt to configure the system file (<code>CIFS.conf</code>) failed.	An attempt to overwrite the system file (<code>CIFS.conf</code>) failed, so the settings could not be changed. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM16046-E	An attempt to read the configuration of the system file (<code>CIFS.conf</code>) failed.	The system file (<code>CIFS.conf</code>) could not be read correctly. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM16047-E	A setting required for Active Directory authentication could not be executed.	An attempt to change the system file (<code>krb5.conf</code>) failed. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM16049-E	An attempt to join the specified Active Directory failed.	An attempt to join the specified Active Directory failed because the (<code>net ads join</code>) command ended incorrectly. (O) Check the parameters for Active Directory authentication, the domain for the node or virtual server, and the DNS server for the node or virtual server. If you cannot resolve the problem, acquire all the Management log files, and then contact maintenance personnel. See Help for a list of the Management log files.
KAQM16050-E	An attempt to change the CIFS service authentication method failed.	An attempt to delete parameters for LDAP authentication failed. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM16051-E	An attempt to join the specified Active Directory failed.	Kerberos authentication with the specified parameters for the domain controller failed.

Message ID	Message	Description and Action
		(O) Check the parameters for Active Directory authentication, the domain for the node or virtual server, and the DNS server for the node or virtual server. If you cannot resolve the problem, acquire all the Management log files, and then contact maintenance personnel. See Help for a list of the Management log files.
KAQM16052-E	A command required for LDAP authentication failed.	The password for binding the LDAP server could not be set. (O) Acquire all the Management log files, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM16053-E	The specified comment for a public key is inappropriate.	The same comment cannot be assigned to each key with the same SSH protocol. (O) Assign a differently comment to each key.
KAQM16055-E	The specified service is currently using another user, so the service cannot be operated.	A conflict with another system administrator's operation or system error may have occurred. (O) Execute the same processing again after waiting. Acquire all the Management log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQM16056-E	The specified service was already stopped.	An attempt was made to stop an already stopped service. (O) Check the specified service and operational status and, if necessary, try again. Note: If this message is displayed after command execution, select the correct control options, and then retry the command.
KAQM16057-E	The specified service cannot be started because it does not have a 'Stopped' status. (status= <i>current-service-status</i>)	The specified service cannot be started because it does not have a 'Stopped' status. The service is already running and operating normally, or the status is 'Failover', 'Offline', or 'Down'.

Message ID	Message	Description and Action
		<p>(O)</p> <p>If the resource group is in the Offline status or a failover is occurring, resolve the problem and try again. In other cases, check the status of the specified service and, if necessary, try again.</p> <p>Note:</p> <p>If this message is displayed after command execution, select the correct control options, and then retry the command.</p>
KAQM16058-E	An attempt to restore the system file (<code>CIFS.conf</code>) failed after modification of the CIFS service configuration failed.	<p>The system file (<code>CIFS.conf</code>) could not be copied from before the last editing, or an attempt to restart the CIFS service failed.</p> <p>(O)</p> <p>Check the entered data, and then retry execution. If the authentication mode is NT domain or Active Directory authentication, check the domain controller settings (and the LDAP server settings if necessary). Acquire all the Management log files if execution fails, and inform maintenance personnel. See the help for a list of the Management log files.</p> <p>Details:</p> <p>For details on the action to be taken, see <i>E. Troubleshooting for Message KAQM16058-E</i>.</p>
KAQM16059-E	An attempt to restore the public key failed.	<p>The home directory for the SSH account (<code>/home/nasroot/</code>) might not have enough space, or a problem might have occurred while processing a system file or restoring a public key.</p> <p>(O)</p> <p>Delete any unnecessary files in the home directory for the SSH account (<code>/home/nasroot/</code>), and then retry the operation. If the error continues to occur, acquire all Management log files, and inform maintenance personnel. See the help for a list of the Management log files.</p> <p>Note:</p> <p>Delete unnecessary files by using the <code>rmfile</code> command.</p>
KAQM16061-E	The number of public keys with the same SSH protocol	An attempt is being made to add a public key that will make the number

Message ID	Message	Description and Action
	has already reached the maximum number (128).	of public keys with the same SSH protocol exceed the maximum (128). (O) Delete an unnecessary public key with the same SSH protocol, and then retry.
KAQM16062-E	An attempt to join the specified Active Directory failed.	An attempt to join the specified Active Directory failed because the (<code>net ads join</code>) command could not execute correctly. (O) Check the domain controller settings, and then retry execution. Acquire all the Management log files if execution fails, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM16063-E	An attempt to delete the system file (user map cache) failed.	A problem may exist in the processing of the system file or service. (O) Retry execution. Acquire all the Management log files if execution fails, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM16064-E	An attempt to stop the CIFS service failed.	A problem may exist in the processing of the system file or service. (O) Retry execution. Acquire all the Management log files if execution fails, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM16065-E	An attempt to start the CIFS service failed.	A problem may exist in the processing of the system file or service. (O) Retry execution. Acquire all the Management log files if execution fails, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM16066-E	The operation cannot be executed in the current service status. (error details= <i>error-details</i>)	The operation failed because of the reason shown in (error details). (O) Take action according to the (error details). Acquire all the Management log files if the error occurs again, and then inform maintenance personnel. See the help for a list of the Management log files.

Message ID	Message	Description and Action
KAQM16067-E	The operation cannot be executed in the current authentication mode.	The operation is available only in the Active Directory authentication mode. (O) Execute this in the Active Directory authentication mode.
KAQM16068-E	An attempt to connect to the LDAP server failed. (error details= <i>error-details</i>)	The user mapping settings do not match the settings on the LDAP server side. (O) Check the LDAP server settings and CIFS service configuration, and then retry execution. Acquire all the Management log files if execution fails, and inform maintenance personnel. See the help for a list of the Management log files. Details: For details on the action to be taken, see <i>F. Troubleshooting for Message KAQM16068-E</i> .
KAQM16069-W	The operation ended normally, but the authentication server could not be connected to. You might not be able to log in to the CIFS server from a CIFS client.	An attempt to connect to the authentication server failed. (O) Confirm that the authentication server settings are correct and that there are no network problems. Correct any problems, and then retry the operation.
KAQM16072-E	An attempt to confirm the connection to the DC server has failed.	A problem may exist in the processing of the system file or service. (O) Retry execution. Acquire all the Management log files if execution fails, and inform maintenance personnel. See the help for a list of the Management log files. Details: The KAQM16072-E message is output when the NT domain authentication or Active Directory authentication is set and connection with the domain controller times out. In that case, check whether the specified domain server is running correctly and the network configuration allows for connection with the domain server. Correct the problem and then try again.

Message ID	Message	Description and Action
KAQM16073-E	This operation cannot be executed in the current state of the resource group.	The resource group is in the Offline state, or a failover might be occurring. (O) If the resource group is in the Offline state or a failover is occurring, resolve the problem and then try again. Acquire all the Management log files if execution fails, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM16074-E	An error exists in the value specified for the owner. (entered data = <i>owner</i>)	An unregistered user was specified, or a character that cannot be specified for an owner was specified. (O) Specify a registered user.
KAQM16075-E	An error exists in the value specified for the group. (entered data = <i>group</i>)	An unregistered group was specified, or a character that cannot be specified for a group was entered. (O) Specify a registered group.
KAQM16076-E	The file system specified for the directory is not mounted. This might be due to the resource group being in the Offline state, a failover occurring, or a virtual server not operating normally. (entered value = <i>directory-name</i>)	The file system specified for the directory is not mounted. This might be due to the resource group being in the Offline state, a failover occurring, or a virtual server not operating normally. (O) If the resource group is in the Offline state, a failover is occurring, or a virtual server is not operating normally, remove the cause of the problem and then try again. If the file system is not mounted, mount it, and then try again.
KAQM16077-E	The specified directory does not exist. (entered data = <i>directory-name</i>)	The entered directory does not exist. (O) For an FTP or SFTP service, either specify an existing directory, or in the GUI that manages the configuration definition, in [Directory creation / change], select [Create / Change]. After that, retry the operation. For a TFTP service, specify an existing directory, and then retry the operation.
KAQM16078-E	The specified directory could not be created and permissions could not be set for it. Possible reasons include the failure of an import from another file server, or the file	Directories cannot be created and permissions cannot be set for them if an import from another file server failed, or the file system was mounted without write permissions. If the file system was mounted with write

Message ID	Message	Description and Action
	system was mounted without write permissions. (directory name = <i>directory-name</i>)	permissions, then the file system capacity is insufficient, there is a conflict with operations of another administrator, or an internal error might have occurred. (O) Check the HSM Core log (<i>hsmarc.log</i>), and if an error message was output, use it to help resolve the problem. If the file system was mounted with write permissions, retry the operation. If the file system capacity is insufficient, delete any unnecessary data or expand the file system capacity, and then retry the operation. If write permissions cannot be granted for the file system, retry the operation without selecting ' Create/Change '. If an error occurs again, acquire all the Management log files and contact maintenance personnel. See the help for a list of the Management log files.
KAQM16079-E	The specified directory contains a relative path or symbolic link. (specified value = <i>directory-name</i>)	The specified directory contains a relative path or symbolic link. (O) Specify a directory using an absolute path.
KAQM16080-E	The specified directory operation failed. The file system might be blocked. (specified value = <i>directory-name</i>)	The specified directory operation failed. The file system may be blocked. (O) In the file system list, check the status of the file system. If the status indicates an error, take appropriate action. If you cannot check the status or the error occurs again, contact the maintenance personnel.
KAQM16081-E	Acquisition of user information has failed.	An internal error occurred or, during acquisition processing, another system administrator might have deleted a user to whom access will not be granted. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM16082-E	The entered 'Number of simultaneous connections' data is outside the valid range (10 to 500).	Enter a value from 10 to 500 for 'Number of simultaneous connections'. (O)

Message ID	Message	Description and Action
		Check the entered data, and enter again.
KAQM16083-E	The entered 'Connection timeout wait time' data is outside the valid range (30 to 43200).	Enter a value from 30 to 43200 for 'Connection timeout wait time'. (O) Check the entered data, and enter again.
KAQM16084-E	The directory operation cannot be performed because the file system corresponding to the specified directory is defined by the other node in the cluster. (specified value = <i>directory-name</i>)	The directory operation cannot be performed because the file system corresponding to the specified directory is defined by the other node in the cluster. (O) Specify a login directory corresponding to a file system created on the operating node.
KAQM16085-E	The name of a file that already exists was specified. (specified value = <i>directory-name</i>)	The name of a file that already exists was specified. (O) Specify the directory.
KAQM16086-E	The directory operation cannot be performed because the file system corresponding to the specified directory does not exist. (specified value = <i>directory-name</i>)	The directory operation cannot be performed because the file system corresponding to the specified directory does not exist. (O) In the list of file systems check the file system name, and then specify the right file system name.
KAQM16087-E	The specified directory cannot be used. (specified value= <i>directory-name</i>)	For the login directory, you must specify either a mount point, or a mount point and subdirectory. (O) For the login directory, specify a mount point, or a mount point and subdirectory.
KAQM16088-E	The capacity of the differential-data storage device is insufficient.	This operation cannot be performed because the capacity of the differential-data storage device is insufficient. (O) Resolve the problem by using file snapshot functionality operations. For details on the operation, see the help.
KAQM16089-E	The directory corresponding to the file system defined by another node in the cluster cannot be set up. The cause	An attempt to acquire information about the directory corresponding to the file system defined by another node in the cluster failed. The cause might be a communication error.

Message ID	Message	Description and Action
	might be a communication error. (specified value= <i>directory-name</i>)	(O) Make sure that the node in the cluster has not stopped, check for network errors, and then retry the operation. If the error occurs again, acquire all the Management log files, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM16091-E	The value of the <i>parameter-name</i> parameter is invalid.	The format (such as a string or numerical value) for the specified parameter is invalid. (O) Check the command format, specify a valid parameter value, and then try again.
KAQM16092-E	The <i>parameter-name</i> parameter is too short or too long.	The length of the specified parameter is invalid. (O) Check the command format, specify a valid parameter value, and then try again.
KAQM16093-E	A character that cannot be used for the comment is entered.	A character that cannot be used for the comment is entered. (O) Enter a valid comment, and then try again.
KAQM16094-E	A space cannot be specified at the beginning or end of the comment.	A space cannot be specified at the beginning or end of the comment. (O) Enter a valid comment, and then try again.
KAQM16095-E	A character that cannot be used for the specified file is entered.	A character that cannot be used for the specified file is entered. (O) Enter a valid name for the file, and then try again.
KAQM16096-E	0 has been specified for the name of the public key file.	0 cannot be specified for the name of the public key file. (O) Enter a valid name for the public key file, and then try again.
KAQM16097-E	A space cannot be specified at the beginning or end of the public key file.	A space cannot be specified at the beginning or end of the public key file. (O) Enter a valid name for the public key file, and then try again.

Message ID	Message	Description and Action
KAQM16098-E	An SSH public key does not exist for the specified comment. (comment = <i>comment</i>)	The specified comment is not registered in the specified SSH protocol. (O) Confirm whether the specified comment exists in the specified SSH protocol, and then try again.
KAQM16099-E	The specified file does not exist in the home directory. (file name = <i>file-name</i>)	The specified file does not exist in the home directory. (O) Confirm whether the specified file exists in the home directory.
KAQM16100-E	The specified file cannot be deleted because it is a directory. (file name = <i>file-name</i>)	The specified file cannot be deleted because it is a directory. (O) Specify a valid file name, and then try again.
KAQM16101-E	The specified file cannot be deleted because it is a system file. (file name = <i>file-name</i>)	The specified file cannot be deleted because it is a system file. (O) Specify a valid file name, and then try again.
KAQM16102-E	The size of the specified file exceeds 1,000,000 bytes. (file name = <i>file-name</i>)	The size of the specified file exceeds 1,000,000 bytes. (O) Specify a valid public key file, and then try again.
KAQM16103-W	The operation ended normally, but an attempt to connect to the DC server (<i>DC-server-name</i>) has failed.	A problem might exist in some DC servers specified for the DC server name. (O) Check the status of the DC server and CIFS service configuration. If the DC server name has been changed, modify the configuration definitions of the CIFS service.
KAQM16104-E	The specified file cannot be specified as the public key file because it is a system file. (file name = <i>file-name</i>)	The specified file cannot be specified as the public key file because it is a system file. (O) Specify a valid public key file, and then try again.
KAQM16107-E	Name resolution failed because the CIFS service's authentication mode was not NT domain authentication or	The specified CIFS service's authentication mode was neither NT domain authentication nor Active Directory authentication. (O)

Message ID	Message	Description and Action
	Active Directory authentication.	Set the CIFS service's authentication mode as either NT domain authentication or Active Directory authentication, and then try again.
KAQM16108-E	Name resolution failed because the user mapping of the CIFS service does not use RIDs.	The CIFS service settings specify user mapping that does not use RIDs. (O) Specify that the user mapping of the CIFS service is to use RIDs, and then try again.
KAQM16109-E	Name resolution failed. This might be because the CIFS service was stopped, the resource group was in the Offline status, a failover occurred, or virtual server was not operating normally.	This might be because the CIFS service was stopped, the resource group was in the Offline status, a failover occurred, or virtual server was not operating normally. (O) If the CIFS service has stopped, either start or restart the CIFS service. If the resource group is in the Offline status, a failover has occurred, or virtual server is not operating normally, remove the cause of the problem and then try again.
KAQM16110-E	Name resolution failed because an account not registered in the authentication server was specified or communication with the authentication server was not possible.	An account that is not registered in the authentication server was specified, or communication with the authentication server was not possible. (O) Check whether there is any error in the specified account, and/or make sure the authentication server is correctly connected, and then try again.
KAQM16111-E	Name resolution failed because the ID assigned to the specified user name or group name is outside the range of UIDs and GIDs set for the domain (in user mapping using RIDs), or because communication with the authentication server was not possible.	The ID assigned to the specified user name or group name is outside the range of UIDs or GIDs set for the domain (using RID user mapping), or communication with the authentication server was not possible. Alternatively, communication with the authentication server was not possible. (O) Revise the range of UIDs or GIDs set for the domain (in user mapping using RIDs), and/or make sure that the specified name or group name is correct, or make sure the authentication server is correctly connected, and then try again. If there is no problem with the UID and GID, make sure the authentication server is connected correctly, and then try again.

Message ID	Message	Description and Action
KAQM16112-E	Name resolution failed because the specified ID is outside the range of the UIDs and GIDs set by the domain (using RID user mapping).	The specified ID is outside the range of the user IDs or group IDs set for the domain (in user mapping using RIDs). (O) Make sure the specified ID is correct, and then try again.
KAQM16114-E	The UID and GID ranges specified for the domain cannot be used because they overlap a range for another domain.	The ID ranges cannot be set because the UID and GID ranges specified for the domain overlap a range for another domain. (O) Specify the UID and GID ranges for each domain so they do not overlap.
KAQM16115-E	The specified UID and GID ranges cannot be used because there is a conflict between the UID and GID ranges for user mapping and the UID and GID ranges for a domain.	The UID and GID ranges for each domain must be within the UID and GID ranges for user mapping. (O) Specify valid UID and GID ranges, and then try again.
KAQM16117-E	An attempt to set user mapping using LDAP failed because the CIFS service's authentication mode was neither NT domain authentication nor Active Directory authentication.	The specified CIFS service's authentication mode was neither NT domain authentication nor Active Directory authentication. (O) Set the CIFS service's authentication mode as either NT domain authentication or Active Directory authentication, and then try again.
KAQM16119-E	The CIFS service has stopped because it is unavailable.	The DC server might be down, an invalid value might have been entered for the DC server name, the manager name or the password of the DC server might be invalid, or a problem might have occurred on the network. (O) Check the status of the DC server and CIFS service configuration, and then start the CIFS service. If the DC server name has been changed, modify the configuration definitions of the CIFS service.
KAQM16120-E	The CIFS service has stopped because it is unavailable.	Information about trust relationships cannot be obtained from the domain belonging to the DC server set in the authentication mode. There might be an error in the settings, or a problem might have occurred in the DC server or on the network. (O)

Message ID	Message	Description and Action
		Check the status of the DC server and CIFS service configuration, and then start the CIFS service. If the DC server name has been changed, modify the configuration definitions of the CIFS service.
KAQM16121-E	The CIFS service has stopped because it is unavailable.	The domain set for user mapping using RIDs is not in a trust relationship with a domain belonging to the DC server set in the authentication mode. (O) Check the status of the DC server and CIFS service configuration, and then start the CIFS service. If the DC server name has been changed, modify the configuration definitions of the CIFS service.
KAQM16123-E	Deletion of cached user mapping information completed normally. However, the CIFS service has stopped because it is unavailable.	The DC server might be down, an invalid value might have been entered for the DC server name, the manager name or the password of the DC server might be invalid, or a problem might have occurred on the network. (O) Check the status of the DC server and CIFS service configuration, and then start the CIFS service. If the DC server name has been changed, modify the configuration definitions of the CIFS service.
KAQM16124-E	Deletion of cached user mapping information completed normally. However, the CIFS service has stopped because it is unavailable.	Information about trust relationships cannot be obtained from the domain belonging to the DC server set in the authentication mode. There might be an error in the settings, or a problem might have occurred in the DC server or on the network. (O) Check the status of the DC server and CIFS service configuration, and then start the CIFS service. If the DC server name has been changed, modify the configuration definitions of the CIFS service.
KAQM16125-E	Deletion of cached user mapping information completed normally. However, the CIFS service has stopped because it is unavailable.	The domain set for user mapping using RIDs is not in a trust relationship with a domain belonging to the DC server set in the authentication mode. (O) Check the status of the DC server and CIFS service configuration, and then start the CIFS service. If the DC server

Message ID	Message	Description and Action
		name has been changed, modify the configuration definitions of the CIFS service.
KAQM16127-E	The user map cache file cannot be deleted because the resource group on the other node in the cluster has failed over to the operating node.	The user map cache file cannot be deleted because the resource group on the other node in the cluster has failed over to the operating node. (O) Perform failback, and then retry the operation.
KAQM16128-E	The parameter <i>parameter-name</i> includes characters with unsupported encoding.	The parameter <i>parameter-name</i> includes characters with unsupported encoding. (O) Specify the parameter by using only characters with supported encoding.
KAQM16130-Q	Are you sure you want to stop the specified service? (y/n)	This confirmation message is output before the service is stopped. (O) Enter y or n.
KAQM16131-Q	Are you sure you want to restart the specified service? (y/n)	This confirmation message is output before the service is restarted. (O) Enter y or n.
KAQM16133-E	User mapping that uses the Active Directory schema could not be set up because the authentication mode of the CIFS service is not Active Directory.	The authentication mode set for the CIFS service is not Active Directory. (O) Set the authentication mode of the CIFS service to Active Directory, and then try again.
KAQM16134-E	A character that cannot be used in the parameter is specified. (error details = <i>specified-parameter</i>)	A character that cannot be used in the parameter is specified. (O) Specify a valid parameter value, and then try again.

KAQM16137-E	The length of the parameter exceeds the maximum. (error details = <i>specified-parameter</i>)	The length of the parameter exceeds the maximum. (O) Specify a valid parameter value, and then try again.
KAQM16138-E	"0" cannot be specified at the beginning of the parameter. (error details = <i>specified-parameter</i>)	"0" cannot be specified at the beginning of the parameter. (O) Specify a valid parameter value, and then try again.
KAQM16139-E	The parameter is outside the valid range (<i>minimum-value-of-the-parameter - maximum-value-of-the-parameter</i>). (error details = <i>specified-parameter</i>)	The parameter is outside the valid range (<i>minimum-value-of-the-parameter - maximum-value-of-the-parameter</i>). (O) Specify a valid parameter value, and then try again.
KAQM16140-E	The minimum value of the parameter exceeds the maximum value. (error details = <i>specified-parameter</i>)	The minimum value of the parameter exceeds the maximum value. (O) Check the command format, specify a valid parameter value, and then try again.
KAQM16141-E	The number of domain controllers (with Active Directory authentication) exceeds the maximum number of domain controllers that can be registered (5). (error details = <i>specified-parameter</i>)	The number of domain controllers (with Active Directory authentication) exceeds the maximum number of domain controllers that can be registered (5). (O) Specify no more than 5 domain controllers (with Active Directory authentication).
KAQM16142-E	The number of domains exceeds the maximum number of domains that can be registered (6). (error details = <i>specified-parameter</i>)	The number of domains exceeds the maximum number of domains that can be registered (6). (O) Specify no more than 6 domains.
KAQM16143-E	A parameter required for the first setting was not specified.	A parameter required for the first setting was not specified. (O) For the first setting, specify all parameters.
KAQM16144-E	The specified server name is duplicated. (error details = <i>specified-parameter</i>)	The specified server name is duplicated. (O)

Message ID	Message	Description and Action
		Specify a server name that does not duplicate another server name.
KAQM16145-E	A comma (,) cannot be specified at the beginning or end of the parameter. (error details = <i>specified-parameter</i>)	A comma (,) cannot be specified at the beginning or end of the parameter. (O) Specify a valid parameter value, and then try again.
KAQM16146-E	You cannot specify SSH protocol version 1.	SSH protocol version 1 has been disabled. (O) If you want to specify SSH protocol version 1, first enable it, and then try again. Note: Use the <code>sshprotset</code> command to enable SSH protocol version 1.
KAQM16147-E	SSH protocol version 1 has already been enabled.	SSH protocol version 1 has already been enabled. (O) None.
KAQM16148-E	SSH protocol version 1 has already been disabled.	SSH protocol version 1 has already been disabled. (O) None.
KAQM16149-Q	Executing this command will change the SSH settings and restart the SSH service. Do you want to proceed? (y/n)	This confirmation message is output when the operation will change the SSH settings. (O) Enter y or n.
KAQM16150-E	A setting in an unsupported format was detected for the SSH protocol version.	A setting in an unsupported format was detected for the SSH protocol version. (O) Try to execute the operation again. If an error occurs again, acquire all the management log files, and then contact maintenance personnel. See online Help for a list of the management files.
KAQM16151-E	SSL version 2 has already been enabled.	SSL version 2 has already been enabled. (O) None.
KAQM16152-E	SSL version 2 has already been disabled.	SSL version 2 has already been disabled. (O)

Message ID	Message	Description and Action
		None.
KAQM16153-Q	Executing this command will change the SSL settings and restart the HTTP service. Do you want to proceed? (y/n)	This confirmation message is output when the operation will change the SSL settings. (O) Enter y or n.
KAQM16154-E	A setting in an unsupported format was detected for the SSL version.	A setting in an unsupported format was detected for the SSL version. (O) Try to execute the operation again. If an error occurs again, acquire all the management log files, and then contact maintenance personnel. See online Help for a list of the management files.
KAQM16161-E	The configuration cannot be modified, because the domain and KDC server are being used by the CIFS service.	The domain and the KDC server cannot be deleted because they are being used in Active Directory authentication of the CIFS service. (O) When you stop Kerberos authentication operations, change the CIFS service authentication mode to one other than the Active Directory mode.
KAQM16162-E	The NFS service has stopped because it is unavailable.	The KDC server might be down, an invalid KDC server name might have been specified, or there might be a network problem. (O) Check the status of the KDC server and the NFS configuration. If the KDC server name has been changed, modify the NFS service configuration definitions, and then restart the NFS service.
KAQM16163-E	The NFS service has stopped because it is unavailable.	A user specified for the anonymous user name is not registered. (O) Specify a registered user, and then try again.
KAQM16164-E	The NFS service has stopped because it is unavailable.	A group specified for the anonymous group name is not registered. (O) Specify a registered group, and then try again.
KAQM16165-E	The service configuration was restored because an attempt	Copies of the pre-edit system files were copied and then restored, because an attempt to modify the NFS

Message ID	Message	Description and Action
	to modify the NFS service configuration failed. (error details= <i>error-details</i>) Changes to the NFS service configuration are incomplete.	service configuration failed, as indicated in the error details. (O) Check the entered data, and then try again. When using a domain environment, also check the domain settings. If an error still occurs, acquire all the Management log files, and inform maintenance personnel. See online Help for a list of the Management log files.
KAQM16166-E	An attempt to restore the service configuration failed because an attempt to modify the NFS service configuration failed.	Copies of the pre-edit system files could not be copied, or an attempt to restart the NFS service failed. (O) Check the entered data, and then try again. When using a domain environment, also check the domain settings. If an error still occurs, acquire all the Management log files, and inform maintenance personnel. See online Help for a list of the Management log files.
KAQM16167-W	The operation ended normally, but an attempt to connect to the KDC server (<i>KDC-server-name-of-connecting-error</i>) failed.	There might be a problem in one or more of the KDC servers specified by the KDC server names. (O) Check the status of the KDC server and the NFS configuration. If a KDC server name is changed, modify the NFS service configuration definitions.
KAQM16168-W	The operation ended normally, but an attempt to remove the node or virtual server from the Active Directory domain failed. The node or virtual server might not have been deleted from the Active Directory domain before attempting to remove the node or virtual server.	Before an attempt was made to remove the node or virtual server, the account associated with the Active Directory domain information might have been changed or deleted, or an attempt to acquire information about the node or virtual server computer account from the Active Directory domain might have failed. (O) Before attempting to remove a node or virtual server, delete any related computer accounts from the Active Directory domain.
KAQM16169-I	The configuration for the <i>service-name</i> service has been modified. Restart the <i>service-name</i> service. Rebooting the OS will not apply the changes.	The configuration for the <i>service-name</i> service has been modified. (O) Restart the <i>service-name</i> service.

Message ID	Message	Description and Action
KAQM16170-E	An attempt to start the <i>service-name</i> service has failed.	There might be a problem with the <i>service-name</i> service settings. (O) Check the service settings, and then restart the service.
KAQM16171-E	An attempt to start the <i>service-name</i> service has failed.	There might be a problem with the <i>service-name</i> service settings. (O) Follow the instructions in the KAQM16172-I message in the Management log file (<i>management.log</i>).
KAQM16172-I	The detailed message of the KAQM16171-E message is as follows: <i>detailed-message</i>	None. (O) Follow the instructions in the detailed message.
KAQM16173-Q	Do you want to delete the specified file? (y/n)	This message confirms that the user wants to delete the file. (O) Enter y or n.
KAQM16174-E	The combination of CIFS client cache settings is invalid.	If the CIFS client local cache setting is disabled, the CIFS client cache read-only setting cannot be enabled for when an access conflict occurs. (O) To enable the CIFS client cache read-only setting for when an access conflict occurs, enable the CIFS client local cache setting.
KAQM16175-E	The setting for allowing Active Directory users to log in to the FTP and SFTP services cannot be enabled because the CIFS service authentication mode is not set to Active Directory authentication.	The CIFS service authentication mode is not set to Active Directory authentication. (O) Set the CIFS service authentication mode to Active Directory authentication, and then retry the operation.
KAQM16186-E	The Active Directory domain cannot be redefined because the resource group on the other node in the cluster has failed over to the operating node.	The Active Directory domain cannot be redefined because the resource group on the other node in the cluster has failed over to the operating node. (O) Perform a failback, and then retry the operation.
KAQM16187-E	The Active Directory domain cannot be redefined because the user mapping of the CIFS	The operation is available only in the Active Directory schema. (O)

Message ID	Message	Description and Action
	service is not the Active Directory schema.	Recheck the settings of the authentication mode and the user mapping of the CIFS service.
KAQM16188-E	The maximum value or higher was specified for the minimum value of the parameter. (error details = <i>specified-parameter</i>)	The maximum value or higher cannot be specified for the minimum value of the parameter. (O) Check the command syntax, specify valid parameter values, and then retry the operation.
KAQM16189-E	An automatic start setting for a service on this node was changed. Confirm that the setting is consistent in the cluster.	An automatic start setting for a service on this node was changed. (O) Confirm the setting on the other node, making sure that the setting is the same within the cluster.
KAQM16190-E	The directory cannot be created and permissions cannot be changed because the specified directory is in a file system for which content sharing is set to On. (input value = <i>directory-name</i>)	Directories cannot be created and permissions cannot be changed for file systems for which content sharing is set to On. (O) Do not change permissions if a file system for which content sharing is set to On is specified for the login directory.
KAQM16191-E	Modification of the CIFS service configuration failed because the NT domain could not be joined.	The NT domain could not be joined. (O) Confirm the following, correct any problems, and then retry the operation: (1) The authentication mode setting is correct. (2) The primary domain controller is operating normally. (3) There are no network problems.
KAQM16192-E	Modification of the CIFS service configuration failed because the Active Directory domain could not be joined.	The Active Directory domain could not be joined. (O) Confirm the following, correct any problems, and then retry the operation: (1) The authentication mode setting is correct. (2) The domain controller is running correctly. (3) The domain name to be used for the Active Directory domain is defined

Message ID	Message	Description and Action
		<p>as the default domain name in the DNS server information, and the DNS server to be used for the Active Directory domain is defined as the primary DNS server.</p> <p>(4) There are no domain controller setting problems. For details of how to configure the domain controller, see online Help.</p> <p>(5) There are no network problems.</p>
KAQM16193-E	Modification of the CIFS service configuration failed because an LDAP user mapping item (<i>LDAP-user-mapping-item</i>) is not set.	<p>An LDAP user mapping item (<i>LDAP-user-mapping-item</i>) is not set.</p> <p>(O)</p> <p>Check the entered LDAP server setting values. Correct any problems, and then retry the operation.</p>
KAQM16194-E	The CIFS service stopped because an LDAP user mapping item (<i>LDAP-user-mapping-item</i>) is not set.	<p>An LDAP user mapping item (<i>LDAP-user-mapping-item</i>) is not set.</p> <p>(O)</p> <p>Check the entered LDAP server setting values. Correct any problems, and then retry the operation.</p>
KAQM16195-E	Modification of the CIFS service configuration failed because an LDAP user mapping setting (<i>LDAP-user-mapping-item</i>) does not match the setting on the LDAP server side.	<p>An LDAP user mapping setting (<i>LDAP-user-mapping-item</i>) does not match the setting on the LDAP server side.</p> <p>(O)</p> <p>Check the entered LDAP server setting values. Correct any problems, and then retry the operation.</p>
KAQM16196-E	The CIFS service was stopped because an LDAP user mapping setting (<i>LDAP-user-mapping-item</i>) does not match the setting on the LDAP server side.	<p>An LDAP user mapping setting (<i>LDAP-user-mapping-item</i>) does not match the setting on the LDAP server side.</p> <p>(O)</p> <p>Check the entered LDAP server setting values. Correct any problems, and then retry the operation.</p>
KAQM16197-E	Modification of the CIFS service configuration failed because the LDAP server is not properly configured.	<p>The LDAP server is not properly configured.</p> <p>(O)</p> <p>Confirm the following, correct any problems, and then retry the operation:</p> <p>(1) The schema files are defined as described in the <i>File System Protocols (CIFS/NFS) Administrator's Guide</i>.</p> <p>(2) The user who will connect to the user map has the necessary permissions to write to the specified entries.</p>

Message ID	Message	Description and Action
KAQM16198-E	The CIFS service stopped because the LDAP server is not properly configured.	The LDAP server is not properly configured. (O) Confirm the following, correct any problems, and then retry the operation: (1) The schema files are defined as described in the <i>File System Protocols (CIFS/NFS) Administrator's Guide</i> . (2) The user who will connect to the user map has the necessary permissions to write to the specified entries.
KAQM16199-E	Modification of the CIFS service configuration failed because the LDAP server could not be connected to.	The LDAP server could not be connected to. (O) Confirm the following, correct any problems, and then retry the operation: (1) The LDAP server name and port number settings are correct. (2) The LDAP server is operating normally. (3) The DNS server settings are correct. (4) There are no network problems.
KAQM16200-E	The CIFS service stopped because the LDAP server could not be connected to.	The LDAP server could not be connected to. (O) Confirm the following, correct any problems, and then retry the operation: (1) The LDAP server name and port number settings are correct. (2) The LDAP server is operating normally. (3) The DNS server settings are correct. (4) There are no network problems.
KAQM16201-E	Modification of the CIFS service configuration failed because the authentication server could not be connected to.	The authentication server could not be connected to. (O) Check the authentication server settings and the network status. Correct any problems, and then retry the operation.
KAQM16202-E	Modification of the CIFS service configuration failed	Information about trust relationships could not be acquired.

Message ID	Message	Description and Action
	because information about trust relationships could not be acquired.	<p>(O)</p> <p>Confirm the following, correct any problems, and then retry the operation:</p> <p>(1) The authentication mode setting is correct.</p> <p>(2) The DNS server settings are correct.</p> <p>(3) If the DNS server is defined in the DNS server information, make sure that the DNS server settings, such as for records, zones, and recursion, are correctly configured so that the DNS server takes less than 15 seconds to reply to requests to resolve the name (forward and reverse lookup) of the domain controller.</p>
KAQM16203-E	Startup of the CIFS service configuration failed because information about trust relationships could not be acquired.	<p>Information about trust relationships could not be acquired.</p> <p>(O)</p> <p>Confirm the following, correct any problems, and then retry the operation:</p> <p>(1) The authentication mode setting is correct.</p> <p>(2) The DNS server settings are correct.</p> <p>(3) If the DNS server is defined in the DNS server information, make sure that the DNS server settings, such as for records, zones, and recursion, are correctly configured so that the DNS server takes less than 15 seconds to reply to requests to resolve the name (forward and reverse lookup) of the domain controller.</p>
KAQM16204-E	The restart of the CIFS service configuration failed because information about trust relationships could not be acquired.	<p>Information about trust relationships could not be acquired.</p> <p>(O)</p> <p>Confirm the following, correct any problems, and then retry the operation:</p> <p>(1) The authentication mode setting is correct.</p> <p>(2) The DNS server settings are correct.</p> <p>(3) If the DNS server is defined in the DNS server information, make sure that the DNS server settings, such as for records, zones, and recursion, are correctly configured so that the DNS</p>

		server takes less than 15 seconds to reply to requests to resolve the name (forward and reverse lookup) of the domain controller.
KAQM16205-E	Modification of the CIFS service configuration failed because the specified domain name (<i>specified-domain-name</i>) is for a domain controller that is in a domain not in a trust relationship. (domain in a trust relationship = <i>domain-in-a-trust-relationship</i>)	The specified domain name is for a domain controller that is in a domain not in a trust relationship. (O) Specify a domain name for a domain controller that is in a domain in a trust relationship, and then retry the operation.
KAQM16206-E	Startup of the CIFS service configuration failed because the specified domain name (<i>specified-domain-name</i>) is for a domain controller that is in a domain not in a trust relationship.(domain in a trust relationship = <i>domain-in-a-trust-relationship</i>)	The specified domain name is for a domain controller that is in a domain not in a trust relationship. (O) Specify a domain name for a domain controller that is in a domain in a trust relationship, and then retry the operation.
KAQM16207-E	The restart of the CIFS service configuration failed because the specified domain name (<i>specified-domain-name</i>) is for a domain controller that is in a domain not in a trust relationship. (domain in a trust relationship = <i>domain-in-a-trust-relationship</i>)	The specified domain name is for a domain controller that is in a domain not in a trust relationship. (O) Specify a domain name for a domain controller that is in a domain in a trust relationship, and then retry the operation.
KAQM16208-E	Modification of the CIFS service configuration failed because the administrator name, password, or domain name of the DC server is incorrect.	The administrator name, password, or domain name of the DC server is incorrect. (O) Check the administrator name, password, and domain name of the DC server. Correct any problems, and then retry the operation.
KAQM16209-W	The operation ended normally, but the DC server could not be connected to because authentication of the administrator failed. You might not be able to log in to the CIFS server from a CIFS client.	The administrator name, password, or domain name of the DC server is incorrect. (O) Check the administrator name, password, and domain name of the DC server. Correct any problems, and then retry the operation.
KAQM16210-E	Modification of the CIFS service configuration failed because the schemas	The schemas specified for the name service switch of Active Directory

Message ID	Message	Description and Action
	specified for the name service switch of Active Directory schema user mapping and the domain controller are different. (domain controller server name = <i>domain-controller-server-name</i>)	schema user mapping and the domain controller are different. (O) Check the schemas specified for the name service switch of Active Directory schema user mapping and the domain controller. Correct any problems, and then retry the operation.
KAQM16211-E	The CIFS service stopped because the schemas specified for the name service switch of Active Directory schema user mapping and the domain controller are different. (domain controller server name = <i>domain-controller-server-name</i>)	The schemas specified for the name service switch of Active Directory schema user mapping and the domain controller are different. (O) Check the schemas specified for the name service switch of Active Directory schema user mapping and the domain controller. Correct any problems, and then retry the operation.
KAQM16212-E	Modification of the CIFS service configuration failed because the DC server could not be connected to.	The DC server could not be connected to. (O) Confirm the following, correct any problems, and then retry the operation: (1) The DC server is operating normally. (2) The DNS server settings are correct. (3) There are no network problems.
KAQM16213-E	The CIFS service stopped because the DC server could not be connected to.	The DC server could not be connected to. (O) Confirm the following, correct any problems, and then retry the operation: (1) The DC server is operating normally. (2) The DNS server settings are correct. (3) There are no network problems.
KAQM16214-E	Modification of the CIFS service configuration failed because the DC server could not be connected to.	The DC server could not be connected to. (O) Confirm the following, correct any problems, and then retry the operation: (1) The DC server settings are correct.

Message ID	Message	Description and Action
		<p>(2) The DC server is operating normally.</p> <p>(3) The DNS server settings are correct</p> <p>(4) If the DNS server is defined in the DNS server information, make sure that the DNS server settings, such as for records, zones, and recursion, are correctly configured so that the DNS server takes less than 15 seconds to reply to requests to resolve the name (forward and reverse lookup) of the domain controller.</p> <p>(5) The domain controller policy is set so that no LDAP server signature is required.</p>
KAQM16215-W	The operation ended normally, but the DC server could not be connected to. Message ID	Message	Description and Action
KAQM16223-E	The CIFS service stopped because the NT domain could not be joined.	The NT domain could not be joined. (O) Confirm the following, correct any problems, and then retry the operation: (1) The authentication mode setting is correct. (2) The primary domain controller is operating normally. (3) There are no network problems.
KAQM16224-E	Modification of the CIFS service configuration failed because DC server information could not be acquired.	Acquisition of DC server information failed. (O) Confirm the following, correct any problems, and then retry the operation: (1) The specified domain name is correct. (2) The specified DNS server is correct. (3) The DNS server settings are correct. (4) The DC server is operating normally. (5) There are no network problems.
KAQM16225-E	The directory cannot be specified because it is in a file system for which home-directory roaming is enabled. (specified value = <i>directory-name</i>)	Directories in file systems for which home-directory roaming is enabled cannot be specified. (O) Check the specified directory, and then retry the operation.
KAQM16227-E	The specified path includes a directory that is used by the system. (directory used by system = <i>directory-path</i>)	You cannot perform the operation on a path that contains a directory that is used by the system. (O) Specify a path that does not include a system directory, and then retry the operation.
KAQM16229-E	A specified path is not a directory of the file system.	The specified path does not start with <code>"/mnt"</code> , or <code>"/mnt"</code> is specified. (O) Check the specified path, and then retry the operation.
KAQM16230-E	The specified path exceeds 256 characters.	The specified path exceeds 256 characters. (O)

Message ID	Message	Description and Action
		Specify the path by using no more than 256 characters.
KAQM16231-E	The path specified as the TFTP access directory contains one or more invalid characters.	The path specified as the TFTP access directory contains one or more invalid characters. (O) Check the specified path, and then retry the operation.
KAQM16232-E	An attempt to start or restart the TFTP service failed.	A TFTP access directory is not set. (O) Set the TFTP access directory, and then start the TFTP service.
KAQM16233-E	An attempt to set automatic startup of the TFTP service failed, because a TFTP access directory is not set.	The TFTP access directory is not set. (O) Set the TFTP access directory, start the TFTP service, and then set it to start automatically.
KAQM16234-Q	Do you want to clear all of the settings for the TFTP service? (y/n)	This message appears before the settings of the TFTP service are cleared. (O) Enter y or n.
KAQM16235-E	The settings for the TFTP service could not be deleted because the service is running.	The TFTP service is either set to start automatically, or has not been stopped. (O) If you will continue using the TFTP service, do not delete the settings for the service. If you will stop using the service, either set the TFTP service to not start automatically or stop the service.
KAQM16236-E	You cannot specify a directory that is not the mount point of a read-write-content-sharing file system. (specified value = <i>directory-name</i>)	You cannot specify a directory that is not the mount point of a read-write-content-sharing file system. (O) Check the specified directory, and then retry the operation.
KAQM16237-E	You cannot obtain information about the CIFS service or change the configuration of the CIFS service, because the system files of the CIFS service have not been updated.	The system files of the CIFS service have not been updated, because the resource group is in the Offline state. (O) Change the resource group of the execution node to the Online state, and then try again.
KAQM16238-E	You cannot specify the setting to check for modifications of	The Volume Shadow Copy Service is not used.

Message ID	Message	Description and Action
	files for snapshots because the Volume Shadow Copy Service is not used.	(O) Specify settings so that the Volume Shadow Copy Service is used, and then retry the operation.

KAQM19 messages

This section explains messages that have a message ID beginning with KAQM19, and the actions to be taken if such messages appear.

Table 5-13 KAQM19 messages

Message ID	Message	Description and Action
KAQM19001-I	The File Services Manager server has started.	No action is required.
KAQM19002-I	The File Services Manager server has stopped.	No action is required.
KAQM19003-E	An attempt to start the File Services Manager server has failed. (details = <i>details</i>)	The database might not have started. Alternatively, the File Services Manager server might not be installed correctly, or the environment might be invalid. (O) Restart the File Services Manager server, because the error might be temporary. Check that the database has started by executing the <code>hcmdssrv /status</code> command. The KAPM06440-I message should be displayed. If it is not displayed, start the database by executing the <code>hcmdssrv /start</code> command. For more information about commands, see online Help. If the problem is still not resolved, acquire the management server log files, and then contact maintenance personnel.
KAQM19004-E	An attempt to stop the File Services Manager server has failed. (details = <i>details</i>)	The database might not have started. (O) The error might be temporary, so try to stop the File Services Manager server again. Alternatively, the database might not be running, so execute the <code>hcmdssrv /status</code> command and check whether the KAPM06440-I message is output. If

Message ID	Message	Description and Action
		<p>the message is not output, execute the <code>hcmdssrv /start</code> command to start the database, and then try to stop the File Services Manager server again. For more information about commands, see online Help.</p> <p>If you cannot resolve the problem, acquire the management server log files, and then contact maintenance personnel.</p>
KAQM19005-I	The property was loaded successfully. (<i>property-name</i> = <i>property-value</i>)	No action is required.
KAQM19030-E	An internal error occurred.	<p>An internal error occurred.</p> <p>(O)</p> <p>Acquire all the log files and the management server log files, and then contact maintenance personnel.</p>
KAQM19038-E	The operation has failed.	<p>There might be a conflict with an internal process or an operation performed by another administrator.</p> <p>(O)</p> <p>Wait for a while, and then try again.</p>
KAQM19100-E	An attempt to authenticate the user has failed.	<p>An attempt to authenticate the user has failed.</p> <p>(O)</p> <p>Log in again.</p>
KAQM19102-E	An error occurred while the tree was being created.	<p>More than one administrator might have deleted or modified the processing node.</p> <p>(O)</p> <p>Select the target resource from the explorer menu or refresh the tree.</p>
KAQM19105-E	There is no online Help for this function.	<p>There is no online Help for this function.</p> <p>(O)</p> <p>Refer to the manual corresponding to the Processing Node version.</p>
KAQM19106-E	The user ID or password is incorrect. If account lockout is enabled, your account might have been locked.	<p>The user ID or password is incorrect. If account lockout is enabled, your account might have been locked.</p> <p>(O)</p> <p>Check the user ID and password, and then re-enter them. If account lockout is enabled, cancel account lockout and try again. If the error still occurs, inform maintenance personnel.</p>

Message ID	Message	Description and Action
KAQM19107-E	An attempt to log in has failed.	<p>Possible causes are as follows:</p> <p>(1) The user ID or password is incorrect.</p> <p>(2) The specified administrator does not have permission to operate File Services Manager.</p> <p>(3) The account of the specified administrator is locked.</p> <p>(4) The login authentication function is temporarily disabled.</p> <p>When connected to Device Manager on another server:</p> <p>(5) A failure occurs on the Device Manager network.</p> <p>(6) Hitachi Command Suite Common Component on the Device Manager side is not running.</p> <p>(O)</p> <p>(1) Check the user ID and password, and enter them again.</p> <p>(2) Revise the administrator's permissions as necessary.</p> <p>(3) Unlock the account of the specified administrator.</p> <p>(4) Wait a while, and then retry the operation.</p> <p>(5) Check the settings and status of the network connecting to Device Manager.</p> <p>(6) Confirm that Hitachi Command Suite Common Component on the Device Manager side is running.</p> <p>If the error occurs again, acquire the management server log files, and then contact maintenance personnel.</p>
KAQM19108-E	Enter your user ID.	<p>The user ID is not specified.</p> <p>(O)</p> <p>Enter your user ID.</p>
KAQM19109-E	Enter your password.	<p>The password is not specified.</p> <p>(O)</p> <p>Enter your password.</p>
KAQM19110-E	An invalid parameter was specified. (<i>invalid-parameter-list</i>)	<p>(O)</p> <p>Check the field(s) that are displayed in the red frame, and then re-enter the correct parameter(s).</p>

Message ID	Message	Description and Action
KAQM19112-E	The operation has failed.	<p>The object has already been deleted by another user or from another dialog box.</p> <p>(O)</p> <p>Select the target resource from the explorer menu or refresh the tree. If this message is displayed after opening the screen from Device Manager, delete the duplicate file servers with older refresh dates, and then send the configuration information from File Services Manager to Device Manager. Retry the operation, as necessary.</p>
KAQM19113-E	Access to the database used by the File Services Manager server is blocked. A problem has been detected in Common Component. Contact your server administrator.	<p>The database might not be running.</p> <p>(O)</p> <p>The database might not be running, so execute the <code>hcmdssrv /status</code> command, and then check whether the KAPM06440-I message is output. For information about commands, see the Help. If you cannot resolve the problem, acquire the management server log files, and then contact maintenance personnel.</p>
KAQM19114-E	A screen transition failed.	<p>A temporary error occurred, or the GUI operation might have caused an invalid screen transition.</p> <p>(O)</p> <p>Close the dialog box. Make sure the latest information is displayed, and then perform the operation again, if necessary. If the error occurs again, restart File Services Manager server, and then try again. If the error occurs again, acquire all the log files and the management server log files, and then contact maintenance personnel.</p>
KAQM19115-E	A screen transition failed.	<p>A temporary error occurred, or the GUI operation might have caused an invalid screen transition.</p> <p>(O)</p> <p>Refresh the processing node, and check the latest information.</p> <ul style="list-style-type: none"> • If the physical node is in the Offline status, start the node from the Cluster Management dialog box. • If a resource group was failed over, fail back the resource group. • If a virtual server was failed over, fail back the virtual server.

Message ID	Message	Description and Action
		<ul style="list-style-type: none"> If the system version of the physical node is not the most up to date, try to perform an update installation for the physical node again.

KAQM19536-I	CIFS user authentication for the physical node (<i>physical-node-name</i>) has been set up. (result = <i>result</i> , message ID = <i>message-ID</i>)	No action is required.
KAQM19537-I	The OS for the physical node (<i>physical-node-name</i>) has restarted. (result = <i>result</i> , message ID = <i>message-ID</i>)	No action is required.
KAQM19538-I	The cluster for the processing node (<i>processing-node-name</i>) has started. (result = <i>result</i> , message ID = <i>message-ID</i>)	No action is required.
KAQM19539-I	The resource groups for the processing node (<i>processing-node-name</i>) have started. (result = <i>result</i> , message ID = <i>message-ID</i>)	No action is required.
KAQM19540-I	A test user and test share for the processing node (<i>processing-node-name</i>) have been created. (result = <i>result</i> , message ID = <i>message-ID</i>)	No action is required.
KAQM19541-I	A health check has completed on <i>processing-node-name</i> .	No action is required.
KAQM19548-I	The WORM properties have been edited. (processing node	No action is required.

Message ID	Message	Description and Action
	name = <i>processing-node-name</i> , file system name = <i>file-system-name</i>)	
KAQM19549-I	The HCP- <i>system-name</i> has been deleted.	No action is required.
KAQM19551-I	A license (<i>license-name</i>) has been activated on the physical node (<i>physical-node-name</i>). (result = <i>result</i> , message ID = <i>message-ID</i>)	No action is required.
KAQM19552-I	The cluster configuration for the processing node (<i>processing-node-name</i>) has been defined. (result = <i>result</i> , message ID = <i>message-ID</i>)	No action is required.
KAQM19553-I	NFS user settings for the processing node (<i>processing-node-name</i>) have been set up. (result = <i>result</i> , message ID = <i>message-ID</i>)	No action is required.
KAQM19554-I	The processing node (<i>processing-node-name</i>) has been refreshed. (result = <i>result</i> , message ID = <i>message-ID</i>)	No action is required.
KAQM19555-I	The proxy server settings for processing node <i>processing-node-name</i> have been completed.	No action is required.
KAQM19556-I	The proxy server settings for processing node <i>processing-node-name</i> have been deleted.	No action is required.
KAQM19557-I	The proxy server settings for processing node <i>processing-node-name</i> have been refreshed.	No action is required.
KAQM19558-I	No storage system are available for the operation.	No storage system are available for the operation. (O) Register an available storage system into HFSM, and then use this function.
KAQM19559-I	The HCP settings for the processing node <i>processing-node-name</i> were completed.	No action is required.
KAQM19560-I	A cache resident policy (<i>cache-resident-policy-name</i>) was added to the file system <i>file-system-name</i> .	No action is required.

Message ID	Message	Description and Action
KAQM19561-I	A cache resident policy (<i>cache-resident-policy-name</i>) for the file system <i>file-system-name</i> was edited.	No action is required.
KAQM19562-I	A cache resident policy (<i>cache-resident-policy-name</i>) for the file system <i>file-system-name</i> was deleted. (result = <i>result</i> , message ID = <i>message-ID</i>)	No action is required.
KAQM19563-I	The automatic assignment of LUs finished.	No action is required.
KAQM19701-E	A processing node cannot be registered. (specified management IP address = <i>specified-management-IP-address</i> , specified management IP address of the other node = <i>specified-management-IP-address-of-the-other-node</i>)	The cluster status is not the same for the nodes specified by the IP addresses. (O) Check the specified IP addresses, and then retry the operation.
KAQM19702-E	Registration of a processing node failed. (specified management IP address = <i>specified-management-IP-address</i>)	A management IP address has not been specified for the other node yet, even though a cluster has not been defined for the node with the specified management IP address. (O) Specify a management IP address for both nodes.
KAQM19703-E	Registration of a processing node failed. (specified management IP address = <i>specified-management-IP-address</i>)	The specified node is not a product of the selected type. (O) Retry the operation by corrected type.
KAQM19704-E	Modification of a processing node failed. (specified management IP address = <i>specified-management-IP-address</i>)	Type of specified node is different from Node to be edited. (O) Check the type of the specified node. If change the type of the node, add Processing Node again after deleting Processing Node.
KAQM19705-E	An attempt to update the processing node information failed. (processing node name = <i>processing-node-name</i>)	The node type of the specified node is different from the node type of the node managed by HFSM. (O) Delete the processing node, and then add it again.

Message ID	Message	Description and Action
KAQM19706-E	The specified LUs cannot be used. (LDEV numbers = <i>LDEV-numbers</i>)	The database information might not be up-to-date, or a specified LU is not recognized by a node. (O) Refresh the system, and then check the information about the specified volume. If the volume does not exist, revise the following: <ul style="list-style-type: none"> • The connection between the storage system and the node, and the path configuration • The storage system volume settings
KAQM19707-E	The operation has failed.	The file system has not been mounted in a read-write status. (O) If necessary, mount the file system so that it has read-write status, and then retry the operation.
KAQM19708-E	The operation has failed.	The file cannot be downloaded because cache resident processing has not yet been executed. (O) Confirm the following, and then retry the operation: <ol style="list-style-type: none"> (1) The file system has been mounted in a read-write state. (2) A cache resident policy has been added. (3) Cache resident processing has been executed.
KAQM19709-E	The file download failed.	An error occurred while transferring or saving data. (O) Confirm that you have the write permission for the save location, and that there is enough free space at the save location, refresh the screen, and then retry the operation. If the error occurs again, then the file size might be over 100 MB. A command can be used to collect the information.
KAQM19710-E	The automatic assignment of LUs failed.	There is one or more LUs that cannot be assigned to volume groups. (O) From [Check For Errors], follow the instructions in the message output to the Management log file

Message ID	Message	Description and Action
		(management.log) to resolve the problem.
KAQM19711-E	The file download failed.	<p>Possible causes are as follows:</p> <ul style="list-style-type: none"> An error occurred while transferring or saving data. The file to download does not exist. <p>(O)</p> <p>Confirm that you have the write permission for the save location, and that there is enough free space at the save location, and then retry the operation.</p>
KAQM19712-W	OS boot processing is not finished. Please wait until it is finished.	<p>Operations might not be performed properly because OS boot processing is not finished.</p> <p>(O)</p> <p>Wait a while, and then refresh the system information. Perform the intended operations only after confirming that this message is not displayed. If this message is displayed repeatedly, acquire all the log files and the management server log files, and then contact maintenance personnel.</p>
KAQM19713-E	The file transfer failed.	<p>An invalid file was specified.</p> <p>(O)</p> <p>Specify a valid file.</p>
KAQM19714-E	You cannot perform this operation, because the node is managed via the front-end LAN.	<p>You can update the software only if the node is managed via the management LAN.</p> <p>(O)</p> <p>Connect the management server and the management console to the management LAN. In Edit Node, change the management IP address to the IP address of <code>mng0</code>, and then execute the operation.</p>
KAQM19800-E	The operation has failed.	<p>The displayed information has not been updated.</p> <p>(O)</p> <p>Execute refresh processing and, if necessary, retry the operation.</p>
KAQM19801-E	The operation has failed.	<p>The target processing node is not supported by the File Services Manager server.</p> <p>(O)</p>

Message ID	Message	Description and Action
		Check the version of the File Services Manager server, and then install the appropriate version.
KAQM19803-E	Processing failed because the specified processing node does not support this functionality.	The specified processing node does not support this functionality. (O) Make sure the model of the specified processing node is correct.
KAQM19804-E	The operation has failed.	Information required for processing could not be acquired, because communication with the physical node could not be established when the processing node was registered. (O) Check the status of the physical node. Remove the cause of the error, execute refresh processing, and then retry the operation.
KAQM19807-E	An attempt to edit the file system has failed. (processing node name = <i>processing-node-name</i> , file system name = <i>file-system-name</i>)	The specified file system does not support this function. (O) Check the file system operation function.
KAQM19808-E	Acquisition of the node status after the operation failed.	Acquisition of node information failed. (O) Refresh the system information, and then check the status of the cluster, node, and resource group. If an error occurs while the system information is being refreshed, acquire all the log data and management server log files, and then contact maintenance personnel.

KAQM20 messages

This section explains messages that have a message ID beginning with KAQM20, and the actions to be taken if such messages appear.

Table 5-14 KAQM20 messages

Message ID	Message	Description and Action
KAQM20004-E	The node was not found.	The displayed information is not up-to-date. The node has already been deleted. (O)

Message ID	Message	Description and Action
		Select the target resource from the explorer menu or refresh the tree.
KAQM20005-E	The file system was not found.	The displayed information is not up-to-date. The file system has already been deleted. (O) Select the target resource from the explorer menu or refresh the tree.
KAQM20006-E	The file system has already been mounted.	The displayed information is not up-to-date. The file system has already been mounted. (O) Select the target resource from the explorer menu or refresh the tree.
KAQM20007-E	The file system has already been unmounted.	The displayed information is not up-to-date. The file system has already been unmounted. (O) Select the target resource from the explorer menu or refresh the tree.
KAQM20008-E	The file share was not found.	The displayed information is not up-to-date. The file share has already been released. (O) Select the target resource from the explorer menu or refresh the tree.
KAQM20009-E	The window information does not match the database information.	The displayed information is not up-to-date. (O) Close the dialog box, and then try again.
KAQM20030-E	An error occurred during creation of the LU.	The LU creation result could not be acquired. (O) Execute refresh processing, and check whether the LU has been created. If it has not been created, try again. If the error occurs again, acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM20031-E	The LU could not be created because the LU auto-creation function does not support the processing node.	The LU auto-creation function does not support the processing node. (O) Check whether the target processing node is correct.

Message ID	Message	Description and Action
KAQM20032-E	The LU auto-creation operation timed out. (timeout value (sec) = <i>time-out-value</i> (sec))	The LU auto-creation function did not respond. (O) Execute refresh processing, and check whether the LU has been created. If it has not been created, try again. If the error occurs again, acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM20034-E	An attempt to perform processing for the specified LU failed because another administrator was accessing it. (LU name = <i>LU-name</i>)	The specified LU is being operated by another administrator. (O) Specify another LU, and then try again.
KAQM20035-E	The LU was created but an attempt to update the database has failed. (LU name = <i>LU-name</i>)	The information for the created LU has not been updated because the information in the window is not up-to-date. (O) Execute refresh processing, and then retry the operation by using the created LU.
KAQM20036-E	An error occurred during creation of the LU.	A system LU could not be accessed. Possible causes are as follows: <ul style="list-style-type: none"> • There is a problem with the FC cable connection. • There is a problem with the FC path. • An attempt to communicate with the physical node has failed. • The maintenance mode is set to the function used to assign user LUs. (O) Check the connection statuses of the FC cables. If the connection statuses are normal, check that the statuses of the FC paths are normal. If the FC paths are normal, check the status of the physical node, and then remove the cause of the problem. After that, execute refresh processing, and check whether the LU has been created. If it has not been created, make sure that the function used to assign user LUs is set to the normal operating mode. If the function is set to maintenance mode, change it to the normal operating mode. After that, execute refresh processing, and if the LU has not been created, retry the operation.

Message ID	Message	Description and Action
		If the problem is still not resolved, acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM20037-E	An LU could not be created.	Possible causes are as follows: <ul style="list-style-type: none"> • No LU numbers (LUNs) are available for LU auto creation. • The maximum number of LUs that can be auto created has already been reached. (O) Perform a refresh operation, and then check the LU settings. If LUs can be created, use Hitachi Storage Navigator Modular 2 or Device Manager to create LUs.
KAQM20038-E	An LU could not be created.	A system LU could not be accessed. Possible causes are as follows: <ul style="list-style-type: none"> • There is a problem with the FC cable connection. • There is a problem with the FC path. • The other physical node has not started. (O) Check the connection statuses of the FC cables. If the connection statuses are normal, check that the statuses of the FC paths are normal. If the FC paths are normal, check the status of the physical node, and then remove the cause of the problem. After that, if necessary, retry the operation. If the problem cannot be resolved, acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM20039-E	An LU could not be created.	The information required to make the LU could not be acquired. Possible causes are as follows: <ul style="list-style-type: none"> • There is a problem with the FC cable connection. • There is a problem with the FC path. • There are no targets in the storage system that can be used for creating LUs. • The other physical node has not started. (O)

Message ID	Message	Description and Action
		Check the connection statuses of the FC cables. If the connection statuses are normal, check that the statuses of the FC paths are normal. If the FC paths are normal, make sure that at least one user LU is assigned to the target. If there are no problems with the target, check the status of the physical node, and then remove the cause of the problem. After that, if necessary, retry the operation. If the problem cannot be resolved, acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM20040-E	The operation could not be performed because the processing node is being refreshed. (processing node name = <i>processing-node-name</i>)	The operation could not be performed because the processing node is being refreshed. (O) After the refresh processing has finished, try again. If the error continues to occur, restart File Services Manager server, and then try again.
KAQM20041-E	An attempt to perform an operation in the processing node failed because another administrator is performing an operation in the node. (processing node name = <i>processing-node-name</i>)	The operation could not be performed for the processing node because it is being performed by another administrator. (O) Wait for a while, and then try again. If the error continues to occur, restart File Services Manager server, and then try again.
KAQM20042-E	File sharing cannot be performed because a license has not been registered.	Licenses for the CIFS and NFS protocols have not been registered. (O) Check whether the license has been registered. If the license has been registered, refresh the processing node, and then try again.
KAQM20043-E	File sharing cannot be performed because a license has not been registered.	Licenses for the CIFS and NFS protocols have not been registered. (O) Refresh the processing node or the license information, and then check whether the license has been registered. If the license has been registered, try to share files again.
KAQM20044-E	Installation of the system software has failed.	An error occurred while transferring data to the management server. There might not be enough free space on the

Message ID	Message	Description and Action
		management server to save the installation files. (O) Ensure there is enough free space, and then reattempt the installation. If the error occurs again, acquire the management server log files, and then contact maintenance personnel.
KAQM20045-E	Installation of the system software has failed.	The system software installation failed. Either the node or the resource group is not in a status where the system software can be installed. (O) Execute refresh processing, and then check the status of the node or resource group. After removing the problem, reattempt the installation.
KAQM20046-E	Installation of the system software has failed.	The system software installation timed out. (O) Wait a while, perform refresh processing, and then confirm that the system software has been updated. If node information could not be acquired, check the boot status of the OS. If the OS is not running, start the OS and then retry the installation of the system software. If the problem cannot be resolved, acquire all the log files and the management server log files, and then contact maintenance personnel. See online Help for a list of the log files.
KAQM20048-W	The processing node is already running. (processing node name = <i>processing-node-name</i>)	The processing node is already running. (O) Execute refresh processing, and then check the status of the processing node.
KAQM20049-E	Start the processing node has failed. (processing node name = <i>processing-node-name</i>)	There might be a problem with the network between the management server and BMC, or an error might have occurred in BMC. (O) Check whether there is a problem in the network between the management server and BMC, and then try again. If the problem cannot be resolved, acquire all the log files and the management server log files, and then contact maintenance personnel.

Message ID	Message	Description and Action
KAQM20050-W	The specified property value is incorrect. The default value will be used. (property name = <i>property-name</i> , specified property value = <i>specified-property-value</i> , default value = <i>default-value</i>)	An invalid property value was specified, but processing was continued by using the default value. (O) Make sure the value is correct.
KAQM20055-W	The default value will be used because an attempt to read the properties file has failed.	An attempt to read the properties file has failed. (O) Make sure the properties file exists and that it can be read.
KAQM20057-W	An unknown property exists. (property name = <i>property-name</i> , property value = <i>property-value</i>)	An invalid property name was specified. The unknown property will be ignored. (O) Make sure the property is correct.
KAQM20061-E	An attempt to communicate with the physical node has failed.	An error occurred in the communication with the physical node. Processing of the startup of the processing node might not have completed. (O) Wait a while, and then refresh the system information. If the error continues to occur, acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM20063-E	The IP address is already registered. (IP address = <i>registered-IP-address</i> , processing node name = <i>name-of-the-processing-node-for-which-the-IP-address-is-set</i>)	The specified IP address is already set for a registered processing node. (O) If the specified processing node is already registered, use it. If the specified processing node has not yet been registered, confirm that the IP address will not cause any conflicts between the processing nodes, and then retry the operation.
KAQM20064-E	An attempt to delete the file system has failed. (processing node name = <i>processing-node-name</i> , file system name = <i>file-system-name</i>)	A file system that has a file share cannot be deleted. (O) Release the file shares in the file system.
KAQM20065-E	An attempt to expand the file system has failed. (processing node name = <i>processing-node-name</i> , file system name = <i>file-system-name</i>)	The file system cannot be expanded because it does not use a volume manager. (O)

Message ID	Message	Description and Action
		Back up the data in the file system, create another file system, and then restore the backed-up data in the created file system.
KAQM20066-E	An attempt to mount the file system has failed. (processing node name = <i>processing-node-name</i> , file system name = <i>file-system-name</i>)	The file system might have already been mounted, or it might have been blocked. (O) Select the target resource from the explorer menu or refresh the tree.
KAQM20067-E	An attempt to unmount the file system has failed. (processing node name = <i>processing-node-name</i> , file system name = <i>file-system-name</i>)	This file system has already been unmounted. (O) Select the target resource from the explorer menu or refresh the tree.
KAQM20068-E	An attempt to add a processing node has failed.	The maximum number of processing nodes has already been registered. (O) Register the processing node in the File Services Manager server on another machine.
KAQM20069-E	An attempt to add a file share has failed. (processing node name = <i>processing-node-name</i> , file system name = <i>file-system-name</i>)	The file system to be used for adding the file share has been unmounted. (O) Mount the file system.
KAQM20070-E	The operation was cancelled because the processing limit of the management server has been reached.	The processing limit of the management server has been reached. (O) Wait for the processing of other operations to finish, and then try again.
KAQM20071-I	The refresh processing has started. (processing node name = <i>processing-node-name</i>)	No action is required.
KAQM20072-I	The refresh processing has been finished. (processing node name = <i>processing-node-name</i>)	No action is required.
KAQM20073-E	Refresh processing failed while the File Services Manager server was starting. (processing node name = <i>processing-node-name</i>)	There is no physical node in the Online status, or communication with the physical node failed. (O) Make sure communication with the physical node is possible. Then, check the status of the physical node to remove the cause of the error.

Message ID	Message	Description and Action
KAQM20074-E	The operation was cancelled because there were no online physical nodes.	There are no physical nodes online. (O) Check the status of the physical node, fix the cause of the error, and then try again.
KAQM20075-E	An attempt to perform operations for the processing node has failed. (processing node name = <i>processing-node-name</i>)	Duplicate information was returned from both physical nodes because failover processing was being executed at the processing node. (O) Make sure operations for the processing node have finished, and then try again.
KAQM20076-E	The LU cannot be created.	An attempt to acquire the IP addresses of the controllers has failed. (O) In the [Storage system Registration] tab in the [Edit Node] dialog box, make sure that the IP addresses of CTL0 and CTL1 are correctly set.
KAQM20078-E	An attempt to edit the file share has failed. (processing node name = <i>processing-node-name</i> , share name = <i>share-name</i>)	The file system used for the file share might have already been blocked. (O) Select the target resource from the explorer menu or refresh the tree.
KAQM20080-E	An attempt to expand the file share has failed. (processing node name = <i>processing-node-name</i> , share name = <i>share-name</i>)	The file system used for the file share cannot be expanded because it does not use a volume manager. (O) Back up the data of the file share, create another file share, and then restore the backed-up data in the created file share.
KAQM20081-E	An attempt to load the system file has failed. (file name = <i>file-name</i>)	An attempt to load the system file has failed. (O) Acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM20095-E	An attempt to add a file share has failed. (processing node name = <i>processing-node-name</i> , file system name = <i>file-system-name</i>)	The file system might have already been blocked. (O) Select the target resource from the explorer menu or refresh the tree.
KAQM20101-E	The share cannot be added because the share name is	The displayed information might not be up-to-date. The share name is already in use.

Message ID	Message	Description and Action
	already in use. (share name = <i>share-name</i>)	(O) Select the target resource from the explorer menu or refresh the tree, and check the new information. After that, specify another share name, and then try again.
KAQM20106-E	The operation could not be performed because another administrator is performing an operation in the file share. (name = <i>name</i> , share name = <i>share-name</i>)	The file share is being operated by another administrator. (O) Wait for the processing of the other administrator to finish, and then try again.
KAQM20107-E	The settings cannot be changed for the selected file share.	Quota is not enabled in the file system for which the selected file share is being created. (O) Release the file share, and then re-mount the file system by using the setting that enables Quota. After that, re-create the file share.
KAQM20108-E	Capacity management cannot be enabled for the selected file share.	When the mount point of the file system is shared, capacity management cannot be enabled. (O) To expand the capacity, expand the file system.
KAQM20109-E	Communication with a physical node or virtual server timed out.	Possible causes are as follows: <ul style="list-style-type: none"> • There is a problem with the network that the physical node or virtual server is on. • A large number of files in the directory set for capacity management has slowed processing. • Frequent accesses to the directory set for capacity management have slowed processing. (O) Check the Management log file (<i>management.log</i>). If the beginning of the settings for share quota is not output to the Management log file (<i>management.log</i>) or if output cannot be confirmed, check whether there is a problem in the network, and then retry the operation. If the problem cannot be resolved, acquire all log files and management server log files, and then contact maintenance personnel.

Message ID	Message	Description and Action
		<p>If the beginning of the settings for share quota is output, processing will be executed normally. Wait until a message indicating that settings are complete is output. If this takes a long time, ask the end user to temporarily discontinue access to the directory.</p> <p>If the operation terminates abnormally, recover the settings for share quota. For details about recovering settings for share quota, see the Help.</p>
KAQM20110-E	The capacity management settings cannot be changed for the selected file share.	<p>The setting cannot be changed because the capacity for all second-level subdirectories in the selected file share is managed.</p> <p>(O)</p> <p>Use a command to remove the subtree quota settings for all second-level subdirectories, and then retry the operation.</p>
KAQM20111-I	<p>The share "<i>share-name</i>" at <i>physical-node-host-name</i> of <i>processing-node-name</i> has been released.</p> <p>Files in the share were not deleted.</p> <p>To end operation of the share that uses the namespace, use a command to delete the target directory.</p>	No action is required.
KAQM20400-E	The file system name is already in use. (file system name = <i>file-system-name</i>)	<p>The displayed information might not be up-to-date. The file system name is already in use.</p> <p>(O)</p> <p>Select the target resource from the explorer menu or refresh the tree, and check the new information. After that, specify another file system name, and then try again.</p>
KAQM20401-E	The operation could not be performed because another administrator was performing an operation in the file system. (name = <i>name</i> , file system name = <i>file-system-name</i>)	<p>The file system is being operated by another administrator.</p> <p>(O)</p> <p>Wait for the processing of the other administrator to finish, and then try again.</p>
KAQM20402-E	An attempt to modify the WORM properties has failed. (processing node name = <i>processing-node-name</i> , file	<p>The file system has not been mounted in a read-write status.</p> <p>(O)</p>

Message ID	Message	Description and Action
	system name = <i>file-system-name</i>)	Select the target resource from the explorer menu or refresh the tree, and check the new information. If necessary, mount the file system so that it has read-write status, and then retry the operation.
KAQM20500-E	Deletion of a differential-data snapshot has failed. (differential-data snapshot name = <i>differential-data-snapshot-name</i>)	A differential-data snapshot for which file sharing is set cannot be deleted. (O) Release any file shares, and then try again.
KAQM20501-E	Creation of a differential-data snapshot has failed.	The number of created differential-data snapshots has reached the maximum number of reserved generations. (O) Delete unnecessary differential-data snapshots, and then try again.
KAQM20502-E	A mount point does not exist for the specified differential-data snapshot. (differential-data snapshot name = <i>differential-data-snapshot-name</i>)	The displayed information is not up-to-date. (O) Refresh file snapshots information, and then check the status of the differential-data snapshot.
KAQM20503-E	The mount point of the specified differential-data snapshot is being used by another function. (differential-data snapshot name = <i>differential-data-snapshot-name</i> , mount point name of differential-data snapshot = <i>mount-point-name-of-differential-data-snapshot</i>)	The displayed information is not up-to-date. The mount point of the specified differential-data snapshot is being used by another function. (O) If this message was output when a differential-data snapshot was mounted, execute refresh processing, specify a different mount point name, and then try again. If this message was output when a differential-data snapshot was unmounted, execute refresh processing, and check the status of the differential-data snapshot.
KAQM20504-E	An NFS share or a CIFS share is created in the specified differential-data snapshot. (differential-data snapshot name = <i>differential-data-snapshot-name</i> , mount point name of differential-data snapshot = <i>mount-point-name-of-differential-data-snapshot</i>)	The displayed information is not up-to-date. An NFS share or a CIFS share is created in the specified differential-data snapshot. (O) Execute refresh processing, delete the NFS or CIFS share, and then re-execute.
KAQM20505-E	The mount point information of the specified differential-	The displayed information is not up-to-date.

Message ID	Message	Description and Action
	data snapshot is not up-to-date. (differential-data snapshot name = <i>differential-data-snapshot-name</i>)	(O) Execute refresh processing, and then check the status of the differential-data snapshot.
KAQM20506-E	An attempt to unmount or hide the specified differential-data snapshot has failed. (differential-data snapshot name = <i>differential-data-snapshot-name</i> , mount point name of differential-data snapshot = <i>mount-point-name-of-differential-data-snapshot</i>)	An attempt to unmount or hide the specified differential-data snapshot has failed. This message might also be output when a cluster, node, resource group, or virtual server is not running normally. (O) Check the cluster, node, and resource group status. Alternatively, execute refresh processing, and then check the virtual server status. If the statuses are normal and you still cannot identify the cause of the problem, acquire all the log data, and then contact maintenance personnel.
KAQM20507-E	An attempt to unmount the differential-data snapshot has failed. (differential-data snapshot name = <i>differential-data-snapshot-name</i> , mount point name of differential-data snapshot = <i>mount-point-name-of-differential-data-snapshot-name</i>)	A cluster, node, resource group, or virtual server might not be running normally, or an error occurred. (O) Check the cluster, node, and resource group status. Alternatively, execute refresh processing, and then check the virtual server status. If the statuses are normal and you still cannot identify the cause of the problem, acquire all the log data, and then contact maintenance personnel.
KAQM20508-E	No operation other than unmounting the differential-data snapshot in which an error occurred can be executed, because an error occurred during mount or unmount processing for the differential-data snapshot. (differential-data snapshot name = <i>differential-data-snapshot-name</i> , mount point name of differential-data snapshot = <i>mount-point-name-of-differential-data-snapshot-name</i>)	No operation other than unmounting the differential-data snapshot in which an error occurred can be executed, because an error occurred during mount or unmount processing for the differential-data snapshot. (O) Specify the mount point name for the differential-data snapshot in which an error occurred, and then execute the unmount of the differential-data snapshot. If the error occurs repeatedly, acquire all the log data, and then contact maintenance personnel.
KAQM20510-E	An attempt to mount a differential-data snapshot has failed. (differential-data snapshot name = <i>differential-data-snapshot-name</i>)	The differential-data snapshot has already been mounted. (O) Select the target resource from the explorer menu or refresh the tree, and

Message ID	Message	Description and Action
		then check the differential-data snapshot information.
KAQM20514-E	Some of the resources to be used for the requested processing are being used by another user. (differential-data snapshot name = <i>differential-data-snapshot-name</i>)	Some of the resources to be used for processing are being used exclusively by another user, or the node being used exclusively has stopped. (O) Wait a while, and then re-execute. If the node stops during processing, wait about 15 minutes or boot the stopped node.
KAQM20515-E	Another user is using a resource required for status-display processing. (differential-data snapshot name = <i>differential-data-snapshot-name</i>)	Another user has exclusive control of a resource required for status-display processing, or a node has stopped. (O) Wait a while, and then refresh file snapshots information. If a processing node has stopped, wait about 15 minutes or boot the stopped node.
KAQM20518-E	An attempt to set up file snapshots failed. (file system name = <i>file-system-name</i>)	The specified file system is already using file snapshots or the HFRR functionality. (O) Select the target resource from the Explorer menu or refresh the tree, and then check which function is used by the file system.
KAQM20520-E	An attempt to edit file snapshots settings failed. (file system name = <i>file-system-name</i>)	The specified file system is not using file snapshots or the HFRR functionality. (O) Check the functionality that the file system is using.
KAQM20521-E	An attempt to disable file snapshots failed. (file system name = <i>file-system-name</i>)	The specified file system is not using file snapshots. (O) Check the functionality that the file system is using.
KAQM20522-E	The differential-data snapshot name is already in used. (differential-data snapshot name = <i>differential-data-snapshot-name</i>)	The displayed information is not up-to-date. The differential-data snapshot name has already been used. (O) Select the target resource from the explorer menu or refresh the tree, and then check the differential-data snapshot information.

Message ID	Message	Description and Action
KAQM20523-E	The differential-data snapshot was not found.	The displayed information is not up-to-date. The differential-data snapshot has already been deleted. (O) Select the target resource from the explorer menu or refresh the tree, and then check the differential-data snapshot information.
KAQM20525-E	An attempt to unmount a differential-data snapshot has failed. (differential-data snapshot name = <i>differential-data-snapshot-name</i>)	The differential-data snapshot has already been unmounted. (O) Check the differential-data snapshot status.
KAQM20526-E	A timeout has occurred during the resource operation. (differential-data snapshot name = <i>differential-data-snapshot-name</i>)	The system might be in the state of a high load. Otherwise, another resource operation might be executed. (O) Wait a while, and then try again. If this message is output repeatedly, acquire all the log data, and then contact maintenance personnel.
KAQM20530-E	An attempt to edit file snapshots settings failed. (file system name = <i>file-system-name</i>)	Processing cannot continue because the differential-data storage device is not able to edit file snapshots. (O) Refresh file snapshots information, check the status of the differential-data storage device, and then retry the operation.
KAQM20532-E	File snapshots cannot be set up in the specified file system.	File snapshots cannot be set up because the specified file system does not use a volume manager. (O) Execute refresh processing, specify a file system that is using a volume manager, and then retry the operation.
KAQM20536-E	The operation could not be performed because another administrator is using the file system or a file system resource. (file system name = <i>file-system-name</i>)	Another administrator is using the file system or a file system resource. (O) Wait for the other administrator to finish, and then try again.
KAQM20537-E	The controller information could not be acquired.	An error occurred during acquisition of the controller information. (O) If you are not using the LU auto-creation function or the Hitachi Storage Navigator Modular 2 linkage function, without specifying the IP address of

Message ID	Message	Description and Action
		the controller, register the processing node again. If you are using the LU auto-creation function or the Hitachi Storage Navigator Modular 2 linkage function, specify the IP address of the controller, and then register the processing node again. If an error still occurs, acquire all the log files and management server log files, and contact maintenance personnel.
KAQM20538-E	Processing to acquire the controller information timed out. (timeout value (sec) = <i>Timeout-value (sec)</i>)	Processing to acquire the controller information timed out. (O) There might be a temporary error. If you are not using the LU auto-creation function or the Hitachi Storage Navigator Modular 2 linkage function, without specifying the IP address of the controller, register the processing node again. If you are using the LU auto-creation function or the Hitachi Storage Navigator Modular 2 linkage function, specify the IP address of the controller, and then register the processing node again. If an error still occurs, acquire all the log files and management server log files, and contact maintenance personnel.
KAQM20545-E	Failed to change the mount setting of differential-data snapshots.	The mount setting cannot be changed to on-demand mounting, because the differential-data snapshots that were automatically created are mounted. (O) After executing refresh processing, unmount the differential-data snapshots that were automatically created, and then change the mount setting again.
KAQM20546-E	Failed to mount the differential-data snapshot.	Differential-data snapshots that were automatically created cannot be mounted, because on-demand mounting is enabled. (O) To access differential-data snapshots from CIFS clients by using Volume Shadow Copy Service, differential-data snapshots do not need to be mounted. To access differential-data snapshots without using Volume Shadow Copy Service, change the mount setting, and then mount them again.
KAQM20700-E	An error occurred during communication with the	An error occurred during communication with the physical node

Message ID	Message	Description and Action
	physical node or virtual server. (result code = <i>information-acquisition-return-code</i>)	or virtual server. A temporary error might have occurred. (O) Try again, because the error might be temporary. If an error continues to occur, acquire the management server log files, and then contact maintenance personnel.
KAQM20701-E	An error occurred during communication with the physical node or virtual server. (result code = <i>information-registration-return-code</i>)	An error occurred during communication with the physical node or virtual server. A temporary error might have occurred. (O) Try again, because the error might be temporary. If an error continues to occur, acquire the management server log files, and then contact maintenance personnel.
KAQM20702-E	An internal error occurred.	An attempt to create authentication data has failed. (O) Acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM20703-E	Processing failed because another administrator is performing an operation on the license. (license name = <i>license-name</i>)	Another administrator is performing an operation on the license. (O) Wait for the other administrator to finish the operation on the license, and then try again.
KAQM20705-E	<i>processing-name</i> processing failed because a <i>license-name</i> license is not set.	A license required for processing is not available. (O) Set a license, and then retry the operation.
KAQM20706-E	The operation has failed.	The hardware does not support this function. (O) See the manual corresponding to the version of the processing node in use.
KAQM20707-E	A <i>license-name</i> license is required to use the <i>function-name</i> functionality.	A required license is not available. (O) To use this function, make sure that a required license is available.
KAQM20708-E	This function is not supported on the registered processing node.	This function is not supported on the registered processing node. (O)

Message ID	Message	Description and Action
		See the manual corresponding to the version of the processing node in use.
KAQM20709-E	Processing ended with the <i>message-ID</i> warning message.	The warning message was output by the node startup processing. (O) Follow the action for the warning message. The node might be running. Check the status of the node and resource group, and then perform a failback.
KAQM20801-E	The specified IP address is already being used. (IP address = <i>IP-address</i>)	The displayed information might not be up-to-date. The IP address is already in use. (O) Specify another IP address, and then try again.
KAQM20802-E	Deletion of a virtual server has failed. (virtual server name = <i>virtual-server-name</i>)	The virtual server might not be stopped. (O) Check the status of the virtual server, remove the cause of the error, and then retry the operation.
KAQM20803-E	An attempt to edit information about the virtual server has failed. (virtual server name = <i>virtual-server-name</i>)	Information required for processing could not be acquired. (O) Execute refresh processing, and then try again. If the error occurs again, acquire all log files and management server log files, and then contact maintenance personnel.
KAQM20804-E	Creation of a virtual server has failed.	There are no usable LUs. (O) Prepare usable LUs, and then try again.
KAQM20807-E	Creation of a virtual server has failed.	Information necessary for processing could not be acquired. (O) Execute refresh processing, and then try again. If the error occurs again, acquire all log files and management server log files, and then contact maintenance personnel.
KAQM20808-E	The specified operation could not be performed because the virtual server is being refreshed. (virtual server name = <i>virtual-server-name</i>)	The operation could not be performed because the virtual server is being refreshed. (O)

Message ID	Message	Description and Action
		Wait until refresh processing has finished, and then try again.
KAQM20809-E	Processing has failed because another administrator is performing operations on the specified physical node or virtual server. (physical node name or virtual server name = <i>physical-node-name-or-virtual-server-name</i>)	Processing has failed because another administrator is performing operations on the physical node or virtual server. (O) Wait a while, and then try again.
KAQM20810-W	The specified operation was completed. File shares that did not belong to the file system were ignored. (virtual server name = <i>virtual-server-name</i> , number of ignored file shares = <i>number-of-ignored-file-shares</i>)	There is a file share that does not belong to any file system. The file system might have been deleted, or a failover might be executing. (O) If the file system has been deleted, use commands to delete the ignored file shares. Alternatively, wait a while, and then execute refresh processing.
KAQM20811-E	Mgmt. LAN IP address is already in use. (IP address = <i>IP-address</i>)	The Mgmt. LAN IP address is already in use. (O) Please confirm Mgmt. LAN IP address after executing the refresh processing. specify another Mgmt. LAN IP address, and execute it again.
KAQM20812-E	An attempt to fail over or fail back the virtual server has failed. (virtual server name = <i>virtual-server-name</i>)	The virtual server might be stopped. (O) Check the status of the virtual server, remove the cause of the error, and then try again.
KAQM20813-E	The operation has failed.	The operation could not be performed because the node status is not "UP. " (O) To check the node status, click [Cluster Management]. Remove the cause of the error, execute refresh processing, and then retry the operation.
KAQM20814-E	The operation has failed.	Communication with a physical node has failed. (O) Make sure the physical node is running. If necessary, revise the network settings. Next, execute refresh processing, check the physical node status, and then retry the operation.

Message ID	Message	Description and Action
KAQM20815-W	Virtual server information was not updated.	Virtual server information was not updated because the node is not in the "UP" status. (O) To update virtual server information, click [Cluster Management], change the node status to "UP", and then refresh the information.
KAQM20816-E	An attempt to acquisition information about the virtual server has failed.	Communication with a physical node has failed. (O) Make sure the physical node is running. If necessary, revise the network settings. Then, execute refresh processing.
KAQM20817-E	Deletion of a virtual server has failed. (virtual server name = <i>virtual-server-name</i>)	A resource might be in use. (O) Check the status of the virtual server, remove the cause of the error, and then retry the operation.
KAQM20819-W	The refresh processing of virtual server was not able to be done. (virtual server name = <i>virtual-server-name</i>)	The status of the virtual server does not allow execution. (O) Check the status of the virtual server and, if necessary, try again.
KAQM20820-E	An attempt to fail over or fail back the virtual server has failed. (virtual server name = <i>virtual-server-name</i>)	Information required for processing could not be acquired. (O) Execute refresh processing, and then try again. If the error occurs again, acquire all log files and management server log files, and then contact maintenance personnel.
KAQM20821-E	An attempt to edit the virtual server information has failed (virtual server name = <i>virtual-server-name</i>)	A virtual server exists which is not in online status, offline status, or partial online status. (O) Perform the refresh operation, and then check the statuses of all the virtual servers. If the virtual servers are running abnormally, remove the cause of the problem, and then retry the operation.
KAQM20822-W	An attempt to communicate with the virtual server has failed. (virtual server name = <i>virtual-server-name</i>)	An IP address that can communicate with the management server is not set for the virtual server. (O)

Message ID	Message	Description and Action
		On a port used for communication with the physical node, set a virtual server IP address that can communicate with the management server via the same protocol. Check the network settings of the virtual server, remove any problems, and then retry the operation.

KAQM21 messages

This section explains messages that have a message ID beginning with KAQM21, and the actions to be taken if such messages appear.

Table 5-15 KAQM21 messages

Message ID	Message	Description and Action
KAQM21000-E	An option is invalid. (<i>arguments</i>)	The number of strings specified for arguments is not correct. (O) Correct the arguments.
KAQM21001-E	The specified argument is not a directory. (<i>name-of-invalid-argument = value-of-invalid-argument</i>)	The specified argument is not a directory. (O) Specify the directory in argument.
KAQM21002-E	This platform is not supported.	The command was executed on a platform not supported by File Services Manager server. (O) See online Help to check which platforms File Services Manager server supports.
KAQM21003-E	An I/O error occurred. (details: <i>details</i>)	An error occurred during I/O processing. Processing might have been executed by a user who does not have Administrator permissions. (O) Log in again as a user who has Administrator permissions. If an error occurs again, contact the maintenance personnel.
KAQM21004-I	<i>File-name</i> was not found.	No action is required.
KAQM21005-Q	New password:	No action is required.
KAQM21006-Q	Re-enter new password:	No action is required.

Message ID	Message	Description and Action
KAQM21007-I	The password was changed successfully.	No action is required.
KAQM21008-E	The length of the specified password is invalid.	The length of the specified password is invalid. (O) Specify a password that has a valid length.
KAQM21009-E	An invalid character has been specified.	An invalid character has been specified. (O) Specify valid characters only.
KAQM21010-E	The re-entered password does not match.	The re-entered password does not match. (O) Try again.
KAQM21011-E	An internal error occurred. Cause <i>cause</i> .	An attempt to change password has failed. (O) Acquire all the log files, and then contact maintenance personnel.
KAQM21012-I	The logs were collected successfully.	No action is required.
KAQM21013-E	An attempt to execute the log collection command (<i>hcmdsgetlogs</i>) has failed. (error code = <i>return-code-of-hcmdsggetlogs</i>)	There might not be enough free space for saving collected log files. (O) Ensure there is enough free space, and then try again. If an error occurs again, contact maintenance personnel.
KAQM21014-E	An attempt to delete the log collection directory has failed.	The directory might be in use. (O) Delete the directory manually, or execute the <i>hcmdsgetlogs</i> command manually by using another directory.
KAQM21015-E	An internal error occurred.	An attempt to collect logs has failed. (O) Contact maintenance personnel.
KAQM21016-I	Is it OK to delete <i>full-path-of-log_archive-directory</i> ? [Y/[N]]:	No action is required.
KAQM21017-Q	Performing this operation will reset the admin user's password. Are you sure you want to reset the password? (y/n)	No action is required.

Message ID	Message	Description and Action
KAQM21018-E	Processing failed.	A temporary error occurred. (O) Wait a while, and then retry the operation. If the error occurs repeatedly, acquire all the log files, and then contact maintenance personnel.
KAQM21019-E	The syntax is incorrect.	The syntax is incorrect. (O) Refer to the manual, specify the options correctly, and then retry the operation.
KAQM21020-Q	Performing this operation might cause some services to restart. Are you sure you want to perform this operation? (services = <i>service-name</i>) (y/n)	No action is required.
KAQM21021-Q	Performing this operation will reset the account settings for the user " <i>user-name</i> ". Are you sure you want to execute this operation? (y/n)	No action is required.
KAQM21022-Q	Performing this operation will unlock the account for the user " <i>user-name</i> ". Are you sure you want to execute this operation? (y/n)	No action is required.
KAQM21023-E	An argument specified for the option <i>option-whose-argument-is-specified-incorrectly</i> is invalid.	The argument specified for the indicated option is invalid. (O) Specify a valid value as described in Help.
KAQM21024-E	An attempt to start the <i>service-name</i> has failed.	An invalid file was specified. (O) Specify a valid file.
KAQM21025-E	The specified file does not exist in the home directory. (file name = <i>file-name</i>)	The specified file does not exist in the home directory. (O) Confirm whether the specified file exists in the home directory.
KAQM21026-E	The specified private key file and password do not match.	The specified file or password might be invalid. (O) Make sure the specified information is valid, and then retry the operation.

Message ID	Message	Description and Action
KAQM21027-E	The character string to be set in the certificate signing request file is too long.	The setting cannot be applied, because the total number of characters specified for the arguments of the following options exceeds the upper limit: --country --state-province --locality --organization --unit --common-name --email (O) Make sure that the total number of characters to be set in the certificate signing request file does not exceed the upper limit, and then try the operation again. For details about the total number of characters that can be specified, see the manual <i>CLI Administrator's Guide</i> .
KAQM21028-I	Usage: <i>command-syntax</i>	This message displays the format of the command. (O) If a syntax error occurs, check the format of the command, and then retry.
KAQM21029-E	A file with the same name as the specified file already exists in the home directory. (file name = <i>file-name</i>)	A file with the same name as the specified file already exists in the home directory. (O) Specify the name of a file that does not exist in the home directory.
KAQM21100-E	The operation has failed.	The displayed information is not up-to-date. (O) Execute refresh processing and, if necessary, try again.
KAQM21103-E	Processing failed because an unexpected internal error occurred. (Detail = <i>detail</i>)	A problem might exist in the processing. (O) Acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM21104-E	The total capacity of the LUs exceeds the maximum.	The displayed information is not up-to-date, or the total capacity of the LUs exceeds the limit to which the file system capacity can be expanded.

Message ID	Message	Description and Action
		(O) Execute refresh processing, then specify LUs whose total capacity does not exceed the maximum capacity, and then retry the operation.
KAQM21107-E	Unmounting cannot be performed because a file share exists.	A file system that has a setting for a CIFS share cannot be unmounted. The displayed information is not up-to-date. (O) Release the file share, and then retry unmounting of the file system.
KAQM21108-E	Unmounting cannot be performed because a file share exists.	A file system that has a setting for an NFS share cannot be unmounted. The displayed information is not up-to-date. (O) Release the file share, and then retry unmounting of the file system.
KAQM21111-E	A resource group to which the specified file share belongs is in the Offline state, or a failover might have occurred.	A resource group to which the specified file share belongs is in the Offline state, or a failover might have occurred. (O) Execute refresh processing, and then check the statuses of the resource group and cluster.
KAQM21118-E	The specified directory does not exist. (entered data = <i>directory-name</i>)	The entered shared directory does not exist. (O) Select [Create directory / change directory owner] from [Export point owner], and then try again.
KAQM21120-E	The specified name is already registered as a CIFS share name.	The specified the CIFS share name is already being used by another CIFS share. The displayed information might not be up-to-date. (O) Execute refresh processing, and then specify another CIFS share name.
KAQM21124-E	The number of created CIFS shares has reached the maximum.	The number of created CIFS shares has reached the maximum. (O) Execute refresh processing, release any unnecessary CIFS shares, and then create the new CIFS share.

Message ID	Message	Description and Action
KAQM21125-E	The number of created NFS shares has reached the maximum.	The number of created NFS shares has reached the maximum. (O) Execute refresh processing, release any unnecessary NFS shares, and then create the new NFS share.
KAQM21126-E	The directory cannot be created because a parent directory does not exist. (specified value = <i>directory-name</i>)	The directory cannot be created because a parent directory does not exist. There might be a conflict with an operation of another system administrator. (O) Retry the operation.
KAQM21130-E	The specified directory operation failed due to a reason such as blocking of the file system. (specified value = <i>directory-name</i>)	The specified directory operation failed. The file system might be blocked. The displayed information is not up-to-date. (O) Execute refresh processing, and then check the state of the file system in the list of file systems. If the file system has an error status, acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM21133-E	The specified file system is blocked.	The specified file system or the LU being used by the file system is blocked. Please check the file system status. In the GUI, if " File system status " is "Device error", the LU is blocked. If "Data corrupted", is displayed, the file system is blocked. (O) See the troubleshooting information in the Help to check the status of the file system and the LU, and then contact maintenance personnel to fix the error.
KAQM21134-W	The file system was mounted with the Quota setting disabled because the file system is full.	If an attempt is made to mount a file system that is full when the Quota setting is enabled, the setting will be ignored, and then file system will be mounted with the Quota setting disabled. The displayed information is not up-to-date. (O) Execute refresh processing. Delete any unnecessary data on the file system, or increase the capacity of the file system, and then retry mounting with the Quota setting enabled.

Message ID	Message	Description and Action
KAQM21137-E	A symbolic link is contained in the value specified for the shared directory. (entered data = <i>share-directory-name</i>)	A symbolic link is contained in the value specified for the shared directory. (O) Specify a path that does not include a symbolic link for a shared directory.
KAQM21139-E	An attempt to perform the operation failed because the file system corresponding to the specified file share does not exist. That file system might have been deleted by another system administrator.	The displayed information is not up-to-date. (O) If the specified file share exists, release it. If you want to re-create the same file share then, before you release it, save the file share's setting information. After that, execute refresh processing, and then check the latest information.
KAQM21141-E	The specified user or group cannot be used. (name = <i>user-name-or-group-name</i>)	The specified name might not be registered in the system or be able to be used in the system. Alternatively, if a directory server is being used, connection to the server might not have been possible. (O) If you are using a directory server, make sure that connection to the server is possible. If you are not using a directory server, or if connection to the directory server is possible, make sure the specified name is registered in the system and that it can be used in the system, and then try again. Details: For a group name, an at mark (@) might be displayed at the beginning of the name.
KAQM21143-E	This operation cannot be performed because the resource group, to which the file system corresponding to the specified directory belongs, is active on another physical node in the cluster.	The operation can be performed on the physical node on which the resource group, to which the file system corresponding to the specified directory belongs, is active. (O) Execute refresh processing, and then perform the operation on the other physical node that is online, or place the physical node online, and then retry the operation.
KAQM21144-E	An attempt to update the NFS share has failed. The network address of the host could not	The network address of the host could not be found. (O)

Message ID	Message	Description and Action
	be found. (entered value = <i>specified-client-host</i>)	Execute refresh processing, and check whether the specified file share exists. If it does not exist, specify the existing host or network, and create the file share again. If the specified file share exists, edit the file share, adding the NFS share that specifies the existing host or network.
KAQM21145-E	The directory operation cannot be performed because there are no write permissions for the mounted file system. (specified value = <i>specified-directory-name</i>)	The directory operation cannot be performed because there are no write permissions for the mounted file system. (O) Mount the file system with write permissions, and then retry the operation. If you want to use the existing directory, specify the shared directory as the existing directory, and inherit the permissions.
KAQM21146-E	An attempt was made to execute the operation while the cluster configuration is not defined.	The cluster configuration is not defined. (O) Click the [Cluster Management] button, define the cluster configuration, and then try again.
KAQM21147-E	An attempt to create an NFS share has failed. (specified sub-directory = <i>specified-sub-directory-name</i>)	An NFS share has already been created in a super- or sub-directory of the specified directory. (O) Execute refresh processing, and check whether there is not a NFS share created in a super- or sub-directory, and then try again. If necessary, release any existing NFS share from the super- or sub-directory, and then try again.
KAQM21148-E	The number of file systems has already reached the maximum number.	An attempt was made to create a number of file systems exceeding the maximum. (O) Execute refresh processing, delete an unnecessary file system and retry. See the help for the maximum number of file systems.
KAQM21149-E	The same host is specified more than once for the host or network of NFS share.	The same host cannot be specified more than once for the host or network of NFS share. (O) Correct the value of the duplicated host specified for the host or network

Message ID	Message	Description and Action
		of NFS share, and then retry execution.
KAQM21150-E	The resource group you tried to register file system information for is active on the other node in the cluster.	A file system can be created on the node to which the resource group that is managing the file system information has been moved. (O) Move the resource group, and then perform the operation.
KAQM21152-E	The ACL cannot be set because there is not enough free space in the file system corresponding to the specified directory. (entered data = <i>specified-sub-directory-name</i>)	There is not enough free space in the file system for the ACL setting. (O) Delete any unnecessary data in the file system or increase the file system capacity, and then retry the operation.
KAQM21153-E	The specified file system is a Classic ACL type.	The displayed information has not been updated. (O) Execute refresh processing, and then check the ACL type of the specified file system in the list of file systems.
KAQM21154-E	The specified LU does not exist, or the size of the LU allocated to the virtual server was changed.	The displayed information is not up to date. (O) Depending on the cause of the problem, perform either of the following: (1) If the size of the LU allocated to the virtual server was changed Release the LU from the virtual server, and then refresh the processing node. Verify the status of the specified LU on both nodes, reallocate the LU, and then retry the operation. (2) In all other cases Refresh the processing node, verify the status of the specified LU on both nodes, and then retry the operation. If the problem persists, acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM21155-E	Creation of a virtual server failed.	Initialization of a virtual server OS LU failed. (O) Acquire all the log files and the management server log files, and then contact maintenance personnel.

Message ID	Message	Description and Action
KAQM21156-E	Processing failed because an internal error occurred.	<p>Processing failed because an internal error occurred. A timeout might have occurred while installing the program to a virtual server.</p> <p>(O)</p> <p>Check whether an error has occurred by referring to the system messages of the physical node and the corresponding virtual server. Take action according to the message KAQM35nnn output among the system messages. If a system message is not output, acquire all the log files (in addition to the log files acquired by batch acquisition, also acquire the management server log files), and then contact maintenance personnel.</p>
KAQM21157-E	An attempt to perform file sharing has failed, because a license is not set.	<p>The license for [<i>license-name</i>] is not set.</p> <p>(O)</p> <p>Set the license, restart the resource group or the virtual server, refresh the processing node, and then try again.</p>
KAQM21158-E	The operation has failed.	<p>One of the nodes in the cluster might have stopped, or a network error might have occurred.</p> <p>(O)</p> <p>Make sure that both of the nodes in the cluster are running. Also, make sure that there are no network errors. After resolving any problems, retry the operation. If the error persists, acquire all the log files and the management server log files, and then contact maintenance personnel.</p>
KAQM21201-E	The operation has failed.	<p>The displayed information is not up-to-date.</p> <p>(O)</p> <p>Execute refresh processing, and then retry the operation. If the error occurs again, acquire all the log data and the management server log files, and then contact maintenance personnel.</p>
KAQM21202-E	The specified LU cannot be assigned to a virtual server because the LU is being used on the physical node.	<p>The displayed information is not up to date.</p> <p>The specified LU cannot be assigned to a virtual server because the LU is being used on the physical node.</p> <p>(O)</p>

Message ID	Message	Description and Action
		Execute refresh processing, specify a different LU, and then retry the operation.
KAQM21203-E	The specified LU cannot be assigned because it is already assigned to a virtual server.	The displayed information is not up-to-date. The specified LU cannot be assigned because it is already assigned to a virtual server. (O) Execute refresh processing, specify a different LU, and then retry the operation.
KAQM21204-E	The specified LU cannot be released from the virtual server because the LU is being used.	The displayed information is not up-to-date. The specified LU cannot be released from the virtual server because the LU is being used. (O) Execute refresh processing, specify a different LU, and then retry the operation.
KAQM21205-E	IP addresses of different networks are specified in the same interface.	IP addresses of different networks are specified in the same interface. (O) Execute refresh processing, and then retry the operation if necessary.
KAQM21206-E	Processing failed because an unexpected internal error occurred. (Detail = <i>detail</i>)	A problem might exist in the processing. (O) Delete the virtual server, and then retry the operation. When the error occurs again, acquire all the log files and the management server log files, and contact maintenance personnel.
KAQM21211-E	This operation cannot be performed because the virtual server is not running normally.	This operation cannot be performed because the virtual server is not running normally. (O) Execute refresh processing, make sure that the virtual server is running normally, and then retry the operation.
KAQM21212-E	Processing of the failover function has failed.	The failover function returned an error. (O) Examine the physical node and virtual server system messages to check whether an error occurred. If a KAQM35nnn message was output to the system messages, take appropriate action. If neither message was output, acquire all the File

Message ID	Message	Description and Action
		Services Manager log files, and then contact maintenance personnel. See online Help for a list of the File Services Manager log files.
KAQM21213-E	Communication on the processing node has failed.	Communication on the processing node has failed. (O) The LAN cable might have been disconnected. Make sure that the LAN cable is connected. Additionally, the synchronization processing of a processing node might not have finished because one of the physical nodes was heavily loaded. Make sure that the status of the load on the physical node is normal, and then retry the operation. If this error occurs again, contact maintenance personnel.
KAQM21214-E	An IP address is already specified for the specified interface.	The displayed information is not up-to-date. (O) Execute refresh processing, and then retry the operation if necessary.
KAQM21215-E	No IP address is specified for the specified interface.	The displayed information is not up-to-date. (O) Execute refresh processing, and then retry the operation if necessary.
KAQM21216-E	The specified IP address is already in use. (IP address = <i>IP-addresses</i>)	The specified IP address is already in use. (O) Execute refresh processing, check the IP addresses on the [List of Interfaces] page of the [Network & System Configuration] dialog box, specify a different IP address, and then retry the operation.
KAQM21218-E	The status of the specified virtual server does not allow execution.	The status of the specified virtual server does not allow execution. (O) Execute refresh processing, check the status of the virtual server, and then retry the operation.
KAQM21219-E	Resources required by the requested process are being used by another user.	Resources to be used for the processing are being used exclusively by another user, or the physical node or virtual server being used has stopped. (O)

Message ID	Message	Description and Action
		<p>Please retry the operation. If the physical node or virtual server stopped during processing, wait about 15 minutes or start the stopped physical node or virtual server. If this message is displayed during the system software installation, execute refresh processing, and then confirm that the system software has been updated. If the system software has not been updated, check the cluster status, and after confirming that no other administrators are performing operations, reattempt the installation.</p> <p>Details:</p> <p>See G. <i>Actions for When a Timeout Occurs due to the Inability to Secure the Resources Used for Processing</i>, and follow the procedure that is listed.</p>
KAQM21220-E	File system functions cannot be used because the resource group or virtual server is not running normally.	<p>The resource group or virtual server is not running normally.</p> <p>(O)</p> <p>Execute refresh processing. Check the cluster, node, and resource group status or the virtual server status, and then retry the operation.</p>
KAQM21221-E	Deletion of resource information has failed, either because the node or virtual server is not operating normally or because an internal processing problem exists.	<p>The node or virtual server is not operating normally or an internal processing problem might exist.</p> <p>(O)</p> <p>Check the cluster, node, and resource group status or the virtual server status, and then retry the operation.</p> <p>If no status problems exist, acquire all the log data and the management server log files, and then contact maintenance personnel.</p>
KAQM21222-E	The file system specified for the shared directory is not mounted. This might be due to the resource group being in the Offline state, a failover occurring, or the virtual server not running normally.	<p>The file system specified for the shared directory is not mounted. This might be due to the resource group being in the Offline state, a failover occurring, or the virtual server not running normally.</p> <p>(O)</p> <p>Execute refresh processing, and then, if the resource group is in the Offline state, a failover is occurring, or the virtual server is not running normally, remove the cause of the problem, and then retry the operation. If the file system is not mounted, mount it, and then retry the operation.</p>

Message ID	Message	Description and Action
KAQM21226-E	The specified LUs do not satisfy the conditions for striping.	There is an error in the number of specified LUs, or the LUs are not all of the same size. The displayed information might not be up-to-date. (O) Execute the refresh processing, and then check the striping settings. If you cannot use the GUI to check the settings, use the CLI to check them. If necessary, execute the operation again.
KAQM21227-E	The operation cannot be performed because the virtual server settings might be inconsistent. (virtual server name = <i>virtual-server-whose-settings-are-inconsistent</i> , details = <i>interrupted-processing, details-about-the-interrupted-processing</i>)	The operation cannot be performed because the virtual server is in Operation Incomplete status. (O) Check the status of the virtual server, and then correct the cause of the problem. For details on how to do so, see the online Help.
KAQM21228-E	This operation cannot be performed in the physical node.	This operation cannot be performed on the physical node. IP address might have been changed. (O) Update information for the virtual server, clicking on a [Refresh Processing Node] button, and retry the operation if necessary.
KAQM21229-E	This operation cannot be performed in the virtual server.	This operation cannot be performed on the virtual server. IP address might have been changed. (O) Register the processing node again by the [Edit Node] dialog, and retry the operation if necessary.
KAQM21240-E	Execution is not possible because the resource group or virtual server is not operating normally or a resource has been blocked.	Execution is not possible because the resource group or virtual server is not operating normally or a resource has been blocked. (O) Execute refresh processing. Check the cluster, node, and resource group status or the virtual server status, and then retry the operation.
KAQM21241-E	The operation has failed.	The specified virtual server is not running. (O)

Message ID	Message	Description and Action
		Execute refresh processing, check the status of the virtual server, and then retry the operation.
KAQM21242-E	The specified user LU does not exist.	The specified user LU might not be connected to the current active node of the virtual server, or an error in the path to the specified user LU might have occurred. (O) Execute refresh processing, check the user LU status for the current active node of the virtual server, and then retry the operation if necessary.
KAQM21243-E	The specified LUs are from two or more different storage systems.	The displayed information is not up-to-date. The specified LUs are from two or more different storage systems. (O) Execute refresh processing, specify LUs from the same storage system, and then retry the operation.
KAQM21244-E	The specified number of LUs exceeds the maximum number.	The displayed information is not up-to-date. The specified number of LUs exceeds the maximum number. (O) Execute refresh processing, make sure the number of specified LUs is valid, and then retry the operation.
KAQM21245-E	The storage system of the LU making up the file system is different from the storage system of the specified LU.	The displayed information is not up-to-date. The storage system of the LU making up the file system is different from the storage system of the specified LU. (O) Execute refresh processing, specify the same storage system for the LU as the storage system of the LU that makes up the file system, and then retry the operation.
KAQM21246-W	The currently used i-node capacity was set as the maximum capacity, because a value smaller than the currently used i-node capacity was specified as the maximum capacity.	If a value smaller than the currently used i-node capacity is specified as the maximum capacity, the currently used i-node capacity is set as the maximum capacity. (O) Execute refresh processing, and then check the i-node capacity that is currently being used. If you want to decrease the percentage of the maximum capacity that is usable as

Message ID	Message	Description and Action
		the i-node capacity, expand the capacity of the file system.
KAQM21247-E	The file system is being blocked because there is not enough space on the differential-data storage device, or there might be a problem with the differential-data storage device.	The operation cannot be performed because either the file system is being blocked because there is not enough space on the differential-data storage device, or there might be a problem with the differential-data storage device. (O) Refresh the file snapshots information in [List of File Systems], check the status indicated for the file system, and then take action appropriate to the status.
KAQM21248-E	Creation of a virtual server has failed.	The capacity of the virtual server OS LU has exceeded the maximum capacity, or the displayed information might not be up-to-date. (O) Execute the refresh processing, specify a virtual server OS LU that has a capacity below the maximum capacity, and then execute the operation again.
KAQM21249-E	The operation failed.	The displayed information might not be up to date. A V-VOL of Copy-on-Write Snapshot has been specified. (O) Execute refresh processing, check the specified LU, and then retry the operation.
KAQM21251-E	An attempt to expand the file system failed because the system is currently under a heavy load.	There might be an internal conflict as a result of the files in the file system being accessed too many times (i.e. write operations) by the clients. (O) Wait a while, refresh the system information, and then use the [List of File Systems] window to confirm that the file system has expanded. If the file system has not expanded, acquire all the log files, and then contact maintenance personnel. See online Help for a list of the log files.
KAQM21252-E	The capacity of the differential-data storage device is insufficient.	This operation cannot be performed because the capacity of the differential-data storage device is insufficient. (O)

Message ID	Message	Description and Action
		Refresh file snapshots information. Expand the differential-data storage device, or delete any unnecessary differential-data snapshots.
KAQM21253-E	The specified file system is expanding.	The operation cannot be performed because the specified file system is expanding. (O) Wait a while, refresh the system information, and then use the [List of File Systems] window to confirm that the file system has expanded. If the file system has expanded, try the operation again. If the file system has not expanded, acquire all the log files, and then contact maintenance personnel. See online Help for a list of the log files.
KAQM21254-E	The operation has failed.	The operation cannot be performed because neither of the nodes is running. (O) Click the [Cluster Management] button, and then check the statuses of both nodes. Remove the cause of the error, and then retry the operation.
KAQM21255-W	The license has been entered, but the license information could not be acquired.	There might be a problem in the acquisition of the license information, even though the license has already been entered. (O) Refresh the license information, and then check it. If the error occurs again, acquire all the File Services Manager log files, and then contact maintenance personnel. For details about the list of File Services Manager log files, see online Help.
KAQM21256-W	The number of automatically created differential-data snapshots exceeds the specified maximum number of automatically created snapshots.	Possible causes are as follows: -The number of automatically created differential-data snapshots exceeds the specified maximum number of automatically created snapshots. -The displayed information is not up to date. (O) Update file snapshots information, and then delete any unnecessary differential-data snapshots that were automatically created.

Message ID	Message	Description and Action
KAQM21257-W	The number of automatically mounted differential-data snapshots exceeds the specified maximum number of automatically mounted snapshots.	Possible causes are as follows: -The number of automatically mounted differential-data snapshots exceeds the specified maximum number of automatically mounted snapshots. -The displayed information is not up to date. (O) Update file snapshots information, and then unmount any unnecessary differential-data snapshots that were automatically mounted.
KAQM21258-E	Processing of the failover function failed.	The failover function returned an error. (O) Check whether any KAQG7nnnn or KAQM35nnn messages have been output for either node in the cluster, and if they have, take appropriate action. If no messages have been output, see the troubleshooting chapter in online Help, and then take appropriate action. If you cannot identify the cause of the error, acquire all the log files and the management server log files, and then contact maintenance personnel. See online Help for a list of the log files.
KAQM21259-E	An attempt to edit the WORM properties has failed. (processing node name = <i>processing-node-name</i> , file system name = <i>file-system-name</i>)	The WORM function settings cannot be changed because the specified file system is not a WORM file system. (O) Execute refresh processing, and then check the specified file system.
KAQM21260-E	ACL-type conversion operations cannot be performed because the specified file system is a WORM file system. (processing node name = <i>processing-node-name</i> , file system name = <i>file-system-name</i>)	After a WORM file system is created, its ACL type cannot be converted. (O) Execute refresh processing, and then check the specified file system.
KAQM21262-E	An error was found in the correlation among the minimum, default, and maximum retention periods on the WORM file system. (processing node name = <i>processing-node-name</i> , file system name = <i>file-system-name</i>)	The minimum retention period is more than the maximum retention period, or the default retention period is less than the minimum retention period, or the default retention period is more than the maximum retention period. (O) Execute refresh processing, check the value of minimum retention period and

Message ID	Message	Description and Action
		maximum retention period, and then retry the operation by corrected value.
KAQM21263-E	An attempt to edit the file system has failed. (processing node name = <i>processing-node-name</i> , file system name = <i>file-system-name</i>)	Processing cannot be performed for the specified file system because it was not mounted with read and write permissions. (O) Execute refresh processing, mount the specified file system in the read-write status, and then retry the operation.
KAQM21264-E	The operation has failed.	A conflict with another system administrator's operation or system error may have occurred. (O) Wait a while, and then refresh the system information. If the error continues to occur, acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM21270-E	A version earlier than the already installed version cannot be installed. (The specified version = <i>the-specified-version</i>)	The specified version of the program is earlier than the installed version. (O) Please install a program version that is a later version of, or the same version as, the already installed version.
KAQM21271-E	An attempt to install the program failed.	The system may be busy. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM21272-E	An attempt to install the program failed.	A problem may exist in the processing of the program information or program management file. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance personnel. See the help for a list of the Management log files.
KAQM21273-E	Internal processing failed.	A problem may exist in the processing of the program management file, the OS disk or the system file. (O) Retry execution. Acquire all the Management log files if this error occurs again, and inform maintenance

Message ID	Message	Description and Action
		personnel. See the help for a list of the Management log files.
KAQM21274-E	An invalid installation file was specified.	The specified file is not in the format of an installation file. (O) Make sure that the specified file is an installation file, and then retry the operation. If the error occurs again, acquire all the Management log files and the installation file for which the setup failed, and then contact maintenance personnel. See online Help for a list of Management log files.
KAQM21275-E	An attempt to write to an installation file has failed.	An unexpected error occurred while writing a to file. (O) Acquire all the Management log files, and then contact maintenance personnel. See online Help for a list of the Management log files.
KAQM21276-E	An attempt to extract an installation file has failed.	An unexpected error occurred while extracting an installation file. (O) Acquire all the Management log files, and then contact maintenance personnel. See online Help for a list of the Management log files.
KAQM21277-E	An attempt to acquire the list of packages has failed. (details code = <i>detail-code</i>)	An attempt to acquire the list of packages has failed. (O) Use maintenance mode to acquire the OS log, and then contact maintenance personnel.
KAQM21278-E	An attempt to copy a package has failed. (details code = <i>detail-code</i>)	An attempt to copy a package has failed. (O) Check whether there are any problems with the internal HDDs. If there are no problems with the internal HDDs, acquire the OS log, and then contact maintenance personnel.
KAQM21279-E	An attempt to install a package has failed. (details code = <i>detail-code</i>)	An attempt to install a package has failed. (O) Check whether there are any problems with the internal HDDs. If there are no problems with the internal HDDs, acquire the OS log, and then contact maintenance personnel.

Message ID	Message	Description and Action
KAQM21280-E	An attempt to acquire the version information has failed. (details code = <i>detail-code</i>)	An attempt to acquire the version information has failed. (O) Reinstall the product. If the error occurs again, contact maintenance personnel.
KAQM21281-E	An attempt to write to a system file has failed. (details code = <i>detail-code</i>)	An attempt to write to a system file has failed. (O) Check whether there are any problems with the internal HDDs. If there are no problems with the internal HDDs, acquire the OS log, and then contact maintenance personnel.
KAQM21282-E	An attempt to access an internal HDD has failed. (details code = <i>detail-code</i>)	An attempt to access an internal HDD has failed. (O) Check whether there are any problems with the internal HDDs. If there are no problems with the internal HDDs, acquire the OS log, and then contact maintenance personnel.
KAQM21283-E	An attempt to mount a file system has failed. (number of partitions = <i>number-of-partition</i>)	An attempt to mount a file system has failed. (O) Check whether there are any problems with the internal HDDs. If there are no problems with the internal HDDs, acquire the OS log, and then contact maintenance personnel.
KAQM21284-E	An attempt to back up the settings file has failed.	An attempt to back up the settings file has failed. (O) Check whether there are any problems with the internal HDDs. If there are no problems with the internal HDDs, acquire the OS log, and then contact maintenance personnel.
KAQM21285-E	An attempt to restore the settings file has failed.	An attempt to restore the settings file has failed. (O) Check whether there are any problems with the internal HDDs. If there are no problems with the internal HDDs, acquire the OS log, and then contact maintenance personnel.
KAQM21286-E	An attempt to configure the boot loader has failed.	An attempt to configure the boot loader has failed.

Message ID	Message	Description and Action
		(O) Check whether there are any problems with the internal HDDs. If there are no problems with the internal HDDs, acquire the OS log, and then contact maintenance personnel.
KAQM21287-E	An update installation cannot be performed because there is not enough space on the internal HDDs.	An update installation cannot be performed because there is not enough space on the internal HDDs. (O) Delete the core files, log files, and any unnecessary files under the home directory, and then re-attempt the upgrade installation. If the error occurs again, acquire the OS log, and contact maintenance personnel.
KAQM21288-E	An internal error has occurred. (details code = <i>detail-code</i>)	A problem might exist in the processing. (O) Acquire the OS log, and then contact maintenance personnel.
KAQM21289-E	An installation script failed. (script name = <i>name-of-script</i>)	An installation script failed. (O) Acquire the OS log, and then contact maintenance personnel.
KAQM21290-E	A timeout occurred during the installation.	A timeout occurred during the installation. (O) Acquire the OS log, and then contact maintenance personnel.
KAQM21291-E	The number of directories for which a capacity is set has reached the maximum.	A new share quota cannot be set because the number of directories for which a capacity is set has reached the maximum. (O) Use a command to check how many directories in the file system have a capacity set for them. Also, if there is an unnecessary capacity set for a directory, remove the capacity setting from the directory.
KAQM21292-E	An attempt to acquire the share quota information has failed.	A problem might exist in the processing to acquire share quota information. (O) Acquire all the log files and the management server log files, and then contact maintenance personnel.

Message ID	Message	Description and Action
KAQM21293-E	An attempt to set a share quota or release settings has failed.	A problem might exist in the processing to set the share quota. (O) Acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM21294-E	An attempt to acquire system information has failed.	There might be a heavy load on the system or a system error might have occurred. (O) Wait a while, and then try again. If the error occurs again, acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM21295-E	An attempt to acquire mount information has failed.	A problem might exist in the OS disk or in the processing to acquire mount information. (O) Check the OS disk settings and whether an error exists on the OS disk. If there is no problem, acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM21296-E	The file system (<i>file-system-name</i>) for which the specified file share is being created is not in a normal state.	A problem might exist with the file system for which the specified file share is being created. (O) Check whether an error occurred in the file system for which the specified file share is being created. If there is no problem, acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM21297-E	An attempt to open the log files has failed.	There might be either a problem with log files or a conflict with other processing. (O) Wait a while, and then try again. If the error occurs again, check the settings for the OS disk. If there is no problem, acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM21298-E	A mounted directory was detected during processing.	A differential-data snapshot in a share might have been made public. (O)

Message ID	Message	Description and Action
		If a differential-data snapshot in a share has been made public, unmount the snapshot, and then retry the operation.
KAQM21299-E	Some of the resources to be used for the requested processing are being used by another user.	Some of the resources to be used for processing are being used exclusively by another user, or the node being used exclusively has stopped. (O) Wait a while, and then execute again. If the node stops during processing, wait about 15 minutes or boot the stopped node.
KAQM21300-E	An attempt to open a system file has failed.	There might be a problem in the system file or contention with other processing might have occurred. (O) Wait a while, and then try again. If the error occurs again, check the settings for the OS disk. If there is no problem, acquire all of the kernel logs, and then contact maintenance personnel. See the help for details on how to acquire kernel logs.
KAQM21301-E	In the cluster, nodes that cannot synchronize exist.	A problem exists in the communication processing between nodes. (O) The LAN cable might have been disconnected. Make sure that the LAN cable is connected. Also, the synchronization processing might not have completed because one of the nodes is heavily loaded. In this case, make sure that the state of the node changes to normal (that is, not heavily loaded), and then retry the operation. If the error occurs again, inform maintenance personnel.
KAQM21302-E	An attempt to specify the settings failed because the file system (<i>file-system-name</i>) is mounted with read-only permissions.	The specified file system (<i>file-system-name</i>) is mounted with read-only permissions. (O) Remount the file system with read/write permissions, and then try again.
KAQM21303-E	The operation has failed.	The operation cannot be executed on the specified node. (O) Refresh processing, or register the processing node again.

Message ID	Message	Description and Action
KAQM21304-E	An attempt to set the IP address failed.	The operation was performed on a virtual server to which only one IP address is assigned. This operation cannot be performed while the virtual server is running. (O) Stop the virtual server, or set another IP address and then retry the operation.
KAQM21305-W	The specified routing entry already exists.	The specified routing entry already exists, or an attempt was made to register two or more default routing entries. (O) Make sure that the routing settings you are attempting to add do not already exist, and that the routing settings on the nodes in the cluster are the same. If the routing settings already exist, specify different settings. If the routing settings on the nodes in the cluster are not the same, delete the settings, and then specify new settings.
KAQM21306-E	The operation failed.	This operation cannot be performed because the specified file system is being used by file snapshots. (O) Use File Services Manager to disable file snapshots enabled for the file system, and then retry the operation.
KAQM21307-E	An attempt to set the share quota failed.	A share quota that is smaller than the soft limit of the directory cannot be specified. (O) Use a command to check the soft limit of the directory for which the share quota is to be set. Specify a share quota value that is larger than the soft limit value, and then retry the operation.
KAQM21308-E	An operation for tier <i>tier-number</i> on the specified file system has failed. (detailed message = <i>detail-message</i>)	An operation on the tiered file system failed because the error described in "detailed message" occurred. (O) Perform the [Refresh Processing Node] operation, and then follow the instructions in the detailed message to resolve the problem.

Message ID	Message	Description and Action
KAQM21309-E	Capacity management cannot be enabled for the selected file share.	Capacity management cannot be enabled if content sharing is set as read-only. (O) Check the content sharing settings for the file share. If necessary, specify a file share in another file system, and then retry the operation.
KAQM21310-E	The operation has failed.	The capacity of the specified share could not be managed because subtree quotas are not set for the second-level subdirectories. (O) Check the configuration of the directories.
KAQM21311-E	An attempt to connect to an LU has failed.	An error occurred in accessing the LU. (O) After performing a refresh, check the connection statuses of the specified LUs on both nodes. Also, if local data encryption functionality is enabled, check the system messages to see if any errors occurred when the OS was started. If an error occurred, take appropriate action, and then try again. If the error occurs again, acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM21312-E	An attempt to set the share quota failed.	The number of subtree quotas that can be set in the directory tree of the direct descendant reached the upper limit. (O) Use a command to revise the subtree quota settings.
KAQM21313-E	The operation has failed.	The OS disk might be full, or there might be a problem in the OS disk, file system, or LU. (O) Refresh the processing node, and then check the status of the file system and LU, and check any SNMP notification messages and email notifications. If there is a problem, follow the instructions in Help to resolve it. If the problem cannot be resolved, collect all the log files and management server log files, and then contact maintenance personnel.

Message ID	Message	Description and Action
KAQM21314-E	The maximum number of file systems that can be registered in the system has been reached.	The maximum number of file systems that can be registered in the system has been reached. (O) Unmount the mounted differential-data snapshot or delete the unnecessary file system, and then retry the operation.
KAQM21316-E	The specified file system does not exist.	The displayed information is not up-to-date. Processing cannot be executed because the specified file system does not exist in the system. (O) Execute refresh processing, check the file system, and then try again.
KAQM21317-E	The specified LU does not exist.	The displayed information is not up to date. Processing cannot be executed because the specified LU does not exist in the system. The LU might have been deleted. (O) Execute refresh processing, check the list of LUs, and then retry the operation.
KAQM21318-E	The specified LU is being used.	The displayed information is not up-to-date. The specified LU is being used for another purpose. (O) Execute refresh processing, check the list of LUs, and then try again.
KAQM21319-E	The operation on the file system cannot be executed because a failover has occurred.	The displayed information is not up-to-date. The operation on the file system cannot be executed because a failover has occurred. (O) Execute refresh processing, and then check the status of the file system. Perform failback to bring the system back to the normal state, and then try again.
KAQM21320-E	A system error occurred.	A system error occurred. (O) Acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM21321-E	An LU smaller than the stipulated size exists in the specified LUs, or the total capacity of the specified LUs	The displayed information is not up-to-date. An LU smaller than the stipulated size exists in the specified LUs, or the total capacity of the specified LUs is

Message ID	Message	Description and Action
	is insufficient as the required capacity of the work space.	insufficient as the required capacity of the work space. (O) Execute refresh processing, check the list of LUs, and then try again.
KAQM21322-E	An attempt to connect to an LU has failed.	An access error has occurred in the LU. (O) Execute refresh processing, check the connection status of the specified LU on both nodes, and then retry the operation. If you are using local data encryption, check the system messages on both nodes to see whether the KAQM05256-E message, or a message ranging from KAQM05258-E to KAQM05264-E was output during OS startup. If an error occurred, take action as described in the error message, and then retry the operation. If an error occurs again, follow the recovery procedure in online Help for when a device file access error occurs.
KAQM21323-E	The total size of the specified LUs is too large.	The displayed information is not up-to-date. The total size of the specified LUs is too large. (O) Execute refresh processing, specify LUs of an appropriate size, and then try again.
KAQM21324-E	An error has occurred in the logical volume of the file system or work space.	An error has occurred in the logical volume of the file system or the work space. This message might also be output when a cluster, node, or resource group is not running normally. (O) Check the cluster, node, and resource group status. If the statuses are normal and you still cannot identify the cause of the problem, follow the relevant recovery procedure (for when an access error occurs in the device file) in Help.
KAQM21325-E	If the specified LUs are added, the total size of the work space will exceed the maximum.	The displayed information is not up-to-date. If the specified LUs are added, the total size of the work space will exceed the maximum. (O) Execute refresh processing, and then try again.

Message ID	Message	Description and Action
KAQM21326-E	If the specified LUs are added, the total number of LUs of the work space will exceed the maximum.	The displayed information is not up-to-date. If the specified LUs are added, the total number of LUs of the work space will exceed the maximum. (O) Refresh the browser window and then try again.
KAQM21327-E	The specified LU does not belong to the same storage system as the LUs that make up the file system.	The displayed information is not up-to-date. (O) Execute refresh processing, check the LUs, and then try again.
KAQM21328-E	The specified device size is insufficient for the required capacity of the work space.	The displayed information is not up-to-date. (O) Refresh the information, check the device size, and then try again.
KAQM21329-E	The work space cannot be set up because the specified file system is too large.	The displayed information is not up-to-date. The work space cannot be set up because the specified file system is too large. (O) Execute refresh processing, and then check the size of the file system.
KAQM21330-E	The total of the following exceeds the maximum: the number of LUs used in the file system, and the number of specified LUs.	The information displayed in the browser window is not up-to-date. The total of the following exceeds the maximum: the number of LUs used in the file system, and the number of specified LUs. (O) Refresh the browser window and then try again.
KAQM21331-E	If you add the specified LUs, the total of the following will exceed the maximum: the number of the LUs used in the file system, and the number of LUs that make up the work space.	The information displayed in the browser window is not up-to-date. If you add the specified LUs, the total of the following will exceed the maximum: the number of the LUs used in the file system, and the number of LUs that make up the work space. (O) Refresh the browser window and then try again.

KAQM23 messages

This section explains messages that have a message ID beginning with KAQM23, and the actions to be taken if such messages appear.

Table 5-16 KAQM23 messages

Message ID	Message	Description and Action
KAQM23013-E	The specified IP address is invalid. (IP address = <i>IP-address</i>)	The specified IP address is invalid. It might not be a fixed IP address. (O) Check the IP address, and then try again.
KAQM23014-E	An attempt to acquire information about the processing node has failed. (specified IP address = <i>specified-IP-address</i>)	An attempt to acquire the IP address of the other physical node has failed. (O) Check whether both physical nodes of the specified processing node have started. Alternatively, check the network settings.
KAQM23018-W	The operation was completed. The file shares that did not belong to the file system were ignored. (physical node = <i>physical-node-name</i> (number of ignored file shares = <i>number-of-ignored-share.</i>), physical node = <i>physical-node-name</i> (number of ignored file shares = <i>number-of-ignored-share.</i>))	There is a file share that does not belong to any file system. The file system might have been deleted, or a failover might be executing. (O) If the file system has been deleted, use the command to delete the file share. Alternatively, wait a while, and then execute refresh processing.
KAQM23019-E	Acquisition of information from Device Manager has failed. (ID = <i>ID</i> , message = <i>message</i>)	Acquisition of information from Device Manager has failed. (O) Refer to the Device Manager manual and check the details of the corresponding message.
KAQM23020-E	Acquisition of information from Device Manager has failed.	Communication with Device Manager has failed. (O) Refer to the property file and confirm that the communication port number is the same as Device Manager. If they are the same, make sure that no error is occurring in Device Manager, and then follow the Device Manager manual to remove the cause of the problem. If an error still occurs, acquire the management server log files, and contact maintenance personnel.

Message ID	Message	Description and Action
KAQM23022-E	Processing failed because the processing node of the specified file system does not support this functionality.	Processing failed because the processing node of the specified file system does not support this functionality. (O) Execute refresh processing, and then confirm the system version on the processing node of the file system.
KAQM23023-E	The operation has failed.	There might be a problem with the management server. (O) Check the status of the management server. If this message is displayed while a file is being transferred to the management server, then there might not be enough free space on the management server. After resolving the problem, retry the operation. If the error persists, acquire the management server log files, and then contact maintenance personnel.
KAQM23024-E	Notification of configuration has failed(<i>physical-node-host-name-or-virtual-server-name</i>).	An error occurred during communication with Device Manager. (O) Check the items below, and then retry the operation. If the error continues to occur, acquire the management server log files, and then contact maintenance personnel. <ul style="list-style-type: none"> • The Device Manager information set in File Services Manager • The operational status of the connection-destination Device Manager • The network environment
KAQM23025-E	Notification of configuration has failed(<i>physical-node-host-name-or-virtual-server-name</i>).	Device Manager is busy. (O) If an error occurred while refreshing the system or changing Device Manager settings, wait a while, and then refresh the system again. If a periodic notification error occurred, the configuration information will be sent tomorrow. If the error continues to occur, change the time set for sending configuration information.
KAQM23026-E	Configuration information has failed to be sent. (node = <i>physical-node-host-name-or-virtual-server-name</i> , message	Refer to the Device Manager manual and check the details of the corresponding message. (O)

Message ID	Message	Description and Action
	ID = <i>message-id-of-Device-Manager</i> , Error Information = <i>error-information-of-Device-Manager</i>)	Refer to the Device Manager manual and check the details of the corresponding message.
KAQM23027-I	Configuration information was successfully sent(<i>physical-node-host-name-or-virtual-server-name</i>).	No action is required.
KAQM23028-E	An attempt to connect with the Device Manager failed.	An error occurred during communication with Device Manager. (O) Check the items below, and then retry the operation. If the error continues to occur, acquire the management server log files, and then contact maintenance personnel. <ul style="list-style-type: none"> • The input values • The operational status of the connection-destination Device Manager • The network environment
KAQM23029-I	The connection test with an Device Manager has been completed.	No action is required.
KAQM23030-E	An attempt to authenticate the user has failed.	Possible causes are as follows: (1) The specified administrator does not have permission to operate File Services Manager. When connected to Device Manager on another server: (2) The server that manages File Services Manager user accounts has not been changed. (3) The session has expired. (O) Contact the File Services Manager administrator. After the settings have been corrected, log in again, and retry the operation.
KAQM23032-E	An attempt to configure the settings for sending a warning to Device Manager has failed. (message ID = <i>message-ID</i>)	See message. (O) Refer to the message, and then remove the cause of the problem. After that, reconfigure the settings from the [Edit HDvM Settings] dialog box.

Message ID	Message	Description and Action
KAQM23034-E	Registration of the storage system failed.	The Admin, Modify or View role has not been given for the storage system you tried to register. (O) Confirm with the Device Manager administrator what kind of the role has been given for the storage system. Remove the cause of the problem, and then try again.
KAQM23035-W	The connection with the HCP system cannot be tested.	DNS settings have not been entered or the settings have not been applied. If you are setting up a system for the first time, or if the DNS settings were changed, the settings are applied after the setup wizard is executed. (O) Check whether DNS settings were entered. If settings have been entered, execute the setup wizard, and check the results of the connection test from results screen.
KAQM23037-E	An attempt to send the configuration information to Device Manager failed.	An error occurred in communication with Device Manager. (O) Check the settings in the [Edit HDvM Settings] dialog box, and then confirm that the connection test finished successfully.
KAQM23100-E	An internal error occurred. An attempt to create the message to send to the physical node or virtual server has failed.	An attempt to create the message to send to the physical node or virtual server has failed. (O) Acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM23101-E	An attempt to communicate with the physical node or virtual server has failed. (IP address = <i>IP-address</i>)	An attempt to communicate with the physical node or virtual server has failed. (O) Check whether the specified IP address is correct and that the physical node or virtual server is online, and then try again. If the SSL certificate is set on the node, make sure that the SSL certificate is also set on the management server. In addition, note that software for the processing node needs to be updated based on the combination of versions of File Services Manager and the processing node. For details about how to update

Message ID	Message	Description and Action
		software, see the <i>Administrator's Guide</i> .
KAQM23102-E	An internal error occurred. An attempt to analyze the reply message from the physical node or virtual server has failed.	An attempt to analyze the reply message from the physical node or virtual server has failed. (O) Acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM23103-E	A credential error occurred.	The password of the physical node or virtual server does not match the password set for the management server. (O) Make sure the passwords for the management server and the physical node or virtual server match.
KAQM23104-E	A timeout occurred during communication with a physical node or virtual server.	There was no response from the physical node or virtual server. Possible causes are as follows: <ul style="list-style-type: none"> • There is a problem with the network the physical node or virtual server is on. • A high processing load is executing on the physical node or virtual server. • At least one of the steps required for the functionality for linking with array volume replication functions has not completed on the physical node or virtual server. • The response from an external server of the physical node or virtual server has been delayed. (O) Check the status of the physical node or virtual server, and then fix the cause of the error. Since processing might have also executed after the timeout occurred, execute refresh processing, check the status and, if necessary, execute the operation again.
KAQM23105-E	Communication with the management server failed.	Communication with the management server failed. (O) Check the status of the management server. If the management server is running properly, wait a while, and

Message ID	Message	Description and Action
		then try again. If the problem persists, log out, and then log in again.
KAQM23213-E	The operation has failed.	The target processing node is not supported by the File Services Manager server. (O) Check the version of the File Services Manager server, and then install the appropriate version.
KAQM23300-E	An error occurred in the database of the management server. An attempt to establish a connection with the database has failed.	A connection with the database could not be established. A temporary error might have occurred because too many simultaneous operations were executed, or the database might not have started. (O) Restart the File Services Manager server, because the error might be temporary. Check that the database has started, by executing the <code>hcmdssrv /status</code> command. The KAPM06440-I message should be displayed. If it is not displayed, start the database by executing the <code>hcmdssrv /start</code> command. For more information about commands, see online Help. If the problem is still not resolved, acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM23301-E	The operation has failed.	A temporary error might have occurred. (O) Wait a while, and then retry the operation. If the error occurs again, restart File Services Manager server, and then try again. Check that the database has started by executing the <code>hcmdssrv /status</code> command. The KAPM06440-I message should be displayed. If it is not displayed, start the database by executing the <code>hcmdssrv /start</code> command. For more information about commands, see online Help. If the error occurs again, acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM23302-E	The operation has failed.	A temporary error might have occurred.

Message ID	Message	Description and Action
		<p>(O)</p> <p>Wait a while, and then retry the operation. If the error occurs again, restart File Services Manager server, and then try again. If the error occurs again, acquire all the log files and the management server log files, and then contact maintenance personnel.</p>
KAQM23304-E	An error occurred in the database of the management server. An attempt to add data to the database has failed. (data = <i>data-that-was-not-added</i>)	<p>An attempt to add data to the database has failed. It might be a temporary error.</p> <p>(O)</p> <p>The database might be incomplete, so restart the File Services Manager server, and then try again. If the error continues to occur, acquire all the log files and the management server log files, and then contact maintenance personnel.</p>
KAQM23305-E	An error occurred in the database of the management server. An attempt to update data in the database has failed. (data = <i>data-that-was-not-updated</i>)	<p>An attempt to update data in the database has failed. It might be a temporary error.</p> <p>(O)</p> <p>The database might be incomplete, so restart the File Services Manager server, and then try again. If the error continues to occur, acquire all the log files and the management server log files, and then contact maintenance personnel.</p>
KAQM23306-E	An error occurred in the database of the management server. An attempt to delete data from the database has failed. (data = <i>data-that-was-not-deleted</i>)	<p>An attempt to delete data from the database has failed. 		management server log files, and then contact maintenance personnel.
KAQM23308-E	An error occurred in the database of the management server. (details = <i>details</i>)	An error occurred during database processing. It might be a temporary error. (O) Select the target resource from the explorer menu or refresh the tree, and try again. If the error continues to occur, acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM23311-E	The specified object was not found.	The displayed information is not up-to-date. The specified object has already been deleted. (O) Select the target resource from the explorer menu or refresh the tree.
KAQM23314-E	An error occurred during processing for the database of the management server.	The database might be incomplete. (O) The database might be incomplete, so restart the File Services Manager server, and then try again. If the error continues to occur, acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM23315-E	An error occurred while updating the version of the File Services Manager server.	An error occurred while updating the database of the management server. (O) Acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM23320-E	The operation has failed.	There might be a conflict with an internal process or an operation performed by another administrator. (O) Wait a while, and then retry the operation. If the error occurs again, restart File Services Manager. If the problem persists, acquire all the log files and management server log files, and then contact maintenance personnel.
KAQM23500-E	An attempt to create an LU failed because another administrator is currently creating an LU through the same management server.	Another administrator is currently creating an LU. (O)

Message ID	Message	Description and Action
		After the operation by another administrator to create the LU has finished, try again.
KAQM23501-E	An attempt to create an LU has failed. To access the storage system, you must first log in.	To access the storage system, you must first log in. (O) Make sure it is not necessary to log in to the Hitachi Storage Navigator Modular 2 password protection function or the account management function.
KAQM23503-E	Information for a storage system could not be acquired.	Information for a storage system could not be acquired. (O) Acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM23504-E	An attempt to create an LU failed because the maximum number of LUs has been created.	The number of LUs that can be defined for a storage system has reached the maximum. (O) Use Hitachi Storage Navigator Modular 2 or Device Manager to delete any unnecessary LUs defined for the target storage system, and then try again.
KAQM23505-E	An attempt to set a user LU failed because the maximum number of user LUs have been set.	The number of user LUs that can be set has reached the maximum. (O) Use Hitachi Storage Navigator Modular 2 or Device Manager to cancel any unnecessary assigned user LUs, and then try again.
KAQM23506-E	An attempt to create an LU has failed. Creation of a new Parity group was attempted because the existing Parity group did not have enough free space, but the new Parity group could not be created.	The existing Parity group did not have enough free space specified, and there was no disk drive available for creating a new Parity group. (O) To assign the specified capacity, first use Hitachi Storage Navigator Modular 2 or Device Manager to delete any unnecessary LUs. Alternatively, add a new disk drive.
KAQM23507-E	An attempt to create an LU failed. Another administrator might be setting an LU or Parity group in the same storage system.	An LU or Parity group might have been set during creation of the LU. (O) After the operation to set the LU or Parity group being performed by another administrator has finished, try again.

Message ID	Message	Description and Action
KAQM23508-E	An LU was created, but the user LU could not be set. Another administrator might be setting an LU. (LU number (LUN) = <i>created-LU-number (LUN)</i>)	An LU might have been set by another administrator during setting of the user LU. (O) Using Hitachi Storage Navigator Modular 2 or Device Manager, set the user LU by setting the LU specified in the message.
KAQM23509-E	The Parity group was created, but the user LU could not be created. Another administrator might be setting an LU. (Parity group number = <i>created-Parity-group-number</i>)	An LU might have been set by another administrator during creation of the LU. (O) Wait for a while, and then try again.
KAQM23510-E	The Parity group and LU were created, but the user LU could not be set. Another administrator might be setting a user LU. (Parity group number = <i>created-Parity-group-number</i> , LU number (LUN) = <i>created-LU-number (LUN)</i>)	An LU might have been set by another administrator during setting of the user LU. (O) Using Hitachi Storage Navigator Modular 2 or Device Manager, set the user LU by setting the LU specified in the message.
KAQM23511-E	The user LU could not be set. The management server might be attempting to connect with a different storage system. (controller 0 IP address = <i>controller-0-IP-address</i> , controller 1 IP address = <i>controller-1-IP-address</i>)	There might be a problem in the network setting for the storage system. (O) Revise the network settings related to the storage system connections.
KAQM23512-E	The LU could not be created because a communication error occurred. (controller 0 IP address = <i>controller-0-IP-address</i> , controller 1 IP address = <i>controller-1-IP-address</i>)	An attempt to communicate with a storage system has failed. (O) Check the status of the storage system and the network environment, and then try again. If an error occurs again, acquire all the log files and the management server log files, and then contact maintenance personnel.
KAQM23513-E	The user LU could not be set because a communication error occurred. An LU might be being created. (LU number (LUN) = <i>number-of-the-LU-being-created (LUN)</i> , controller 0 IP address = <i>controller-0-IP-address</i> , controller 1 IP address = <i>controller-1-IP-address</i>)	An attempt to communicate with a storage system has failed. (O) Before you register a storage system, make sure the LU automatic creation function supports it. Then, check the status of the storage system and the network environment.

Message ID	Message	Description and Action
		<p>Finally, check whether the LU has been created.</p> <p>If it has been created, use Hitachi Storage Navigator Modular 2 or Device Manager to set the user LU, by setting the LU specified in the message.</p> <p>If the LU has been not created, then try again. If an error occurs again, acquire all the log files and the management server log files, and then contact maintenance personnel.</p>
KAQM23514-E	The LU could not be created because a communication error occurred. A Parity group might be being created. KAQM23851-E	The differential-data snapshot is not unmounted.	The displayed information is not up to date. The differential-data snapshot could not be unmounted. (O) In the snapshot list, check the mount status of the snapshot, and then retry the operation.
KAQM23852-E	The mount point of the specified differential-data snapshot does not exist.	The displayed information is not up to date. (O) In the snapshot list, check the mount status of the snapshot, and then retry the operation.
KAQM23853-E	The specified namespace is for a different purpose.	The specified namespace is for a different purpose. (O) Check and, if necessary, revise the namespace type and content-sharing type of the file system to be created or the share to be created.
KAQM23854-E	Failed to configure versioning for some namespaces. (Number of namespaces that could not be configured = <i>number-of-namespaces</i>)	Configuring the settings failed because some errors occurred. The main cause of the error is as follows: namespace = <i>namespace-name</i> , error message = <i>message-ID</i> , HTTP return code = <i>HTTP-return-code</i> , details = <i>details</i> . (O) Check the error information displayed under Cause to remove the cause of the error. Execute the refresh processing, and then retry the operation.
KAQM23855-E	Shares cannot be added to the specified directory.	A namespace is already assigned to the specified directory. However, the namespace might have been deleted, or it might be unavailable. (O) To add a share to an existing directory, check with the HCP administrator about the status of the namespace (<i>namespace-name</i>).

Message ID	Message	Description and Action
		To begin operation of a new share, specify a different directory or use a command to delete the existing directory and the mapping information for the namespace, and then try to add the share again.
KAQM23856-E	The specified namespace is for a different purpose.	The specified namespace is being used for a different purpose. (O) Make sure that the specified content-sharing type is correct. If the type is correct, make sure that no mistakes exist in the specified namespace name.
KAQM23857-E	The file system could not be created.	The file system cannot be created, because another namespace with the same name is being used for a different purpose. (O) Specify a different file system name, and then try again.
KAQM23858-E	The share settings could not be configured.	The share settings cannot be configured, because the specified namespace is being used for a different purpose. (O) Specify a different namespace name, and then try again.
KAQM23859-E	The file system could not be edited.	The file system cannot be edited, because the specified namespace is being used for a different purpose. (O) To migrate data to the HCP system, create a new file system.

KAQM24 messages

This section explains messages that have a message ID beginning with KAQM24, and the actions to be taken if such messages appear.

Table 5-17 KAQM24 messages

Message ID	Message	Description and Action
KAQM24001-E	An internal error occurred.	A system error occurred. (O) Acquire all the Management log files, and then contact the maintenance

Message ID	Message	Description and Action
		personnel. See the Help for a list of the Management log files.
KAQM24002-E	This function is not supported.	This function cannot be used with this model. (O) Acquire all the Management log files, and then contact the maintenance personnel. See the Help for a list of the Management log files.

KAQM25 messages

This section explains messages that have a message ID beginning with KAQM25, and the actions to be taken if such messages appear.

Table 5-18 KAQM25 messages

Message ID	Message	Description and Action
KAQM25301-I	Usage: <i>command-syntax</i>	No action is required.
KAQM25304-E	There is an error in the specification of an option or parameter (<i>option-name / parameter-name</i>).	There is an error in the specification of an option or parameter. (O) Specify the correct option and parameter, and then re-execute the command.
KAQM25306-E	An attempt to execute the command has failed.	An attempt to generate processes required to execute the command has failed. Temporarily, there might not be enough memory or assignable process IDs. (O) Wait a while, and then re-execute the command. If the error occurs again, acquire all the management log files, and then contact the Support Center. For a list of the management log files, see Help.
KAQM25399-E	An internal error occurred.	A system error occurred. (O) Acquire all the Management log files, and then contact the maintenance personnel. See the Help for a list of the Management log files.

Message ID	Message	Description and Action
KAQM25402-E	The OS cannot be stopped because an attempt to check the cluster status failed.	An attempt to check the cluster status has failed. (O) Make sure that the node is not running, and then re-execute the command. If you want to ignore the error and stop the OS, execute the command with the <code>--force</code> option specified.
KAQM25403-E	The OS cannot be stopped because the node is running.	The node has not stopped. (O) Stop the node, and then re-execute the command. If you want to ignore the error and stop the OS, execute the command with the <code>--force</code> option specified.
KAQM25404-E	The node has not stopped. Also, the OS cannot be stopped because a failover cannot be performed.	The node has not stopped, and the other node in the cluster has not started. (O) Stop the node or start the other node in the cluster, and then re-execute the command.
KAQM25406-E	The OS cannot be restarted because an attempt to check the cluster status failed.	An attempt to check the status of the cluster has failed. (O) Make sure that the node is not running, and then re-execute the command. If you want to ignore the error and restart the OS, execute the command with the <code>--force</code> option specified.
KAQM25407-E	The OS cannot be restarted because the node is running.	The node has not stopped. (O) Stop the node, and then re-execute the command. If you want to ignore the error and restart the OS, execute the command with the <code>--force</code> option specified.
KAQM25408-E	The node has not stopped. Also, the OS cannot be restarted because a failover cannot be performed.	The node has not stopped, and the other node in the cluster has not started. (O) Stop the node or start the other node in the cluster, and then re-execute the command.
KAQM25413-Q	Do you want to stop the OS? (y/n)	No action is required.

Message ID	Message	Description and Action
KAQM25414-Q	Do you want to restart the OS? (y/n)	No action is required.
KAQM25416-E	The OS cannot be started because communication with BMC on the other node in the cluster cannot be established.	There is a problem with the communication processing with BMC on the other node in the cluster. (O) Wait a while, and then re-execute the command. If the error occurs again, check for network errors. If there are no problems, acquire all of the log data, and then contact maintenance personnel. Maintenance personnel will resolve the problem by following the maintenance manual.

KAQM26 messages

This section explains messages that have a message ID beginning with KAQM26, and the actions to be taken if such messages appear.

Table 5-19 KAQM26 messages

Message ID	Message	Description and Action
KAQM26000-I	The server has started.	No action is required.
KAQM26001-I	The server has stopped.	No action is required.
KAQM26002-I	A user (<i>user-name</i>) has logged in.	No action is required.
KAQM26003-I	A user (<i>user-name</i>) has logged out.	No action is required.
KAQM26004-I	The basic settings for a node (<i>node-name</i>) have been completed.	No action is required.
KAQM26005-I	The resource settings for a node (<i>node-name</i>) have been completed.	No action is required.
KAQM26006-I	A license (<i>license-name</i>) has been activated on a node (<i>node-name</i>).	No action is required.
KAQM26010-I	The time settings for a node (<i>node-name</i>) have been completed.	No action is required.
KAQM26011-I	A node (<i>node-name</i>) is now restarting.	No action is required.

Message ID	Message	Description and Action
KAQM26012-I	The HCP settings for a node (<i>node-name</i>) have been completed.	No action is required.
KAQM26015-I	The connection test with an HCP system (<i>HCP-system-name</i>) has been completed.	No action is required.
KAQM26018-I	A file share (<i>share-name</i>) was added to a file system (<i>file-system-name</i>).	No action is required.
KAQM26019-I	A namespace (<i>namespace-name</i>) was created for an HCP tenant (<i>tenant-name</i>).	No action is required.
KAQM26020-I	A migration policy was set for a file system (<i>file-system-name</i>).	No action is required.
KAQM26021-I	CIFS user authentication was set for a node (<i>node-name</i>).	No action is required.
KAQM26024-I	The quota of a namespace (<i>namespace-name</i>) was edited for an HCP tenant (<i>tenant-name</i>).	No action is required.
KAQM26029-I	A file system (<i>file-system-name</i>) migration task was deleted.	No action is required.
KAQM26033-E	HCP settings have not been specified.	The operation cannot be performed because HCP settings have not been specified. (O) Use the Service Configuration Wizard to specify the HCP settings, and then retry the operation.
KAQM26035-E	A file system could not be created.	The unused capacity of the volume group or tenant is insufficient. (O) Check the unused capacity of the volume group or tenant. Free up capacity as necessary, and then retry the operation.
KAQM26037-E	An attempt to communicate with a node failed. (IP address = <i>IP-address</i>)	An attempt to communicate with a node failed. (O) Check the network settings and node status, and then retry the operation.
KAQM26040-E	The file system could not be deleted.	The file system cannot be deleted because one or more files with retention periods still exist on the file system.

Message ID	Message	Description and Action
		(O) Delete the file system any time after <i>date-from-which-file-system-can-be-deleted</i> .
KAQM26041-E	Information acquisition failed.	See message. (O) See the message, and if necessary, retry the operation.
KAQM26042-E	Setup failed.	See message. (O) See the message, and if necessary, retry the operation.
KAQM26043-W	A namespace with the same name already exists.	An existing namespace was specified. (O) Confirm whether it is okay to use a namespace already in use.
KAQM26045-E	Login failed.	The login authentication function might temporarily not be running. (O) Wait a while, and then retry the operation. If the error occurs repeatedly, contact maintenance personnel.
KAQM26046-E	Processing failed.	A temporary error occurred. (O) Wait a while, and then retry the operation. If the error occurs repeatedly, acquire all the log files, and then contact maintenance personnel.
KAQM26047-E	An attempt to start the server has failed. (details = <i>details</i>)	A temporary error occurred. (O) Wait a while, and then retry the operation. If the error occurs repeatedly, acquire all the log files, and then contact maintenance personnel.
KAQM26048-E	An attempt to stop the server has failed. (details = <i>details</i>)	A temporary error occurred. (O) Wait a while, and then retry the operation. If the error occurs repeatedly, acquire all the log files, and then contact maintenance personnel.
KAQM26049-E	Your session is invalid.	Your session is invalid. (O)

Message ID	Message	Description and Action
		Logout, and then login again.
KAQM26050-E	An error occurred while upgrading the server version.	An error occurred while upgrading the server database. (O) Acquire all the log files, and then contact maintenance personnel.
KAQM26051-E	Processing failed.	The information is not up-to-date. (O) Refresh the information, and then verify that the information is up-to-date.
KAQM26052-E	Processing failed.	A required license is not set. (O) Confirm that a required license is set.
KAQM26062-E	The file system could not be edited.	A GUI operation cannot be performed because a file share, namespace, or migration policy is not set for the file system. The file system might not be in an operable status. (O) Check the status of the file system, and confirm whether a file share, namespace or migration policy is set. If you want to perform the operation on the file system in this status, use commands.
KAQM26063-E	The file system could not be deleted.	The file system cannot be deleted because there are one or more files with infinite retention periods. (O) The file system cannot be deleted.
KAQM26064-E	An error occurred while setting a license.	A file that does not exist was specified. (O) Specify a valid file.
KAQM26066-W	The filter and column display conditions cannot be saved. Too many filters are specified or the filter conditions are too long. Revise the filter conditions.	Too many filters are specified or the filter conditions are too long. (O) Revise the filter conditions.
KAQM26067-W	Displaying the screen will take some time, because multiple operations were performed in succession. Wait a while, and then continue the operation.	Multiple operations were performed in succession. (O) Wait a while, and then continue the operation.

Message ID	Message	Description and Action
KAQM26069-W	OS boot processing is not finished. Please wait until it is finished.	Operations might not be performed properly because OS boot processing is not finished. (O) Wait a while, and then click the [Retry] button. Perform the intended operations only after confirming that this message is not displayed. If this message is displayed repeatedly, acquire all the log files, and then contact maintenance personnel.
KAQM26070-E	An invalid URL was specified.	The format of the specified URL is invalid. (O) Specify a valid URL.
KAQM26102-E	Name resolution of the HCP system failed.	Name resolution could not be properly performed. Communication with an HCP system might be temporarily disabled, due to a problem such as a network error or a high load on the HCP system. (O) Wait a while, and then retry the operation. If the error occurs again, ensure that name resolution is possible in the network environment, and that the value specified as the externally visible HCP host is correct. Also, see the online Help troubleshooting section. After that, use the Configuration Wizard to test the connection.
KAQM26103-E	A timeout occurred during communication with HCP.	There might be a problem with the HCP system or the network. (O) Use the online Help troubleshooting section to identify the cause of the error. Remove the cause of the error, and then retry the operation. If the problem persists, acquire all the log data, and then contact maintenance personnel.
KAQM26106-E	The download failed.	An error occurred while transferring or saving data. (O) Confirm the following, and then retry the operation: 1. The connection status, by testing the connection from the Service Configuration Wizard

Message ID	Message	Description and Action
		2. You have the write permission for the storage location, and there is enough capacity at the storage location
KAQM26108-W	A data access account with the same name already exists.	An existing data access account was specified. (O) Ask the HCP administrator to create a read-only data-access account for the namespace used for content sharing.
KAQM26109-W	A namespace and data access account with the same name already exist.	An existing namespace and data access account were specified. (O) Confirm that using the namespace that already exists will not cause any problems. Ask the HCP administrator to re-create the data access account.
KAQM26110-E	Communication with the HCP system failed. Method: <i>Method</i> URI: <i>URI</i>	The following error was received. HTTP return code: <i>HTTP-return-code</i> Details: <i>Details</i> The cause of the error might be due to either the error displayed in the message output to "Details", or due to one of the following reasons: <ul style="list-style-type: none"> • The input information is invalid. • Your account does not have the proper permissions. • The HCP management API function is not enabled. • HCP is undergoing maintenance. • The configured proxy server environment settings are invalid. • If replication functions are being used in an HCP system, information has not yet been applied to a replica HCP system. (O) When this message is output for a connection test or a password change: Take action in the following order: <ul style="list-style-type: none"> • If a message is output for "Details" under "Factor", confirm the cause of the error from that message, and then take action accordingly. • Confirm that there are no errors in the input information. • If a proxy server is being used, make sure that the environment

Message ID	Message	Description and Action
		<p>settings for the proxy server are configured as described in the <i>Installation and Configuration Guide</i>.</p> <ul style="list-style-type: none"> If replication functions are being used in an HCP system, wait a while, and then try the operation again. <p>If you cannot resolve the problem, contact the HCP administrator.</p> <p>In other cases:</p> <p>Use the Configuration Wizard to perform a connection test with the HCP system and confirm the connection status. If the error occurs after the connection test succeeds, it is possible that HCP is undergoing maintenance. In such a case, contact the HCP administrator.</p>
KAQM26111-E	<p>Communication with the HCP system failed.</p> <p>Method: <i>Method</i></p> <p>URI: <i>URI</i></p>	<p>The following error was received.</p> <p>HTTP return code: <i>HTTP-return-code</i></p> <p>Details: <i>Details</i></p> <p>(O)</p> <p>If a message is output for "Details" under "Factor", read the message, and then take action accordingly. If no action can be taken, take a screenshot, and then contact the HCP administrator.</p>
KAQM26112-E	<p>Communication with the HCP system failed.</p> <p>Method: <i>Method</i></p> <p>URI: <i>URI</i></p>	<p>The following error was received.</p> <p>HTTP return code: <i>HTTP-return-code</i></p> <p>Details: <i>Details</i></p> <p>(O)</p> <p>Check the input values, and then retry the operation. If a message is output for "Details" under "Factor", read the message, and then take action accordingly. If the problem persists, take a screenshot, and then contact the HCP administrator.</p>
KAQM26113-E	<p>Communication with the HCP system failed.</p> <p>Method: <i>Method</i></p> <p>URI: <i>URI</i></p>	<p>The following error was received.</p> <p>HTTP return code: <i>HTTP-return-code</i></p> <p>Details: <i>Details</i></p> <p>(O)</p> <p>If a message is output for "Details" under "Factor", read the message, and then take action accordingly. If no action can be taken, acquire all the log</p>

Message ID	Message	Description and Action
		files, and then contact maintenance personnel.
KAQM26114-E	Communication with the HCP system failed. Method: <i>Method</i> URI: <i>URI</i>	The following error was received. HTTP return code: <i>HTTP-return-code</i> Details: <i>Details</i> (O) If a message is output for "Details" under "Factor", read the message, and then take action accordingly. If no action can be taken, acquire all the log files and management server log files, and then contact maintenance personnel.
KAQM26115-W	The tenant administrator account does not have the proper permissions.	The specified tenant administrator account does not have the proper permissions. (O) After the Monitor, Administrator, and Compliance permissions have been set for the tenant administrator account, retry the operation. Ask the HCP administrator to add the proper permissions to the tenant administrator account.
KAQM26116-E	The policy was not created.	An existing policy was specified. (O) Change the name of the existing policy, and then retry the operation.
KAQM26118-E	Communication with the HCP system failed. Method: <i>Method</i> URI: <i>URI</i>	The following error was received. return code: <i>return-code</i> Details: <i>Details</i> (O) If a message is output for "Details" under "Factor", read the message, and then take action accordingly. If no action can be taken, acquire all the log files and management server log files, and then contact maintenance personnel.
KAQM26119-E	Name resolution of the replica system failed.	Name resolution could not be properly performed. Communication with an HCP system might be temporarily disabled, due to a problem such as a network error or a high load on the HCP system. (O) Wait a while, and then retry the operation. If the error occurs again, ensure that name resolution is possible

Message ID	Message	Description and Action
		in the network environment, and that the value specified as the externally visible replica HCP host is correct. Also, see the online Help troubleshooting section. After that, use the Configuration Wizard to test the connection.
KAQM26120-W	The HCP replication function cannot be used.	The replication function is not enabled on the primary system. (O) Ask the HCP administrator to enable the replication function on the primary system.
KAQM26121-W	The HCP replication function cannot be used.	The specified system is not in a replication configuration. (O) Confirm the correct replica system information with the HCP administrator.
KAQM26122-I	The system could not verify whether the HCP system is in a replication configuration.	An HCP system was specified that could not be verified as being in a replication configuration. (O) No action is required.
KAQM26123-E	Communication with the HCP system failed. Method: <i>Method</i> URI: <i>URI</i>	The following error was received. HTTP return code: <i>HTTP-return-code</i> Details: <i>Details</i> The error displayed in the message output to "Details" might have occurred, or a tenant administrator account might not be set up for the system. (O) If a message is output to "Details" under "Factor", take action according to the instructions in the message. If no action can be taken or a message is not output, perform either of the following to set up a tenant administrator account so that the HCP management API can be used: (1) If a data access account is set up in the system, ask the HCP administrator to use the same user name and password to create a tenant administrator. (2) Follow the instructions in online Help and use the Configuration Wizard

Message ID	Message	Description and Action
		to set up a tenant administrator account.
KAQM26124-E	An attempt to upload a file failed.	You cannot upload files over 100 MB. (O) Verify that the correct file was specified.
KAQM26125-E	This operation cannot be performed.	The system does not support this operation. (O) Do not execute this operation.
KAQM26126-W	An attempt to refresh the information failed. Wait about five minutes and then refresh the screen.	An attempt to get or refresh information failed. (O) Wait about five minutes and then refresh the screen.
KAQM26128-I	The share " <i>share-name</i> " has been released. Files in the share were not deleted. To end operation of the subtree that uses the namespace, use a command to delete the target directory.	No action is required.
KAQM26129-E	The list of files that are resident in the cache cannot be downloaded.	The setting for acquiring the data of files that are resident in the cache is disabled. (O) Use the command to enable acquisition of the data of files that are resident in the cache, and then try again.
KAQM26130-E	Failed to change the mount setting of differential-data snapshots.	The mount setting cannot be changed to on-demand mounting, because the differential-data snapshots that were automatically created were mounted. (O) Execute refresh processing, and then try again.
KAQM26134-E	An internal error occurred.	An internal error occurred. (O) Acquire all the log data, and then contact maintenance personnel.
KAQM26135-E	The specified file system does not exist.	The displayed information is not up-to-date. Processing cannot be executed because the specified file system does not exist in the system. (O)

Message ID	Message	Description and Action
		Execute refresh processing, check the file system, and then try again.
KAQM26139-E	A system error occurred.	A system error occurred. (O) Acquire all the log data, and then contact maintenance personnel.
KAQM26143-E	An error has occurred in the logical volume of the file system or work space.	An error has occurred in the logical volume of the file system or the work space. This message might also be output when a resource group is not running normally. (O) Check the resource group status. If the statuses are normal and you still cannot identify the cause of the problem, follow the relevant recovery procedure (for when an access error occurs in the device file) in Help.
KAQM26500-I	Processing completed. (resource name = <i>resource-name</i> , method = <i>method</i>)	No action is required.
KAQM26501-E	The request XML structure is invalid, or a required property is not specified. (resource name = <i>resource-name</i> , method = <i>method</i>)	The request XML structure is invalid, or a required property is not specified. (O) Check the XML structure, and then retry the operation.
KAQM26502-E	The specified value of a request XML property is invalid. (specified value = <i>specified-value</i> , resource name = <i>resource-name</i> , method = <i>method</i>)	The specified value of a request XML property is invalid. (O) Specify a valid value for the request XML property, and then retry the operation.
KAQM26503-E	An authentication error occurred.	The user ID or password is invalid or not specified. If account lockout is enabled, your account might have been locked. (O) Specify a valid user ID and password, and then retry the operation. If account lockout is enabled, cancel account lockout and try again. If the error still occurs, inform maintenance personnel.
KAQM26504-E	The specified resource does not exist. (resource name = <i>resource-name</i> , system configuration = <i>system-configuration</i>)	The specified resource does not exist in this environment. (O) Specify a valid resource, and then retry the operation.

Message ID	Message	Description and Action
KAQM26505-E	The value specified for the resource header is invalid. (specified value = <i>specified-value</i> , resource name = <i>resource-name</i> , method = <i>method</i>)	The value specified for the resource header is invalid. (O) Specify a valid value, and then retry the operation.
KAQM26506-E	An unusable method was specified. (resource name = <i>resource-name</i> , method = <i>method</i> , system configuration = <i>system-configuration</i>)	The resource is unable to use the specified method. (O) Specify a method that can be used by the target resource, and then retry the operation. Usable methods can be found by requesting the OPTIONS method.
KAQM26507-E	The specified value of a request XML property is invalid. (resource name = <i>resource-name</i> , method = <i>method</i>)	The specified value of a request XML property is invalid. (O) Specify a valid value for the request XML property, and then retry the operation.
KAQM26508-I	A request message has received. (method = <i>method</i> , resource name = <i>resource-name</i>)	No action is required.
KAQM26509-I	A request process has finished. (method = <i>method</i> , resource name = <i>resource-name</i>)	No action is required.
KAQM26510-E	A timeout occurred during internal processing.	Possible causes are as follows: <ul style="list-style-type: none"> The physical node or virtual server is under a heavy load. At least one of the steps required for the functionality for linking with array volume replication functions has not been completed on the physical node or virtual server. A response from an external server took a while. (O) Check the status of the physical node or virtual server, and then fix the cause of the error. Since processing might have also executed after the timeout occurred, execute refresh processing, check the status and, if necessary, execute the operation again.

Message ID	Message	Description and Action
KAQM26511-E	Specify a value that satisfies the password policy.	The specified password does not satisfy the password policy. (Password policy: <i>password-policy</i>) (O) Specify a value that satisfies the password policy.
KAQM26512-W	OS boot processing is not finished. Please wait until it is finished.	Operations might not be performed properly because OS boot processing is not finished. (O) Wait a while, and then check the boot status of the physical node or virtual server OS. Perform the intended operations only after confirming that boot processing has finished. If boot processing does not finish, acquire all the log files, and then contact maintenance personnel.
KAQM26516-E	The specified file system does not exist. (file system name = <i>file-system-name</i>)	The displayed information is not up-to-date. Processing cannot be executed because the specified file system does not exist in the system. (O) Execute refresh processing, check the file system, and then try again.
KAQM26517-E	The specified LU does not exist. (LU name = <i>LU-name,LU-name ...</i>)	The displayed information is not up to date. Processing cannot be executed because the specified LU does not exist in the system. The LU might have been deleted. (O) Execute refresh processing, check the list of LUs, and then retry the operation.
KAQM26518-E	The specified LU is being used. (LU name = <i>LU-name,LU-name ...</i>)	The displayed information is not up-to-date. The specified LU is being used for another purpose. (O) Execute refresh processing, check the list of LUs, and then try again.
KAQM26519-E	The operation on the file system cannot be executed because a failover has occurred.	The displayed information is not up-to-date. The operation on the file system cannot be executed because a failover has occurred. (O) Execute refresh processing, and then check the status of the file system. Perform failback to bring the system

Message ID	Message	Description and Action
		back to the normal state, and then try again.
KAQM26520-E	A system error occurred.	A system error occurred. (O) Acquire all the log data, and then contact maintenance personnel.
KAQM26521-E	An LU smaller than the stipulated size exists in the specified LUs, or the total capacity of the specified LUs is insufficient as the required capacity of the work space.	The displayed information is not up-to-date. An LU smaller than the stipulated size exists in the specified LUs, or the total capacity of the specified LUs is insufficient as the required capacity of the work space. (O) Execute refresh processing, check the list of LUs, and then try again.
KAQM26522-E	An attempt to connect to an LU has failed.	An access error has occurred in the LU. (O) Execute refresh processing, check the connection status of the specified LU on both nodes, and then retry the operation. If you are using local data encryption, check the system messages on both nodes to see whether the KAQM05256-E message, or a message ranging from KAQM05258-E to KAQM05264-E was output during OS startup. If an error occurred, take action as described in the error message, and then retry the operation. If an error occurs again, follow the recovery procedure in online Help for when a device file access error occurs.
KAQM26523-E	The total size of the specified LUs is too large.	The displayed information is not up-to-date. The total size of the specified LUs is too large. (O) Execute refresh processing, specify LUs of an appropriate size, and then try again.
KAQM26524-E	An error has occurred in the logical volume of the file system or work space. (file system name = <i>file-system-name</i>)	An error has occurred in the logical volume of the file system or the work space. This message might also be output when a cluster, node, or resource group is not running normally. (O) Check the cluster, node, and resource group status. If the statuses are

Message ID	Message	Description and Action
		normal and you still cannot identify the cause of the problem, follow the relevant recovery procedure (for when an access error occurs in the device file) in Help.
KAQM26525-E	If the specified LUs are added, the total size of the work space will exceed the maximum.	The displayed information is not up-to-date. If the specified LUs are added, the total size of the work space will exceed the maximum. (O) Execute refresh processing, and then try again.
KAQM26526-E	If the specified LUs are added, the total number of LUs of the work space will exceed the maximum.	The displayed information is not up-to-date. If the specified LUs are added, the total number of LUs of the work space will exceed the maximum. (O) Refresh the browser window and then try again.
KAQM26527-E	The specified LU does not belong to the same storage system as the LUs that make up the file system.	The displayed information is not up-to-date. (O) Execute refresh processing, check the LUs, and then try again.
KAQM26528-E	The specified device size is insufficient for the required capacity of the work space.	The displayed information is not up-to-date. (O) Refresh the information, check the device size, and then try again.
KAQM26529-E	The work space cannot be set up because the specified file system is too large.	The displayed information is not up-to-date. The work space cannot be set up because the specified file system is too large. (O) Execute refresh processing, and then check the size of the file system.
KAQM26530-E	The total of the following exceeds the maximum: the number of LUs used in the file system, and the number of specified LUs.	The information displayed in the browser window is not up-to-date. The total of the following exceeds the maximum: the number of LUs used in the file system, and the number of specified LUs. (O) Refresh the browser window and then try again.

		Specify the path name used for storing the database files without a period (.) at the beginning or end of the path name.
KAQM30086-W	The SSL certificate used for communication with the node could not be imported to the keystore. After installation finishes, import the certificate by following the instructions in the manual.	The password for the SSL certificate used for communication with the node has been changed. (O) After installation finishes, import the certificate by following the instructions in the manual.
KAQM30088-E	An attempt to acquire registry information has failed.	The OS might have a problem. (O) Acquire the trace information at the time of setup, and then contact maintenance personnel.
KAQM30089-E	Hitachi File Services Manager cannot be installed in the specified folder.	In the window used for setting the installation folder, the root of a drive (e.g., C:\) was specified in the [Installation destination for Hitachi File Services Manager] text box. (O) Please specify another folder.
KAQM30090-E	Hitachi File Services Manager cannot be installed because a Hitachi Command Suite product has already been installed at the root of the drive (e.g., C:\).	Hitachi File Services Manager cannot be installed because a Hitachi Command Suite product has already been installed at the root of the drive (e.g., C:\). (O) Follow the instructions in the manual in order to reinstall Hitachi File Services Manager.
KAQM30091-E	An upgrade installation from Hitachi NAS Manager to Hitachi File Services Manager requires at least 500 MB of free space. There is not enough free space for the upgrade installation.	There is not enough free space for the upgrade installation. (O) Free up enough space on the disk drive that contains the installation path.
KAQM30092-E	Migration of the database from Hitachi NAS Manager to Hitachi File Services Manager has failed.	An error occurred during database processing. (O) Collect the maintenance information and the trace information from when the upgrade installation was performed for the following programs, and then contact maintenance personnel: - Hitachi File Services Manager - Hitachi NAS Manager

Message ID	Message	Description and Action
		- Hitachi Command Suite Common Component
KAQM30093-E	An attempt to install Hitachi File Services Manager has failed.	Hitachi File Services Manager cannot be installed because the Hitachi File Services Manager or Hitachi NAS Manager registry is invalid. (O) Acquire the trace information at the time of setup, and then contact maintenance personnel.
KAQM30094-E	An attempt to install Hitachi File Services Manager has failed.	An internal error occurred during the Hitachi File Services Manager installation. (O) Acquire the trace information at the time of setup, and then contact maintenance personnel.
KAQM30095-E	Installation of the shared library failed.	A temporary error occurred, or the Windows Installer version might be old. (O) Install the latest version of Windows Installer, and then retry the installation. If the problem persists, acquire the Hitachi File Services Manager and Hitachi Command Suite Common Component maintenance information, collect the trace information at the time the setup was attempted, and then contact maintenance personnel.
KAQM30096-E	Post-processing for an update of a Hitachi File Services Manager library file has failed.	Possible causes are as follows: - You do not have delete permission for the installation folder. - A disk error occurred. (O) Depending on the cause, take either of the following actions: - Make sure you have delete permission for the installation folder. - Make sure the installation-destination disk drive is normal.

KAQM32 messages

This section explains messages that have a message ID beginning with KAQM32, and the actions to be taken if such messages appear.

Table 5-22 KAQM32 messages

Message ID	Message	Description and Action
KAQM32001-I	The FC path is set. To enable the setting, the OS must be restarted.	The FC path is set according to the structure of the specified file. (O) Restart the OS.
KAQM32002-E	The specified file does not exist in the home directory. (file name= <i>specified-file-name</i>)	The specified file does not exist in the home directory. (O) Confirm that the specified file exists in the home directory.
KAQM32003-E	The specified file name includes an unusable character.	The specified file name includes an unusable character. (O) Enter a valid file name, and then try again.
KAQM32004-E	The definition of a path to the system LU has changed.	The definition of a path to the system LU has changed. If processing continues, the OS might not start. (O) Check the definition in the specified file, and then try again.
KAQM32005-E	An attempt to perform an operation on the system file (<i>target-file-name</i>) has failed.	There might be a problem in the processing of an OS disk or the system file. (O) Make sure that the OS disk settings are correct, and that no error has occurred. If the problem cannot be resolved, acquire all the management log files, and then contact maintenance personnel. For a list of the management log files, see Help.
KAQM32006-E	The persistent binding file that defines the structure of the current FC path does not exist.	(1) The installation might have failed. (2) A problem might exist in the processing of an OS disk or the system file. (O) (1) See the installation log to check that the installation was successful. (2) Make sure that the OS disk settings are correct, and that no error has occurred. If the problem cannot be resolved, acquire all the management log files, and then contact maintenance personnel. For a list of the management log files, see Help.

Message ID	Message	Description and Action
KAQM32007-E	An attempt to set the persistent binding file has failed.	A system error might have occurred. (O) Acquire all the management log files, and then contact maintenance personnel. For a list of the management log files, see Help.
KAQM32008-Q	Do you want to set the FC path according to the structure of the specified persistent binding file? (y/n)	This message is output before the FC path is set. (O) Enter y or n.
KAQM32009-E	An attempt to switch the FC path online has failed. (FC path name= <i>FC-path-name</i>)	An error might have occurred in hardware that connects a node to a storage system, or an LU error might have occurred. (O) Check the connection status of the FC cable. If the connection statuses of the FC cables are normal, check the statuses of the LUs. If the problem cannot be resolved, acquire all the management log files, and then contact maintenance personnel. For a list of the management log files, see Help.
KAQM32010-E	An attempt to switch the FC path offline has failed. (FC path name= <i>FC-path-name</i>)	An error might have occurred in hardware that connects a node to a storage system, or an LU error might have occurred. (O) Check the connection status of the FC cable. If the connection statuses of the FC cables are normal, check the statuses of the LUs. If the problem cannot be resolved, acquire all the management log files, and then contact maintenance personnel. For a list of the management log files, see Help.
KAQM32011-E	The specified FC path does not exist.	The name of the specified FC path is incorrect, or the specified FC path does not exist. (O) Specify a valid FC path.
KAQM32012-E	An attempt to set the persistent binding file has failed.	The format of the information specified in the persistent binding file is incorrect. (O)

Message ID	Message	Description and Action
		Check the format of the information specified in the persistent binding file, and then try again.
KAQM32013-E	An attempt to read the persistent binding file that defines the current FC path configuration has failed.	<p>1) The installation might have failed.</p> <p>2) A problem might exist in the processing of an OS disk or the system file.</p> <p>(O)</p> <p>1) See the installation log to check that the installation was successful.</p> <p>2) Make sure that the OS disk settings are correct, and that no error has occurred. If the problem cannot be resolved, acquire all the management log files, and then contact maintenance personnel. For a list of the management log files, see Help.</p>
KAQM32014-E	An attempt to switch the FC path offline has failed.	<p>The status of the switch-destination FC path is not Online, or a switch-destination FC path does not exist.</p> <p>(O)</p> <p>Check the status of the FC path. If the status of the switch-destination FC path is not Online, recover the path to the Online status, and then try again. If a switch-destination FC path does not exist, set it up.</p>
KAQM32015-E	An attempt to acquire information about the FC path has failed.	<p>A temporary error might have occurred because the system is busy.</p> <p>(O)</p> <p>Try again. If this error occurs repeatedly, acquire all the management log files, and then contact maintenance personnel. For a list of the management log files, see Help.</p>
KAQM32016-E	An attempt to acquire information about the persistent binding file has failed.	<p>(1) The installation might have failed.</p> <p>(2) A problem might exist in the processing of an OS disk or the system file.</p> <p>(O)</p> <p>(1) See the installation log to check that the installation was successful.</p> <p>(2) Make sure that the OS disk settings are correct, and that no error has occurred. If the problem cannot be resolved, acquire all the management log files, and then contact maintenance personnel. For a list of the management log files, see Help.</p>

Message ID	Message	Description and Action
KAQM32017-E	An attempt to set the environment of the FC path has failed.	A system error might have occurred. The setting might be temporarily enabled, but after the OS is restarted the setting will be disabled. (O) Acquire all the management log files, and then contact maintenance personnel. For a list of the management log files, see Help.
KAQM32018-E	An attempt to acquire information about the environment settings of the FC path has failed.	A temporary error might have occurred because the system is busy. (O) Try again. If this error occurs repeatedly, acquire all the management log files, and then contact maintenance personnel. For a list of the management log files, see Help.
KAQM32019-W	An FC path is not in a normal state.	An FC cable might be disconnected or an LU error might have occurred. (O) Check the connection statuses of the FC cables. If the connection statuses of the FC cables are normal, check the statuses of the LUs. After the FC path is in a normal state, use the <code>fponline</code> command to switch the FC path to Online.
KAQM32020-W	An LU error might have occurred.	An LU error might have occurred. (O) After the cause of the error has been removed, use the <code>fponline</code> command to switch the FC path to Online.
KAQM32021-W	At least one FC path has the Partially Online status.	At least one FC path has the Partially Online status. At least one LU cannot be accessed. (O) Use the <code>fponline</code> command to switch the FC path to Online.
KAQM32022-W	The assignment of LUs to corresponding host groups differ between each switch-destination FC path.	The same LUs have not been assigned to each host group corresponding to the switch-destination FC path. (O) Check whether the same LUs have been assigned to each host group corresponding to the switch-destination FC path.

Message ID	Message	Description and Action
KAQM32023-W	An attempt to acquire the status of the FC path has failed.	<p>The host port or storage port might not have been detected. Alternatively, an LU has not been assigned to the host group corresponding to the target FC path.</p> <p>(O)</p> <p>Make sure that a HBA card has been inserted. If it is already inserted, make sure that the WWN for the FC port on the storage system side is correct. If it is correct, check the connection statuses of the FC cables, the settings for FC switches, and the settings for the storage array system. If their statuses and settings are correct, make sure that an LU has been assigned to the host group corresponding to the target FC path.</p>
KAQM32024-E	An attempt to switch one or more FC paths online has failed.	<p>One or more of the FC paths to be switched online are in the "Unknown" status.</p> <p>(O)</p> <p>Make sure that a HBA card has been inserted. If it is already inserted, make sure that the WWN for the FC port on the storage system side is correct. If it is correct, check the connection statuses of the FC cables, the settings for FC switches, and the settings for the storage array system. If their statuses and settings are correct, make sure that an LU has been assigned to the host group corresponding to the target FC path.</p>
KAQM32025-E	An attempt to switch one or more FC paths online has failed.	<p>One or more of the FC paths to be switched online are in the "Configuration Mismatch" status.</p> <p>(O)</p> <p>Check whether the same LUs have been assigned to each host group corresponding to the switch-destination FC path.</p>
KAQM32026-E	An attempt to switch one or more FC paths offline has failed.	<p>One or more of the FC paths to be switched offline are in the "Unknown" status.</p> <p>(O)</p> <p>Make sure that a HBA card has been inserted. If it is already inserted, make sure that the WWN for the FC port on the storage system side is correct. If it is correct, check the connection statuses of the FC cables, the settings</p>

Message ID	Message	Description and Action
		for FC switches, and the settings for the storage array system. If their statuses and settings are correct, make sure that an LU has been assigned to the host group corresponding to the target FC path.
KAQM32027-E	An attempt to switch one or more FC paths offline has failed.	One or more of the FC paths to be switched offline are in the "Configuration Mismatch" status. (O) Check whether the same LUs have been assigned to each host group corresponding to the switch-destination FC path.
KAQM32028-E	The value specified for the sequential access count is outside the valid range. (sequential access count = <i>specified-sequential-access-count</i>)	The value specified for the sequential access count is outside the valid range. (O) Specify a value in the range from 1 to 65,535, and then try again.
KAQM32030-E	Setting an FC path failed because the cluster is not stopped.	The cluster is not stopped. (O) Stop the cluster, and then try again.
KAQM32031-E	Setting an FC path failed because the cluster status could not be acquired.	The failover function returned an error. (O) Acquire all the management log files and cluster log files, and then contact maintenance personnel. For a list of these files, see the online Help.
KAQM32033-E	An attempt to set the environment of an FC path failed because the node status is not UP or INACTIVE.	The node status is not UP or INACTIVE. (O) Check the node status, and then try again.
KAQM32036-E	An attempt to change the operation mode of FC path recognition has failed.	A system error might have occurred. (O) Acquire all the management log files, and then contact maintenance personnel. For a list of the management log files, see Help.
KAQM32037-E	An attempt to acquire information about the operation mode of FC path recognition failed.	A temporary error might have occurred because the system is busy. (O) Try again. If this error occurs repeatedly, acquire all the management log files, and then contact maintenance personnel. For a list of the management log files, see Help.

Message ID	Message	Description and Action
KAQM32038-Q	Performance might decrease when the load-balance function is disabled. Do you still want to change the setting? (y/n)	This confirmation message is output whenever the load-balance function is disabled. (O) Enter y or n.
KAQM32039-E	A system error occurred.	There might be a problem in the processing of an OS disk or the system file. (O) Make sure that the OS disk settings are correct, and that no error has occurred. If the problem cannot be resolved, acquire all the management log files, and then contact maintenance personnel. For a list of the management log files, see Help.
KAQM32040-W	The fixed GID allocated to the FC path has reached the threshold.	The fixed GID allocated to the FC path has reached the threshold. (O) Use the <code>fpgidmapdel</code> command to initialize the fixed GID map.
KAQM32041-E	The fixed GID allocated to the FC path exceeds the maximum value.	The fixed GID allocated to the FC path exceeds the maximum value. (O) Use the <code>fpgidmapdel</code> command to initialize the fixed GID map.
KAQM32042-E	The value specified for the path health check interval is outside the valid range. (path health check interval = <i>specified-path-health-check-interval</i>)	The value specified for the path health check interval is outside the valid range. (O) Specify a value in the range from 1 to 1,440, and then try again.
KAQM32043-E	The specified host port does not exist.	The specified host port is invalid. (O) Specify a valid host port.
KAQM32044-E	The specified storage port does not exist.	The specified storage port is invalid. (O) Specify a valid storage port.
KAQM32045-E	An attempt to switch one or more FC paths connected to a host port online has failed. (host port = <i>host-port-name</i>)	There might be a failure in the hardware connecting the node to the storage system, or an error might have occurred in an LU. (O) Check the connection statuses of the FC cables. If the connection statuses of

Message ID	Message	Description and Action
		the FC cables are normal, check the statuses of the LUs. If the problem cannot be resolved, acquire all the management log files, and then inform maintenance personnel. For a list of the management log files, see online Help.
KAQM32046-E	An attempt to switch one or more FC paths connected to a storage port online has failed. (model = <i>model-name</i> , serial number = <i>serial-number</i> , storage port = <i>storage-port-name</i>)	There might be a failure in the hardware connecting the node to the storage system, or an error might have occurred in an LU. (O) Check the connection statuses of the FC cables. If the connection statuses of the FC cables are normal, check the statuses of the LUs. If the problem cannot be resolved, acquire all the management log files, and then inform maintenance personnel. For a list of the management log files, see online Help.
KAQM32047-E	An attempt to switch one or more FC paths connected to a host port offline has failed. (host port = <i>host-port-name</i>)	There might be a failure in the hardware connecting the node to the storage system, or an error might have occurred in an LU. (O) Check the connection statuses of the FC cables. If the connection statuses of the FC cables are normal, check the statuses of the LUs. If the problem cannot be resolved, acquire all the management log files, and then inform maintenance personnel. For a list of the management log files, see online Help.
KAQM32048-E	An attempt to switch one or more FC paths connected to a storage port offline has failed. (model = <i>model-name</i> , serial number = <i>serial-number</i> , storage port = <i>storage-port-name</i>)	There might be a failure in the hardware connecting the node to the storage system, or an error might have occurred in an LU. (O) Check the connection statuses of the FC cables. If the connection statuses of the FC cables are normal, check the statuses of the LUs. If the problem cannot be resolved, acquire all the management log files, and then inform maintenance personnel. For a list of the management log files, see online Help.
KAQM32049-E	The specified host port includes one or more FC paths	An unsupported storage system might be connected, there might be a failure in the hardware connecting a node and

Message ID	Message	Description and Action
	that cannot be switched online.	<p>storage system, or an error might have occurred in an LU.</p> <p>(O)</p> <p>Check whether the storage system is supported. If it is supported, check the connection statuses of the FC cables, and check the FC switch settings and the storage system settings. If the statuses and settings are correct, check the status of the LUs. If the problem cannot be resolved, acquire all the management log files, and then inform maintenance personnel. For a list of the management log files, see online Help.</p>
KAQM32050-E	The specified host port includes one or more FC paths that cannot be switched offline.	<p>An unsupported storage system might be connected, there might be a failure in the hardware connecting a node and storage system, or an error might have occurred in an LU.</p> <p>(O)</p> <p>Check whether the storage system is supported. If it is supported, check the connection statuses of the FC cables, and check the FC switch settings and the storage system settings. If the statuses and settings are correct, check the status of the LUs. If the problem cannot be resolved, acquire all the management log files, and then inform maintenance personnel. For a list of the management log files, see online Help.</p>
KAQM32051-W	FC path information could only be acquired for the node on which the operation was performed, because communication between the nodes is down.	<p>The other node in the cluster might be down, or a network error might have occurred.</p> <p>(O)</p> <p>Check whether the other node in the cluster is down, or if a network error occurred, resolve any problems, and then retry the operation. If the problem cannot be identified, acquire all the log data, and then contact maintenance personnel.</p>
KAQM32052-W	LU path information could only be acquired for the node on which the operation was performed, because communication between the nodes is down.	<p>The other node in the cluster might be down, or a network error might have occurred.</p> <p>(O)</p> <p>Check whether the other node in the cluster is down, or if a network error occurred, resolve any problems, and then retry the operation. If the problem cannot be identified, acquire</p>

Message ID	Message	Description and Action
		all the log data, and then contact maintenance personnel.
KAQM32053-E	No HBA cards are inserted for which the specified parameter can be set.	The specified parameter can be set only when a compatible HBA card is inserted. (O) Make sure that an HBA card for which the specified parameter can be set is inserted.
KAQM32054-E	The FC path status could not be acquired.	In the settings on the storage system, the volume that was allocated as a cluster management LU or file system might be allocated to an invalid LUN, or the volume allocated to the LUN might have been changed. (O) Check whether any changes were applied to the settings described in this message as possible causes. Check and, if necessary, revise the LU settings. Then execute the command <code>fpstatus</code> on both nodes, and restart the OS of the node where this message was output. After the OS restarts, check the FC path status. If this message is output again, collect all log data, and then contact maintenance personnel.

KAQM33 messages

This section explains messages that have a message ID beginning with KAQM33, and the actions to be taken if such messages appear.

Table 5-23 KAQM33 messages

Message ID	Message	Description and Action
KAQM33001-E	The user LU assignment function is not set to the maintenance mode.	The user LU assignment function is not set to the maintenance mode. (O) Execute the <code>lumapctl</code> command to change to the maintenance mode.
KAQM33008-E	A system error has occurred.	There might be a problem in the processing of the system. (error code= <i>occurred-error-code</i>) (O)

Message ID	Message	Description and Action
		Acquire all the management log files, and then contact maintenance personnel. For a list of the management log files, see Help.
KAQM33009-Q	Do you want to delete the specified user LU assignment information? (y/n)	This confirmation message appears when the user LU assignment information is deleted. (O) Enter y or n.
KAQM33016-E	The specified function (<i>specified-function-name</i>) cannot be executed.	The specified function is not supported. (O) Make sure the specified function name is correct, and then retry the operation.
KAQM33024-E	The user LUN (<i>user-LUN</i>) specified in the argument is duplicated.	The user LUN specified in the argument is duplicated. (O) Make sure the specified values are correct, and then retry the operation.
KAQM33026-E	The specified model name (<i>specified-model-name</i>) is invalid.	The specified model name is invalid. (O) Specify a valid model name, and then retry the operation.
KAQM33027-E	The specified serial number (<i>serial-number-of-the-storage-system-that-contains-the-volume</i>) is outside the valid range.	The specified serial number is outside the valid range. (O) Specify a serial number that is within the valid range, and then retry the operation.
KAQM33028-E	The specified volume (<i>volume</i>) is invalid.	The specified volume is invalid. (O) Specify a valid volume, and then retry the operation.
KAQM33029-E	The specified volume (<i>volume</i>) is duplicated.	The specified volume is duplicated. (O) Correct this problem so that the specified volume is not duplicated, and then retry the operation.
KAQM33030-E	The specified volume (<i>volume</i>) does not exist in the specified storage system (model name= <i>model-name</i> , serial number= <i>serial-number</i>).	The specified volume does not exist in the specified storage system. (O) Specify the correct volume, and then retry the operation.

Message ID	Message	Description and Action
KAQM33031-E	The specified volume (<i>volume</i>) in the specified storage system (model name= <i>model-name</i> , serial number= <i>serial-number</i>) is assigned to a different user LUN.	The specified volume in the specified storage system is assigned to a different user LUN. (O) Specify the correct volume, and then retry the operation.
KAQM33032-E	The user LU cannot be assigned because the configuration of the specified volume (<i>volume</i>) in the specified storage system (model name= <i>model-name</i> , serial number= <i>serial-number</i>) has changed.	The configuration of the specified volume in the specified storage system has changed. (O) Make sure that the configuration of the volume is correct, and then retry the operation.
KAQM33033-E	The assignment cannot be deleted because the specified user LUN is being used. (user LUN= <i>user-LUN</i> , model name= <i>model-name</i> , serial number= <i>serial-number</i> , volume= <i>volume</i>)	The assignment cannot be deleted because the specified user LUN is being used. (O) Specify the correct user LUN, and then retry the operation.
KAQM33034-E	The specified user LUN (<i>user-LUN</i>) is assigned to a different volume.	The specified user LUN is assigned to a different target and volume. (O) Specify the correct user LUN, and then retry the operation.
KAQM33035-E	The number of specified volumes exceeds the maximum value.	The number of specified volumes exceeds the maximum value. (O) Specify a number of volumes that does not exceed the maximum value, and then retry the operation.
KAQM33036-W	An attempt to set or release the copy control attribute has failed. (ID = <i>group-ID</i> , LUN = <i>LU-number</i> , details)	An attempt to set or cancel the copy control attribute failed when an LU was recognized or canceled. (O) Contact maintenance personnel.
KAQM33044-E	An attempt to access the other node in the cluster failed.	The other node in the cluster might have stopped, or a network error might have occurred. (O) Make sure that the other node in the cluster has not stopped, check for network errors, resolve any errors, and then retry the operation. If the error persists, acquire all the log data, and then contact maintenance personnel.

Message ID	Message	Description and Action
KAQM33046-E	Initialization of the user disk failed.	An error was detected while accessing a user disk. There might be a problem in the user disk or in the connection to the user disk. (O) Confirm the status of the FC path, and then confirm that there are no problems with the connection to the storage system. If there are no such problems, restart the node. If this error occurs repeatedly, acquire all the Management log files, and then contact maintenance personnel. See online Help file for a list of the Management log files.
KAQM33048-E	Creation of a user LU failed because the drive required to create the LU is not connected.	The drive required to create the LU is not connected. (O) Connect the required drive, and then perform a new installation again.
KAQM33049-E	The operation cannot be performed because the OS LU and the user LU are in the same RAID group.	The operation cannot be performed because the OS LU and the user LU are in the same RAID group. (O) None.
KAQM33050-Q	Are you sure you want to delete the specified user LU? (y/n)	This confirmation message appears before a user LU is deleted. (O) Enter y or n.
KAQM33051-E	The specified user LU cannot be deleted because it is currently in use.	The specified user LU cannot be deleted because it is currently in use. (O) Verify the specified value, and then retry the operation.
KAQM33052-E	The specified user LU cannot be deleted because it is not an internal disk.	The specified user LU cannot be deleted because it is not an internal disk. (O) Verify the specified value, and then retry the operation.
KAQM33053-E	The I/O scheduler setting could not be configured because the specified device file is an internal disk.	The I/O scheduler setting could not be configured because the specified device file is an internal disk. (O) Verify the specified value, and then retry the operation.

Message ID	Message	Description and Action
KAQM33054-E	Configuration of the I/O scheduler setting failed.	<p>A storage system disk might have failed, or there might be a problem with the connection to the storage system.</p> <p>(O)</p> <p>Confirm the status of the FC path, and then confirm that there are no problems with the connection to the storage system. If there are no such problems, and then retry the operation. If the error occurs again, acquire all of the log data, and then contact maintenance personnel. Maintenance personnel will acquire the OS logs by using the <code>oslogget</code> command, and then contact the Support Center.</p>
KAQM33055-E	The specified user LU does not exist in the system or a FC path error occurred. (user LU name = <i>specified-user-LU-name</i>)	<p>The specified user LU does not exist in the system or a FC path error occurred.</p> <p>(O)</p> <p>Check that the specified user LU is correct, and then retry the operation. If the specified user LU is correct, check the FC path status and make sure that there is no problem with the connection to the storage system. If there is no problem with the connection to the storage system, retry the operation.</p>

KAQM35 messages

This section explains messages that have a message ID beginning with KAQM35, and the actions to be taken if such messages appear.

Table 5-24 KAQM35 messages

Message ID	Message	Description and Action
KAQM35001-E	<p>The "<i>resource-type</i>" type resource "<i>resource-name</i>" is blocked.</p> <p>Note:</p> <p>If a resource name cannot be identified, a hyphen (-) is displayed for <i>resource-name</i>.</p>	<p>An attempt to start a system resource failed.</p> <p>(O)</p> <p>The system administrator must remedy the error that occurred in the resource.</p> <p>If you are using local data encryption, make sure none of the following errors occurred during OS startup: KAQM05256-E, or errors in the range from KAQM05258-E through</p>

Message ID	Message	Description and Action
		<p>KAQM05264-E. If any of these errors occurred, take action according to the error message. If the error occurred on a virtual server, check the system messages on the active node, and take action accordingly.</p> <p>If the type of the resource for which the error occurred is LVM_volume or Filesystem, check the status of the file system and the differential-data storage device where the error occurred, and then restart the node. If you cannot resolve the error by performing the above procedure, acquire all the log data, and then contact the Support Center. If the error occurred on a virtual server, acquire all the log data on the active node and the virtual server.</p>
KAQM35002-E	<p>The "IP_address" type resource "<i>resource-name</i>" cannot be used.</p> <p>Note: If a resource name cannot be identified, a hyphen (-) is displayed for <i>resource-name</i>.</p>	<p>An attempt to start an NFS service failed.</p> <p>(O)</p> <p>A hardware error might have occurred on the data LAN. Contact maintenance personnel to remedy the error, and then restart the node. If this error occurs again, acquire all the log data, and then contact the Support Center. If the error occurred on a virtual server, acquire all the log data on the active node and the virtual server.</p>
KAQM35003-E	<p>An error occurred during startup of a node resource.</p>	<p>An attempt to start a system resource failed.</p> <p>(O)</p> <p>Determine the cause of the error by referring to the KAQM04186-E message or any KAQM35<i>nnn</i> messages that are output as system messages, and then resolve the problem by following the applicable messages.</p>
KAQM35004-E	<p>An attempt to unmount the "Filesystem" type resource "<i>mount-point-path</i>" has failed.</p> <p>Note: If this error is reported to the SNMP manager, a hyphen (-) is displayed for the <i>mount-point-path</i>. See the system message to check the mount point path.</p>	<p>An attempt to unmount a file system has failed.</p> <p>(O)</p> <p>If you use the function of file snapshots or Backup Restore volume replication function, stop the relevant functions, and then retry the operation. Message ID	Message	Description and Action
KAQM35005-E	An unrecoverable error occurred in the resource information table.	Automatic restoration processing failed because the resource information table contained an error. (O) Acquire all the log data, and then contact the Support Center. If the error occurred on a virtual server, acquire all the log data on the active node and the virtual server.
KAQM35006-E	An attempt to stop the " <i>resource-type</i> " type resource " <i>resource-name</i> " has failed. Note: If a resource name cannot be identified, a hyphen (-) is displayed for <i>resource-name</i> .	An attempt to stop a resource failed. (O) Acquire all the log data, and then contact the Support Center. If the error occurred on a virtual server, acquire all the log data on the active node and the virtual server.
KAQM35007-E	An attempt to start the node has failed.	An error occurred during processing to start a resource. (O) Remedy the error by following the message output before this message, and then retry the operation. If no messages were output before this message or you cannot remedy the error, acquire all the log data, and then contact the Support Center. If the error occurred on a virtual server, acquire all the log data on the active node and the virtual server.
KAQM35008-E	An attempt to stop the node has failed.	An error occurred during processing to stop a resource. (O) Remedy the error by following the message output before this message, and then retry the operation. If no messages were output before this message or you cannot remedy the error, acquire all the log data, and then contact the Support Center. If the error occurred on a virtual server, acquire all the log data on the active node and the virtual server.
KAQM35009-E	A timeout occurred while the " <i>resource-type</i> " type resource " <i>resource-name</i> " was being started. Note: If a resource name cannot be identified, a hyphen (-) is displayed for <i>resource-name</i> .	A timeout occurred while a system resource was being started. (O) Restart the node, and then retry the operation. If this message is output again, acquire all the log data, and then contact the Support Center. If the error occurred on a virtual server,

Message ID	Message	Description and Action
		acquire all the log data on the active node and the virtual server.
KAQM35010-E	A timeout occurred while the " <i>resource-type</i> " type resource " <i>resource-name</i> " was being stopped. Note: If a resource name cannot be identified, a hyphen (-) is displayed for <i>resource-name</i> .	A timeout occurred while a system resource was being stopped. (O) Wait a while, and then retry the operation. If this message is output again, acquire all the log data, and then contact the Support Center. If the error occurred on a virtual server, acquire all the log data on the active node and the virtual server.
KAQM35011-W	An attempt to update internal system information has failed. The status of the node might not change correctly.	A system error occurred. (O) Restart the node, and then retry the operation. If this message is output again, acquire all the log data, and then contact the Support Center. If the error occurred on a virtual server, acquire all the log data on the active node and the virtual server.
KAQM35012-W	The NFS share cannot be accessed from the NFS client because name resolution of the public destination host " <i>NFS-public-destination-hostname</i> " for the NFS share failed during node startup.	One or more NFS public destination hosts for which name resolution failed were detected during node startup. (O) Make sure that name resolution is possible for the public destination hosts displayed in the message, and then use the <code>nfslist</code> command to make sure that the public destination hosts are displayed correctly. Next, inform the NFS clients that the system has recovered from the failure.
KAQM35013-W	Output of the message KAQM35012-W or KAQM35020-W was suppressed, because name resolution failed for more than 16 public destination hosts for the NFS share.	Name resolution failed for more than 16 NFS public destination hosts. (O) Use the <code>nfslist</code> command to check the public destination hosts for which name resolution failed. After name resolution is possible for all public destination hosts, use the <code>nfslist</code> command to make sure that the public destination hosts are displayed correctly. Next, inform the NFS clients that the system has recovered from the failure.
KAQM35015-I	Now starting a resource... (<i>resource-type</i>)	(O) No action is required.
KAQM35016-I	Now stopping a resource... (<i>resource-type</i>)	(O)

Message ID	Message	Description and Action
		No action is required.
KAQM35017-E	A timeout occurred while a resource was being stopped.	A timeout occurred while a system resource was being stopped. (O) Collect dump information, and then contact the Support Center.
KAQM35018-E	The "" <i>resource-type</i> "" type resource "" <i>resource-name</i> "" is blocked.	An attempt to start a system resource failed. (O) The system administrator must remedy the error that occurred in the resource. If you are using local data encryption, make sure none of the following errors occurred during OS startup: KAQM05256-E, or errors in the range from KAQM05258-E through KAQM05264-E. If any of these errors occurred, take action according to the error message. If the type of the resource for which the error occurred is LVM_volume or Filesystem, check the statuses of the file system where the error occurred and of the corresponding differential-data storage device, and then take the appropriate action for those statuses. After taking action, if the resource group status does not become Online, forcibly terminate the resource group, and then restart it. If you cannot resolve the error by performing the above procedure, acquire all the log data, and then contact the Support Center.
KAQM35019-E	A timeout occurred during the processing to start the " <i>resource-type</i> "-type resource group " <i>resource-group-name</i> ".	A timeout occurred during the processing to start the resource group. (O) Forcibly terminate the resource group, and then restart it. If this message appears again, collect all log data, and then contact maintenance personnel.
KAQM35020-W	The NFS share cannot be accessed from the NFS client, because name resolution of the public destination host for the NFS share failed during resource group startup. (<i>NFS-public-destination-hostname</i>)	During resource group startup, a public destination host for the NFS share for which name resolution could not be performed was detected. (O) Make sure that name resolution is possible for the public destination hosts displayed in the message, and then use the <code>nfslist</code> command to

Message ID	Message	Description and Action
		make sure that the public destination hosts are displayed correctly. Next, inform the NFS clients that the system has recovered from the failure.
KAQM35021-W	One or more resources cannot be started because the Hitachi NAS NFS protocol license has not been set up.	A license that is required to start resources has not been set up. (O) Set up the license, and then restart the resource groups. If the problem is not resolved, collect all log data, and then contact maintenance personnel.
KAQM35022-E	An attempt to start the " <i>resource-type</i> "-type resource group " <i>resource-group-name</i> " failed.	An attempt to start a resource failed. (O) Collect all log data, and then contact maintenance personnel.
KAQM35023-E	An attempt to stop the " <i>resource-type</i> "-type resource group " <i>resource-group-name</i> " failed.	An attempt to stop a resource failed. (O) Collect all log data, and then contact maintenance personnel.
KAQM35024-E	A timeout occurred during the processing to stop the " <i>resource-type</i> "-type resource group " <i>resource-group-name</i> ".	A timeout occurred during the processing to stop the resource group. (O) Wait a while, and then retry the operation. If this message appears again, collect all log data, and then contact maintenance personnel.
KAQM35025-E	An attempt to start the " <i>resource-type</i> "-type resource group " <i>resource-group-name</i> " failed.	An attempt to start a resource failed. (O) Determine the cause of the error by referring to the KAQM04186-E message or any KAQM35 <i>nnn</i> messages that are output as system messages, and then resolve the problem by following the applicable messages.
KAQM35026-E	An error occurred during startup of a node resource.	An error occurred during processing to start a resource. (O) Remedy the error by following the message output before this message, and then retry the operation. If no messages were output before this message or you cannot remedy the error, acquire all the log data, and then contact the Support Center. If the error occurred on a virtual server, acquire all the log data on the active node and the virtual server.

KAQM37 messages

This section explains messages that have a message ID beginning with KAQM37, and the actions to be taken if such messages appear.

Table 5-25 KAQM37 messages

Message ID	Message	Description and Action
KAQM37001-E	The specified file does not exist. (file path = <i>file-path</i>)	The file specified in the path does not exist. (O) Specify the path of an existing file.
KAQM37002-E	The format of the specified file is invalid. (file path = <i>file-path</i>)	There might be insufficient disk space, or the name of a file or path of a directory that is a target of the task might contain a newline character. (O) If there is insufficient disk space, expand the target file system. Make sure that there is no newline character in the name of a file or path of a directory that is a target of the task. If there is sufficient disk space and no such newline character, no action is necessary. If the same error occurs the next time the task is executed, collect all the log data and then contact maintenance personnel.
KAQM37003-E	The format of the specified host name is invalid. (host name = <i>host-name</i>)	The specified host name contains invalid characters, or the length is outside the valid range. (O) Following the help information, specify a valid value.
KAQM37004-E	An attempt to perform name resolution on the FQDN failed. (FQDN = <i>FQDN</i>)	The specified FQDN is not configured for name resolution. (O) Configure the FQDN to be able to perform name resolution, and then retry the operation.
KAQM37005-E	The specified file system has not been mounted. (file system = <i>file-system-name</i>)	The specified file system has not been mounted. (O) Either mount the specified file system, or specify the name of a mounted file system, and then retry the operation.
KAQM37006-E	The specified ID is invalid. (ID = <i>ID</i>)	The specified ID is not numeric, or is outside the valid range. (O)

Message ID	Message	Description and Action
		Following the help information, specify a valid value.
KAQM37007-E	The process with the specified ID does not exist. (ID = <i>ID</i>)	The process with the specified ID is not running. (O) Specify a valid ID.
KAQM37008-E	The process with the specified ID is already running. (ID = <i>ID</i>)	The archive job is already running. (O) Specify a valid ID.
KAQM37009-E	The process with the specified ID is not ready to accept the request. (ID = <i>ID</i> , status = <i>status-of-job</i>)	The process with the specified ID is not ready to accept the request. (O) Following the help information, specify a valid option.
KAQM37010-E	The specified file system has been mounted as read-only. (file system = <i>file-system-name</i>)	The specified file system has been mounted as read-only. (O) Mount the file system as read-write, or specify a valid file system name, and then retry the operation.
KAQM37011-E	The argument string of the specified option is invalid. (option = <i>option-name</i> , argument = <i>argument-string</i>)	The specified argument contains invalid characters, or the length is outside the valid range. (O) Following the help information, specify a valid value.
KAQM37012-E	The argument value of the specified option is invalid. (option = <i>option-name</i> , argument = <i>argument</i>)	The specified value is not numeric, or is outside the valid range. (O) Following the help information, specify a valid value.
KAQM37013-E	The minimum and maximum values of a specified thread are invalid.	The specified minimum value is higher than the maximum value. (O) Following the help information, specify a valid value.
KAQM37014-E	Acquisition of a lock failed during execution of a command.	Acquisition of a lock failed during execution of a command. (O) Wait a while, and then retry the operation. If the error persists, acquire all the log data, and then contact maintenance personnel.

Message ID	Message	Description and Action
KAQM37015-E	An attempt to access the other node in the cluster failed.	The other node in the cluster might have stopped, or a network error might have occurred. (O) Make sure that the other node in the cluster has not stopped, check for network errors, resolve any errors, and then retry the operation. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM37020-E	Memory is insufficient.	An attempt to allocate memory has failed. (O) Wait a while, and then retry the operation. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM37021-E	An internal error has occurred.	An internal error occurred during processing. (O) Acquire all the log data, and then contact maintenance personnel.
KAQM37022-E	Acquisition of a lock among threads failed.	An error occurred during acquisition of a lock among threads. (O) Acquire all the log data, and then contact maintenance personnel.
KAQM37023-E	Creation of a thread failed.	Creation of a thread failed because of insufficient system resources. (O) Wait a while, and then retry the operation. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM37024-E	The number of files that can be processed has exceeded the upper limit.	An attempt was made to archive a number of files that exceeds the upper limit for one request. (O) Divide the file list so that the number of files does not exceed the upper limit.
KAQM37025-E	An error occurred during internal communication.	An error occurred during internal communication between processes. (O) Acquire all the log data, and then contact maintenance personnel.

Message ID	Message	Description and Action
KAQM37026-E	Analysis of a configuration file failed.	An error occurred during analysis of a configuration file. (O) Acquire all the log data, and then contact maintenance personnel.
KAQM37027-E	The file path is too long.	The specified file path is more than 4,095 characters. (O) Specify a path that is no more than 4,095 characters, and then retry the operation.
KAQM37028-E	The specified file is not a target for archiving.	The specified file is not a target for archiving. (O) Specify a file that is a target for archiving, and then retry the operation.
KAQM37029-E	The specified file has already been migrated.	The specified file has already been migrated. (O) Specify a file that has not been migrated, and then retry the operation.
KAQM37031-E	The file does not exist.	The file does not exist. The file might have been deleted or moved during archiving, or the file path might contain a line feed code. (O) Make sure that the file path is correct, and then retry the operation. If this message is output because a file was deleted or moved during archiving, unreferenced files might remain on the HCP system. See the HSM Core log (<code>hsmarc.log</code>) and if the KAQM37070-E message is output, use that message to identify the HCP file path. For details on how to handle HCP files, see the HCP manuals. No action is necessary for tiered file systems.
KAQM37032-E	The specified file is currently migrating.	The specified file is currently migrating. (O) Do not specify a migrating file for migration.
KAQM37033-E	An attempt to update a system file failed. (reason = {insufficient memory an I/O	An attempt to update a system file has failed. (reason = {insufficient memory an I/O error no disk space a lock failure some other error})

Message ID	Message	Description and Action
	error no disk space a lock failure some other error})	(O) If the reason is insufficient memory or a lock failure, wait a while, and then retry the operation. If the reason is insufficient disk space, expand the file system, and then try again. In other cases, acquire all the log data, and then contact maintenance personnel.
KAQM37034-E	Creation of a stub failed.	Creation of a stub failed due to an internal error. An error might have occurred in the file system. (O) In the list of file systems, check the status of the file system. If the file system has an error status, follow the error recovery procedure provided in online Help. In other cases, acquire all the log data, and then contact maintenance personnel.
KAQM37035-E	Preparation for communication with HCP failed.	Preparation for communication with HCP failed. (O) Acquire all the log data, and then contact maintenance personnel.
KAQM37036-E	An attempt to open a file failed.	An error occurred during an attempt to open a file. (O) Acquire all the log data, and then contact maintenance personnel.
KAQM37037-E	Communication with the HCP system failed. (HTTP return code = <i>HTTP-return-code</i> , details = <i>error-details</i>)	An error occurred during communication with HCP. (O) Check the set namespace and the network status, and then retry the operation. If the problem persists, look up the HTTP request return code in the HCP manual and take action accordingly, or follow the instructions in the detailed error message and contact the HCP administrator. If the problem cannot be resolved, acquire all the log data, and then contact maintenance personnel. Supplementary note: If a remote HCP system cannot be accessed in an environment where a system is connected to the HCP system over a network, determine the cause of the problem, and then resolve the problem. Before taking action

Message ID	Message	Description and Action
		<p>according to the message, see the <i>Troubleshooting Guide</i>.</p> <p>The cause of the error and the action to take for each HTTP request return code is as follows:</p> <ul style="list-style-type: none"> • 400: The user account for accessing tenants or namespaces might not have the necessary permissions for this operation. Ask the HCP administrator to revise the permissions. • 403: The cause of the error and the action to take might be one of the following: <ul style="list-style-type: none"> - The user account information for accessing tenants or namespaces might be incorrect. Confirm the user name and password with the HCP administrator, and specify the correct information. - The user account for accessing tenants or namespaces might not have the necessary permissions for this operation. Ask the HCP administrator to revise the permissions. - The namespace might not exist. Check with the HCP administrator whether the namespace exists. - The settings might not allow custom metadata to be added to or deleted from namespace objects, or the settings might not allow you to overwrite metadata. Ask the HCP administrator to revise the namespace settings. - <code>Retention Class</code> might be set for the namespace. Use the HDI WORM functionality to set the retention period when the HCP and HDI systems are linked together. - The communication protocol (HTTP/HTTPS) settings for the HDI and HCP systems might not match. Revise the communication protocol settings by using the <code>arcsslctl</code> command. Ask the HCP administrator to revise the communication protocol settings. • 409: The cause of the error and the action to take might be one of the following:

Message ID	Message	Description and Action
		<ul style="list-style-type: none"> - A conflict might have occurred with other HCP processing. Wait a while, and then try again. - Version management might not be enabled in the namespace settings. Ask the HCP administrator to enable version management. • 413: The namespace might be out of space. Ask the HCP administrator to expand the capacity of the namespace. • 500: An internal error might have occurred in HCP. Wait a while, and then try again. • 503: HCP might be temporarily unable to perform processing. Wait a while, and then try again. • none: An HCP access failure might have occurred. Follow the instructions in the <i>Troubleshooting Guide</i> to resolve the HCP access failure.
KAQM37038-E	Migration failed because a file of the same name exists on the HCP system. (file path = <i>HCP-file-path</i>)	<p>A file of the same name exists on the HCP system.</p> <p>(O)</p> <p>Confirm that the namespace versioning setting is enabled. If it is disabled, enable it, and then perform the migration again. Even if the setting is enabled, perform the migration again.</p>
KAQM37040-E	An error occurred during hash calculation of a file.	<p>An error occurred during hash calculation of a file.</p> <p>(O)</p> <p>Acquire all the log data, and then contact maintenance personnel.</p>
KAQM37041-E	A hash value does not match the value of the archived file.	<p>The file was not archived properly on HCP.</p> <p>(O)</p> <p>Retry the archive operation.</p>
KAQM37042-E	An attempt to resolve the host name of an HCP system failed.	<p>Name resolution could not be properly performed. Communication with an HCP system might be temporarily disabled, due to a problem such as a network error or a high load on the HCP system.</p> <p>(O)</p> <p>Wait a while, and then retry the operation. If the error occurs again, make sure a network environment</p>

Message ID	Message	Description and Action
		<p>exists in which name resolution can be performed.</p> <p>Details:</p> <p>If a remote HCP system cannot be accessed in an environment where a system is connected to the HCP system over a network, determine the cause of the problem, and then resolve the problem. Before taking action according to the message, see the <i>Troubleshooting Guide</i>.</p>
KAQM37043-E	An attempt to connect to HCP failed.	<p>Specified HCP information might be incorrect, or there might be a problem with the HCP system or the network.</p> <p>(O)</p> <p>Revise the HCP settings. If the settings are correct, check the status of the HCP system and the network, fix the cause of the error, and then retry the operation. If the error persists, acquire all the log data, and then contact maintenance personnel.</p> <p>Details:</p> <p>If a remote HCP system cannot be accessed in an environment where a system is connected to the HCP system over a network, determine the cause of the problem, and then resolve the problem. Before taking action according to the message, see the <i>Troubleshooting Guide</i>.</p>
KAQM37044-E	A timeout occurred during communication with HCP.	<p>There might be a problem with the HCP system or the network.</p> <p>(O)</p> <p>Check the status of the HCP system and the network, fix the cause of the error, and then retry the operation. If the error persists, acquire all the log data, and then contact maintenance personnel.</p> <p>Details:</p> <p>If a remote HCP system cannot be accessed in an environment where a system is connected to the HCP system over a network, determine the cause of the problem, and then resolve the problem. Before taking action according to the message, see the <i>Troubleshooting Guide</i>.</p>
KAQM37045-E	An attempt to establish SSL communication with HCP failed.	<p>An attempt to establish SSL communication with HCP failed.</p> <p>(O)</p>

Message ID	Message	Description and Action
		<p>Check the settings of SSL on HCP and the status of the network, fix the cause of the error, and then retry the operation. If the error persists, acquire all the log data, and then contact maintenance personnel.</p> <p>Details:</p> <p>If a remote HCP system cannot be accessed in an environment where a system is connected to the HCP system over a network, determine the cause of the problem, and then resolve the problem. Before taking action according to the message, see the <i>Troubleshooting Guide</i>.</p>
KAQM37048-E	Communication with HCP was interrupted.	<p>Communication with HCP was interrupted because a resource group was stopped or moved, a file system was unmounted, or a user stopped the archive operation.</p> <p>(O)</p> <p>If a resource group was stopped or moved, or if a file system was unmounted, mount the file system, and then try again.</p>
KAQM37049-E	Communication with HCP failed.	<p>The number of times to retry communication with HCP has reached the upper limit.</p> <p>(O)</p> <p>Check the network status, and then try again. If the error persists, acquire all the log data, and then contact maintenance personnel.</p> <p>Details:</p> <p>If a remote HCP system cannot be accessed in an environment where a system is connected to the HCP system over a network, determine the cause of the problem, and then resolve the problem. Before taking action according to the message, see the <i>Troubleshooting Guide</i>.</p>
KAQM37050-E	Acquisition of file information failed.	<p>An error occurred during acquisition of file information. An error might have occurred in the file system.</p> <p>(O)</p> <p>In the list of file systems, check the status of the file system. If the file system has an error status, follow the error recovery procedure provided in online Help. In other cases, acquire all</p>

Message ID	Message	Description and Action
		the log data, and then contact maintenance personnel.
KAQM37051-E	Creation of a metadata file failed.	An error occurred during the creation of a metadata file. (O) Acquire all the log data, and then contact maintenance personnel.
KAQM37052-E	An attempt to output a result file failed.	An error occurred during output of a result file. An error might have occurred in the file system. (O) In the list of file systems, check the status of the file system. If the file system has an error status, follow the error recovery procedure provided in online Help. In other cases, acquire all the log data, and then contact maintenance personnel.
KAQM37053-E	Extension of the retention period failed because the target file does not exist.	The target file has already been deleted. (O) None
KAQM37054-E	Extension of the retention period failed because the specified term is shorter than that of the specified file.	The specified retention period is shorter than that of the file. (O) Specify a retention period that is longer than that of the file, and then try again.
KAQM37055-E	An error occurred during extension of the retention period.	An error occurred during extension of the retention period. (O) Acquire all the log data, and then contact maintenance personnel.
KAQM37056-E	Deletion of a file failed because the file's retention period has not ended.	The retention period has not ended. (O) Delete the file after the retention period ends.
KAQM37057-E	Deletion of a file failed.	An error occurred during deletion of a file. (O) Acquire all the log data, and then contact maintenance personnel.
KAQM37059-E	The file could not be archived because it was updated during the archiving process.	The file was updated during the archiving process. Even if the Active File Migration function is enabled, this message might appear when stub files are updated.

Message ID	Message	Description and Action
		(O) No action is required, because data will be transferred to the HCP system during the next migration.
KAQM37060-E	An attempt to set information for a file failed. (reason = {insufficient memory an I/O error no disk space some other error})	An error occurred while setting information for a file. (O) If the reason is insufficient memory, wait for a while, and then retry the operation. If the reason is insufficient disk space, expand the file system, and then try again. Otherwise, acquire all the log data, and then contact maintenance personnel.
KAQM37061-E	Extension of the retention period for an HCP file failed. (reason = <i>reason</i> , HCP file path = <i>HCP-file-path</i>)	An error occurred during extension of the retention period for a file on HCP. (O) Make sure the target file exists and the settings for the retention period are correct.
KAQM37062-E	An attempt to output a status file of the archive process failed.	An attempt to output a status file of the archive process failed. (O) Acquire all the log data, and then contact maintenance personnel.
KAQM37063-E	HCP information for data access has not been set.	HCP information for data access has not been set. (O) Set HCP information for data access, and then try again.
KAQM37065-E	The input value is invalid.	The input value is invalid. (O) Following the help information, specify a valid value.
KAQM37066-E	Authentication failed. (HTTP return code = <i>HTTP-return-code</i> details = <i>error-details</i>)	The user name, password, tenant, namespace, or SSL setting is invalid. (O) Check the set value, and then retry the operation. If the problem persists, look up the HTTP request return code in the HCP manual and take action accordingly, or follow the instructions in the HCP error message and contact the HCP administrator. Supplementary note: The cause of the error and the action to take for each HTTP request return code is as follows:

Message ID	Message	Description and Action
		<ul style="list-style-type: none"> • 400: The user account for accessing tenants or namespaces might not have the necessary permissions for this operation. Ask the HCP administrator to revise the permissions. • 403: The cause of the error and the action to take might be one of the following: <ul style="list-style-type: none"> - The user account information for accessing tenants or namespaces might be incorrect. Confirm the user name and password with the HCP administrator, and specify the correct information. - The user account for accessing tenants or namespaces might not have the necessary permissions for this operation. Ask the HCP administrator to revise the permissions. - The namespace might not exist. Check with the HCP administrator whether the namespace exists. - The settings might not allow custom metadata to be added to or deleted from namespace objects, or the settings might not allow you to overwrite metadata. Ask the HCP administrator to revise the namespace settings. - <code>Retention Class</code> might be set for the namespace. Use the HDI WORM functionality to set the retention period when the HCP and HDI systems are linked together. - The communication protocol (HTTP/HTTPS) settings for the HDI and HCP systems might not match. Revise the communication protocol settings by using the <code>arcsslctl</code> command. Ask the HCP administrator to revise the communication protocol settings. • 409: The cause of the error and the action to take might be one of the following: <ul style="list-style-type: none"> - A conflict might have occurred with other HCP processing. Wait a while, and then try again. - Version management might not be enabled in the namespace settings. Ask the HCP

Message ID	Message	Description and Action
		<p>administrator to enable version management.</p> <ul style="list-style-type: none"> • 413: The namespace might be out of space. Ask the HCP administrator to expand the capacity of the namespace. • 500: An internal error might have occurred in HCP. Wait a while, and then try again. • 503: HCP might be temporarily unable to perform processing. Wait a while, and then try again. • none: An HCP access failure might have occurred. Follow the instructions in the <i>Troubleshooting Guide</i> to resolve the HCP access failure.
KAQM37067-E	An attempt to rename a file failed because the file's retention period has not ended.	<p>The retention period has not ended. (O) Rename the file after the retention period ends.</p>
KAQM37068-E	Recall processing failed because the HCP file does not exist. (HCP file path = <i>HCP-file-path</i>)	<p>The file does not exist on HCP. A conflict with another operation might exist. 	<i>name</i> , policy name = <i>policy-name</i>)	None.
KAQM37099-I	A connection to HCP was established.	A connection to HCP can be established. (O) None.
KAQM37100-E	The HSM Core daemon was restarted because an unexpected end of the daemon was detected.	The HSM Core daemon ended abnormally. (O) Acquire all the log data, and then contact maintenance personnel.
KAQM37101-E	An attempt to connect to the HSM Core daemon failed.	An error occurred while connecting to the HSM Core daemon. (O) Check whether the OS was stopped or restarted when the message appeared. If the OS was stopped or restarted, no action needs to be taken. If the OS was not stopped or restarted, collect all log data, and then contact maintenance personnel.
KAQM37102-E	The specified file system is blocked.	The specified file system or the device file being used by the file system is blocked. In the List of File Systems, if 'Device status' is 'Error', the device file is blocked. If 'Mount status' is 'Fatal error' or 'Error', the file system is blocked. (O) Follow troubleshooting in the help to check the file system and device file error information in the List of File Systems, and then recover the error with maintenance personnel.
KAQM37103-E	The file system is being blocked because there is not enough space on the differential-data storage device, or there might be a problem with the differential-data storage device.	The operation cannot be performed because either the file system is being blocked because there is not enough space on the differential-data storage device, or there might be a problem with the differential-data storage device. (O) In [List of File Systems], check the status indicated for the file system, and then take action appropriate for the status.
KAQM37104-W	Setup of time information for a file failed, but processing continued.	The file time might have failed to be saved or an attribute might have been changed either when a migration was performed to an HCP system or when

Message ID	Message	Description and Action
		data was imported from another file server. (O) If migrations are set up, re-execute the migration.
KAQM37105-E	A namespace is not set for the specified file system.	A namespace is not set for the specified file system. (O) If migrations are set up, set a migration policy, and then retry the operation. In all other cases, acquire all the log data, and then contact maintenance personnel.
KAQM37106-E	Restoration of a file or directory attribute failed.	Possible causes are as follows: During a migration to the HCP system, an attribute failed to be saved or an attribute was changed, during an import from another file server, an attribute failed to be set, or an error occurred in the file system. (O) In the list of file systems, check the status of the file system. If the file system has an error status, follow the error recovery procedure provided in online Help. In other cases, acquire all the log data, and then contact maintenance personnel.
KAQM37107-W	The restoration failed, but processing continued.	Either the data or the attribute information was not in the HCP system. (O) No action is necessary.
KAQM37110-E	Background restoration is being performed.	Background restoration is being performed.
KAQM37111-E	Restoration cannot be performed because the file system has not been backed up.	Restoration was attempted for a file system which has not been archived. (O) Make sure that name of the file system to be restored is valid. If the file system name is valid, archive the file system, and then retry the restoration.
KAQM37112-E	The specified namespace cannot be set because it is set for another file system in the system.	The specified namespace is set for another file system in the system. (O) Make sure that the specified file system name is valid, use the Migration Wizard to confirm the

Message ID	Message	Description and Action
		namespace set for the file system, and then try again.
KAQM37113-I	Background restoration started. (file system = <i>file-system-name</i>)	Background restoration started.
KAQM37114-I	Background restoration completed. (file system = <i>file-system-name</i>)	Background restoration completed.
KAQM37115-E	An attempt to send a restoration request to the HSM Core daemon failed.	The maximum number of files that the HSM Core daemon can process has been reached. (O) Wait a while, and then retry the operation. If the error occurs again, acquire all the log data, and then contact maintenance personnel.
KAQM37116-E	The file path specified on HCP does not exist. (file path on HCP = <i>file-path-on-HCP</i>)	The file path specified on HCP does not exist. (O) Check the path on HCP that is output by the <code>hcoporphanrestore</code> command, and then retry the operation.
KAQM37117-E	Restoration of one or more files failed.	There is not enough free disk space to restore files, or a disk error might have occurred. (O) If there is insufficient disk space, expand the file system, and then try again. Otherwise, acquire all the log data, and then contact maintenance personnel.
KAQM37118-E	The file system might have been unmounted during command execution.	The file system might have been unmounted during command execution. (O) Mount the file system, and then retry the operation.
KAQM37119-E	Command execution failed.	There is not enough free disk space for command execution, or a disk error might have occurred. (O) If there is insufficient disk space, expand the file system, and then try again. Otherwise, acquire all the log data, and then contact maintenance personnel.

Message ID	Message	Description and Action
KAQM37120-E	An attempt to perform name resolution for an FQDN failed.	Name resolution could not be properly performed. Communication with the HCP system might be temporarily disabled due to a problem with the HCP system or the network, or due to a high load on the HCP system, or there might be a problem with the HCP data access information or with the namespace set for the file system. (O) Wait a while, and then retry the operation. If the error occurs again, make sure that name resolution is possible in the network environment, and then check the connection with the HCP system. If an error occurs while checking the connection with the HCP system, resolve the cause of the error according to the action of the output error message.
KAQM37121-E	The specified path on HCP is not for a file. (file path on HCP = <i>file-path-on-HCP</i>)	The specified path on HCP is not for a file. (O) Check the path on HCP that is output by the <code>hcporphanrestore</code> command, and then retry the operation.
KAQM37122-E	The specified restoration path contains a file or directory. (restoration path = <i>restoration-path</i>)	The specified restoration path contains a file or directory. (O) Specify a restoration path that does not contain a file or a directory, and then retry the operation.
KAQM37123-E	The specified value is different from the namespace set on the specified file system. (set namespace = <i>set-namespace</i>)	The specified value is different from the namespace set on the specified file system. (O) If the namespace set on the file system has changed, delete all migration tasks, and then set a policy again. If the namespace set on a file system is valid, retry the operation with no namespace.
KAQM37124-E	A restoration could not be performed because the ACL type of the file system at the restoration destination is different from the ACL type of the archived file system.	A restoration could not be performed because the ACL type of the file system at the restoration destination is different from the ACL type of the archived file system. (O) Delete the file system at the restoration destination, create a file system that has the same ACL type as

Message ID	Message	Description and Action
		the archived file system, and then retry the restoration.
KAQM37128-E	The specified execution interval is invalid.	The specified execution interval is invalid. (O) Check the specified value, and then retry the operation.
KAQM37129-E	No license is set to allow linkage with an HCP system.	No license is set to allow linkage with an HCP system. (O) Please set a license.
KAQM37130-W	Restoration of a mount-point attribute failed, but processing continued.	Attribute information for a mount point did not exist on HCP system. (O) If ACL was set to the mount point when you performed migration, set ACL again.
KAQM37131-E	The specified restoration path contains a directory that does not exist. (restoration path = <i>restoration-path</i>)	The specified restoration path contains a directory that does not exist. (O) Make sure the specified restoration path is correct, and then retry the operation.
KAQM37132-I	The setting for not allowing hard links to be created on the specified file system has been set. (file system = <i>file-system-name</i>)	The setting for not allowing hard links to be created on the specified file system has been set. (O) No action is necessary.
KAQM37133-E	Stub processing failed.	Stub processing was canceled due to several errors occurring. (O) Identify the cause of the problem by looking at the message that was output before this message, and then take appropriate action.
KAQM37134-E	Stub processing failed for a file. (file path = <i>file-path</i>)	Stub processing failed for a file. (O) See the message that was output before this message, and then take appropriate action.
KAQM37135-W	Stub processing was executed, even though the unused capacity threshold has not been exceeded. (file system = <i>file-system-name</i>)	No files are subject to stub processing. (O) Either expand the file system, or delete or move any unnecessary files.

Message ID	Message	Description and Action
KAQM37136-E	An attempt to update file system management information failed. (reason = {insufficient memory an I/O error no disk space a lock failure some other error})	An attempt to update file system management information failed. (O) In the list of file systems, check the status of the file system. If the file system has an error status, follow the error recovery procedure provided in online Help. If there is not enough memory, wait until the load on the system decreases, and then execute the <code>arccorrection</code> command. If there is not enough unused capacity, free up the necessary amount, and then execute the <code>arccorrection</code> command. If a lock failure occurred, wait a while, and then execute the <code>arccorrection</code> command. In other cases, acquire all the log files, and then contact maintenance personnel.
KAQM37137-I	Rebuilding of management information about the file system <i>file-system-name</i> will now start.	Rebuilding of management information about the file system will now start. (O) No action is necessary.
KAQM37138-I	Management information about the file system <i>file-system-name</i> is now being rebuilt... (<i>progress</i>)	Management information about the file system is now being rebuilt. (O) No action is necessary.
KAQM37139-I	Rebuilding of management information about the file system <i>file-system-name</i> finished.	Rebuilding of management information about the file system finished. (O) No action is necessary.
KAQM37140-E	An error occurred during rebuilding of management information about the file system <i>file-system-name</i> . KAQM37165-E	An attempt to access the domain controller failed.	An attempt to access the domain controller failed because CIFS service user mapping is not set on both nodes, or the CIFS service is not operating normally on each node. (O) Check the CIFS service user mapping settings on both nodes. If the settings are correct, confirm that the CIFS service is operating normally on both nodes, and then retry the operation.
KAQM37166-E	Import definition information could not be set because the import-target file system is of the Classic ACL type.	Import definition information could not be set because the import-target file system is of the Classic ACL type. (O)

Message ID	Message	Description and Action
		Specify an import-target file system of the Advanced ACL type, and then retry the operation.
KAQM37167-E	Import definition information could not be set because the import-target file system is a WORM file system.	Import definition information could not be set because the import-target file system is a WORM file system. (O) Specify an import-target file system that is not a WORM file system, and then retry the operation.
KAQM37168-E	Failed to connect to the import-source file server.	The host name or shared name of the import source might be invalid, or there might be a problem with the network or with the settings or status of the import-source file server. (O) Check the host name and shared name of the import source, the settings and status of the import-source file server, and the status of the network. Remove the cause of the problem, and then try again. If the problem persists, acquire all log data, and then contact maintenance personnel.
KAQM37170-E	No directory is specified for the import target.	No directory is specified for the import target. (O) Check the path of the directory specified for the import target, and then retry the operation.
KAQM37171-E	Import definition information cannot be deleted because an all-data import is being performed in accordance to import definition information.	Import definition information cannot be deleted because an all-data import is being performed in accordance to import definition information. (O) Wait until the corresponding import is complete, specify the <code>-f</code> option, and then retry the operation.
KAQM37172-W	Only some of the ACEs were imported because the number of ACEs set at the import source exceeds the limit.	700 ACEs were imported because the number of ACEs set at the import source exceeds the limit. (O) Check the ACEs on the import source, and set 700 or less ACEs.
KAQM37173-I	The all-data import is complete.	The all-data import is complete. (O) No action is required.

Message ID	Message	Description and Action
KAQM37174-Q	An all-data import is being performed according to data import definition information. Do you want to stop the all-data import? (y/n)	This confirmation message is output during an all-data import. (O) Enter y or n.
KAQM37175-E	An all-data import is not being executed.	An all-data import is not being executed. (O) Check the list of import definition information, and then retry the operation.
KAQM37176-I	The import status cannot be viewed because an all-data import is not being executed.	The import status cannot be viewed because an all-data import is not being executed. (O) Start an all-data import, and then retry the operation.
KAQM37177-E	Acquisition of the import status failed.	Acquisition of the import status failed because the import-target file system cannot be accessed. (O) Confirm that you can access the import-target file system, and then retry the operation.
KAQM37178-W	Only some of the ACEs were imported because the number of ACEs set at the import source exceeds the limit. (file path = <i>file-path</i>)	700 ACEs were imported because the number of ACEs set at the import source exceeds the limit. (O) Check the ACEs on the import source, and set 700 or less ACEs.
KAQM37179-I	A connection was established to the import-source file server.	The import-source file server can be connected to. (O) No action is required.
KAQM37180-E	An import from another file server failed. (reason = {insufficient memory an I/O error no disk space some other error}, file path = <i>file-path</i>)	An import from another file server failed due to the indicated reason. (O) In the list of file systems, check the status of the file system. If the file system has an error status, follow the error recovery procedure provided in online Help. If there is insufficient memory, wait a while, and then retry the operation. If there is insufficient disk space, expand the file system, and then retry the operation. In other cases, acquire all the log data, and then contact maintenance personnel.

Message ID	Message	Description and Action
KAQM37181-E	The import of data from another file server failed because the user or group set for the import-source file or directory cannot be recognized. (reason = {a domain controller access failure the user or group was not found CIFS service user mapping is not set insufficient memory some other error}, import-source file or directory path = <i>import-source-file-or-directory-path</i>)	The import of data from another file server failed because the user or group set for the import-source file or directory cannot be recognized due to the indicated reason. (O) If access to the domain controller failed, then check for network problems. If the user or group was not found, make sure that the user or group set for the import-source file or directory is registered in the domain controller or an account mapping file. If the problem cannot be resolved, revise the CIFS service operation status, authentication mode, and user mapping settings. If there is insufficient memory, wait a while, and then retry the operation. In other cases, acquire all the log data, and then contact maintenance personnel.
KAQM37182-E	The import definition information on the specified import source is invalid.	The import definition information is invalid because the import-target file system was re-created. (O) Delete the import definition information, re-define it, and then retry the operation.
KAQM37183-E	The import-source file server could not be connected to because the user name or password is invalid, or you do not have the proper access permissions.	The import-source file server could not be connected to because the user name or password is invalid, or you do not have the proper access permissions. (O) Check the user name or password, and then retry the operation. If the problem persists, make sure that the specified user can access all the import-source files and directories, and then retry the operation.
KAQM37184-W	Some ACEs could not be imported. (file or directory path = <i>file-or-directory-path</i>)	The import of a file or directory was completed, but some ACEs could not be imported because an attempt to access the domain controller failed, or the ACE user or group set for the import-source file or directory has not been registered in the domain controller. (O) Check the ACEs set for the import-source file or directory, and set ACEs

Message ID	Message	Description and Action
		to the imported file or directory as needed.
KAQM37185-E	The import of data from another file server failed because ACEs could not be imported. (file path = <i>file-path</i>)	ACEs could not be imported because an attempt to access the domain controller failed, or the ACE user or group set for the import-source files or directories has not been registered in the domain controller. (O) Check for network problems. If there are no network problems, make sure that the user or group set for the import-source files or directories is registered in the domain controller or an account mapping file. If the problem cannot be resolved, revise the CIFS service operation status, authentication mode, and user mapping settings.
KAQM37186-E	The import-source file or directory was updated, or the import-source share setting was changed. (import-source file or directory path = <i>import-source-file-or-directory-path</i>)	The import-source file or directory was renamed or deleted, or the import-source share setting was changed. (O) If the import-source file or directory was renamed or deleted, set the import-source share as read-only, and then retry the operation. If the import-source share setting was changed, confirm that the import-source share can be accessed, and if not, revise the setting.
KAQM37187-E	The import-source file or directory was updated, or the import-source share setting was changed.	The import-source file or directory was renamed or deleted, or the import-source share setting was changed. (O) If the import-source file or directory was renamed or deleted, set the import-source share as read-only, and then retry the operation. If the import-source share setting was changed, confirm that the import-source share can be accessed, and if not, revise the setting.
KAQM37188-E	A communication failure occurred while data was being imported from another server. (import-source file or directory path = <i>import-source-file-or-directory-path</i>)	There might be a problem with the network or import-source file system. (O) Check the status of the network and import-source file system, resolve any problems, and then retry the operation. If the problem persists, acquire all the log data, and then contact maintenance personnel.

Message ID	Message	Description and Action
KAQM37189-E	A communication failure occurred while data was being imported from another server.	There might be a problem with the network or import-source file system. (O) Check the status of the network and import-source file system, resolve any problems, and then retry the operation. If the problem persists, acquire all the log data, and then contact maintenance personnel.
KAQM37190-E	The import-source file or directory could not be accessed. (import-source file or directory path = <i>import-source-file-or-directory-path</i>)	The import-source file or directory could not be accessed because you do not have the proper access permissions. (O) Register an account into the import definition information that can access all the import-source files and directories.
KAQM37191-E	The import-source file or directory could not be accessed.	The import-source file or directory could not be accessed because you do not have the proper access permissions. (O) Register an account into the import definition information that can access all the import-source files and directories.
KAQM37192-E	The import-target file system does not exist.	The import-target file system does not exist. (O) Delete the import definition information, re-define it, and then retry the operation.
KAQM37193-E	An all-data import was interrupted because a failover occurred during the import, or the CIFS service is not running normally.	An all-data import was interrupted because a failover occurred during the import, or the CIFS service is not running normally. (O) If a failover has occurred, confirm whether the all-data import has restarted on the failover destination. If a failover has not occurred, make sure that the CIFS service is running normally, and then retry the all-data import.
KAQM37194-E	A timeout occurred during communication with the import-source file server.	There might be a problem with the import-source file server or the network. (O)

Message ID	Message	Description and Action
		Check the status of the import-source file server and the network, fix the cause of the error, and then retry the operation. If there are no problems with the status of the import-source file server or the network, change the timeout value for communication with the file server, and then retry the operation. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM37195-E	An attempt to change the import method failed because the import in the specified import definition information has not been started.	An attempt to change the import method failed because the import has not been started. (O) Check whether the import in the specified import definition information has started. If the import has not started, specify an import method, and then start the import.
KAQM37196-E	An import from another file server failed. (reason = {insufficient memory an I/O error no disk space some other error})	An import from another file server failed due to the indicated reason. (O) In the list of file systems, check the status of the file system. If the file system has an error status, follow the error recovery procedure provided in online Help. If there is insufficient memory, wait a while, and then retry the operation. If there is insufficient disk space, expand the file system, and then retry the operation. If migration to an HCP system and the data import are being performed concurrently, re-check the communications with the HCP system, and then retry the operation. In other cases, wait a while, and then retry the operation. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM37197-E	The import-source file or directory does not exist. (path of the import-source file or directory = <i>path-of-the-import-source-file-or-directory-path</i>)	The import-source file or directory does not exist. (O) Specify the path of an existing file or directory.
KAQM37198-E	The option <i>option-name</i> cannot be specified for namespace-referencing file systems.	The file system is for referencing namespaces. (O)

Message ID	Message	Description and Action
		Specify a file system that is not used for referencing namespaces, and then retry the operation.
KAQM37199-E	A namespace-referencing file system cannot be specified.	The file system is for referencing namespaces. (O) Specify a file system that is not used for referencing namespaces, and then retry the operation.
KAQM37200-E	Automatic updating of the data-referencing file system failed. (reason = {insufficient memory an I/O error no disk space HCP communication error authentication error some other error}, file system name = <i>file-system-name</i>)	Automatic updating of the data-referencing file system failed. (O) If there is not enough memory, increase the amount of available memory. If there is not enough disk space, increase the size of the file system. If an I/O error occurred, confirm the status of the file system from the list of file systems. If an HCP communication error occurred, confirm the status of the network. If an authentication error occurred, revise the HCP access settings. For all other errors, execute the <code>arcrestore</code> command. If the problem persists, acquire all the log files, and contact maintenance personnel.
KAQM37201-E	An attempt to restore a past version of the directory failed. (reason = {insufficient memory an I/O error no disk space})	An attempt to restore a past version of the directory failed due to the reason shown in the message dialog. (O) Check the status of the file system. If an error has occurred, follow the recovery procedure in online Help to resolve the issue. If there is not enough memory, wait a while, and then retry the operation. If there is not enough disk capacity, expand the file system, and then retry the operation. In all other cases, acquire all the log data, and contact Product Support.
KAQM37202-E	A past version of the directory cannot be restored, because the directory is already in use. (restoration path = <i>path</i>)	A past version of the directory cannot be restored, because the directory is already in use. (O) Change the path of the file or directory in the restoration path, and retry the operation.
KAQM37204-I	The detailed message of the KAQM37247-W message is as follows: <i>message-details</i>	None. (O)

Message ID	Message	Description and Action
		Follow the instructions in the detailed message.
KAQM37205-E	The attempt to restore a past version of the directory failed. (reason = {insufficient memory an I/O error no disk space some other error}, restoration path = <i>path</i>)	The attempt to restore a past version of the directory failed. (O) Check the status of the file system. If an error has occurred, follow the recovery procedure in Online Help to resolve the issue. If there is not enough memory, wait a few minutes and retry the operation. If there is not enough disk capacity, expand the file system and retry the operation. In all other cases, download all the log data and contact Product Support.
KAQM37206-E	An attempt to create the past version directory has failed. (reason = {no such directory insufficient memory lock timeout an I/O error no disk space read only mounted directory is already being used some other error})	The attempt to create the past version directory failed due to the cause explained in the reason. (O) For details about the failed directory, see the KAQM37208-E or KAQM37319-E message output to the Management log file (<i>management.log</i>). If there is insufficient memory or a lock timeout occurred, do not perform any other operations while a migration is being performed. If there is insufficient disk space, expand the file system, and then try again. If the file system is mounted as read-only, re-mount the file system as readable and writable. If the directory where the past version directory will be created is being used, change the path of the file or directory being used, and then retry the operation. In all other cases, confirm that no HCP communication errors are occurring. If no HCP communication errors are occurring, acquire all the log data, and then contact maintenance personnel. Details: <i>See G. Actions for When a Timeout Occurs due to the Inability to Secure the Resources Used for Processing, and follow the procedure that is listed.</i>
KAQM37207-E	An attempt to delete the past version directory has failed. (reason = {no such directory insufficient memory an I/O error no disk space currently being accessed some other error})	The attempt to delete the past version directory failed due to the cause explained in the reason. (O) Refer to the error message KAQM37225-E in the management log

Message ID	Message	Description and Action
		file (<code>management.log</code>) for the failed directory. If the failure was caused by insufficient memory, wait a while, and then try again. If the cause was insufficient disk space, expand the file system, and then try again. If the cause was the directory currently being accessed, request that access stop on the client. Otherwise, acquire all the log data, and then contact maintenance personnel.
KAQM37208-E	An attempt to create the past version directory has failed. (reason = {no such directory insufficient memory lock timeout an I/O error no disk space read only mounted directory is already being used some other error}, path = <i>directory-path</i>)	The attempt to create the past version directory failed due to the cause explained in the reason. (O) If there is insufficient memory or a lock timeout occurred, check whether the system is heavily loaded. If there is insufficient disk space, expand the file system. If the file system is mounted as read-only, re-mount the file system as readable and writable. If the directory where the past-version directory is to be created is being used, change the path of the file or directory. In other cases, acquire all log data, and then contact maintenance personnel.
KAQM37209-I	Automatic updating of the data-referencing file system started.	Automatic updating of the data-referencing file system started. (O) No action is necessary.
KAQM37210-I	Automatic updating of the data-referencing file system ended.	Automatic updating of the data-referencing file system ended. (O) No action is necessary.
KAQM37211-I	Automatic updating of the data-referencing file system was skipped.	The data-referencing file system has already been automatically updated. (O) No action is necessary.
KAQM37212-E	Automatic updating of the data-referencing file system failed.	Processing was canceled because an error occurred while automatically updating the data-referencing file system. (O) Identify the cause of the problem by looking at the message that was output before this message, and then take appropriate action.

Message ID	Message	Description and Action
KAQM37213-I	Deletion of the temporary directory created when HCP data migrated from other sites was shared has started.	Deletion of the temporary directory started. (O) No action is necessary.
KAQM37214-I	Deletion of the temporary directory created when HCP data migrated from other sites was shared has ended.	Deletion of the temporary directory ended. (O) No action is necessary.
KAQM37215-I	Deletion of the temporary directory created for the automatic update was skipped. (file system name = <i>file-system-name</i>)	The temporary directory has already been deleted. (O) No action is necessary.
KAQM37216-E	Deletion of the temporary directory created when HCP data migrated from other sites was shared has failed.	Processing was canceled because an error occurred while deleting the temporary directory. (O) No action is necessary because the temporary directory will be deleted the next time data is periodically deleted. If the problem persists, acquire all the log files, and contact maintenance personnel.
KAQM37217-E	Deletion of the temporary directory created for the automatic update failed. (reason = {no disk space some other error}, file system name = <i>file-system-name</i>)	An error occurred while deleting the temporary directory. (O) If there is not enough disk space, confirm the free space on the file system. If there is not enough free space, allocate more free space, and then re-execute the command. If the problem persists, acquire all the log files, and then contact maintenance personnel.
KAQM37219-E	The processing cannot be executed because an all-data import is not complete.	The processing cannot be executed because an all-data import is not complete. (O) Make sure the import is complete, and then retry the operation.
KAQM37220-E	A tiered file system cannot be specified.	The specified file system is a tiered file system. (O) Specify another type of file system. And then retry the operation.
KAQM37221-E	The input is invalid.	The specified IP address format is invalid. (O)

Message ID	Message	Description and Action
		See Help, and then enter a valid value.
KAQM37222-E	The input is invalid.	The specified IP address is special address that cannot be set. (O) See Help, and then enter a valid value.
KAQM37223-E	The input value is invalid. The resume threshold must be greater than the suspend threshold.	The resume threshold must be greater than the suspend threshold. (O) Specify a resume threshold value that is greater than the suspend threshold value.
KAQM37224-I	An all-data import is being stopped.	An all-data import is being stopped. (O) No action is required.
KAQM37225-E	An attempt to delete the past version directory has failed. (reason = {no such directory insufficient memory an I/O error no disk space read only mounted currently being accessed some other error}, path = <i>directory-path</i>)	The attempt to delete the past version directory failed due to the cause explained in the reason. (O) If there is insufficient memory, wait a while, and then try again. If there is insufficient disk space, expand the file system, and then try again. If the file system is mounted as read-only, remount the file system as readable and writable. If the directory is currently being accessed, request that the clients stop accessing it. In all other cases, acquire all the log data, and then contact maintenance personnel.
KAQM37226-I	Restoration of a data-referencing file system started. (file system name = <i>file-system-name</i>)	Restoration of a data-referencing file system started. (O) No action is necessary.
KAQM37227-I	Restoration of a data-referencing file system ended. (file system name = <i>file-system-name</i>)	Restoration of a data-referencing file system ended. (O) No action is necessary.
KAQM37228-E	Restoration of a data-referencing file system failed. (reason = {insufficient memory no disk space HCP communication error authentication error some other error}, file system name = <i>file-system-name</i>)	Restoration of a data-referencing file system failed. (O) Identify the cause of the problem by looking at the message that was output before this message, and then take appropriate action.
KAQM37229-E	Collection of import-source object information stopped because a failover occurred	Collection of import-source object information stopped because a failover occurred during an all-data import, or

Message ID	Message	Description and Action
	during an all-data import, or the CIFS service is not running normally.	the CIFS service is not running normally. (O) If a failover occurred, make sure that the all-data import at the failover destination has restarted. If a failover did not occur, make sure that the CIFS service is running normally, and then retry the all-data import.
KAQM37230-I	Collection of object information from another file server started. (import definition name = <i>import-definition-name</i>)	Collection of object information from another file server has started. (O) No action is necessary.
KAQM37231-I	Collection of object information from another file server is complete. (import definition name = <i>import-definition-name</i>)	Collection of object information from another file server is complete. (O) Check the details in the <code>hsmarc.log</code> file.
KAQM37232-E	Collection of object information from another file server failed. (import definition name = <i>import-definition-name</i>)	Collection of object information from another file server has failed. (O) If NFS shares are being used, revise the settings so that the import-source file server can correctly export files. After an all-data import or a scan is finished, retry the operation. If the problem persists, acquire all the log data, and then contact maintenance personnel.
KAQM37233-I	The import did not finish because one or more files or directories have been moved and are not recognized as import sources, or because there was already data in an import-target directory when the import started. Reattempt an all-data import. If the import does not finish even after several attempts, acquire all the log data, and contact the support center.	The import did not finish because one or more files or directories have been moved and are not recognized as import sources, or because there was already data in an import-target directory when the import started. (O) Check whether there was data in an import-target directory when the import started. If there was no data in any of the import-target directories, reattempt an all-data import. If the import does not finish even after several attempts, acquire all the log data, and contact the support center. Supplementary note: The KAQM37233-I message might be output if a node failure occurs or the file system capacity is insufficient. If this happens, the KAQM37233-I message is still output after an all-file

Message ID	Message	Description and Action
		import is performed again. Run the <code>datamigratestatus</code> command with the <code>--incompletionlist</code> option to verify that the displayed files are all imported. If the files have been imported, no action is necessary. If some files have not been imported, take action by, for example, manually copying the files one-by-one. Note that, if hard links for which different subtree quotas are set have not been imported to the import source and import destination, check, and if necessary, revise the quota settings, and then create hard links for each.
KAQM37234-E	Updating the list or count file used for import completion verification has failed. (reason = {an I/O error no disk space some other error})	Updating the list or count file used for import completion verification has failed. (O) In the list of file systems, check the status of the file system. If the file system has an error status, follow the error recovery procedure provided in online Help. If there is not enough unused capacity, free up the necessary amount, and then execute the command. In other cases, acquire all the log files, and then contact maintenance personnel.
KAQM37235-E	Recovery of the list or count file used for import completion verification has failed.	Recovery of the list or count file used for import completion verification has failed. (O) Acquire all the log data, and then contact maintenance personnel.
KAQM37236-W	An attempt to delete the past version directory failed during a migration. (reason = {no such directory insufficient memory lock timeout an I/O error no disk space currently being accessed some other error})	An attempt to delete the past version directory failed due to the cause shown in the reason. (O) The deletion of the past version directory will be reattempted during the next migration. No action is necessary. Details: See <i>G. Actions for When a Timeout Occurs due to the Inability to Secure the Resources Used for Processing</i> , and follow the procedure that is listed.
KAQM37237-W	An attempt to delete the past version directory failed during a periodic deletion. (reason = {no such directory insufficient	An attempt to delete the past version directory failed due to the cause shown in the reason.

Message ID	Message	Description and Action
	memory an I/O error no disk space currently being accessed some other error}, path = <i>directory-path</i>)	(O) The deletion of the past version directory will be reattempted during the next periodic deletion. No action is necessary.
KAQM37238-W	An attempt to delete the past version directory failed during a periodic deletion. (reason = {no such directory insufficient memory an I/O error no disk space currently being accessed some other error})	An attempt to delete the past version directory failed due to the cause shown in the reason. (O) The deletion of the past version directory will be reattempted during the next periodic deletion. No action is necessary.
KAQM37239-E	An attempt to create the past version directory has failed. (reason = {no such directory insufficient memory lock timeout an I/O error no disk space read only mounted directory is already being used some other error})	The attempt to create the past version directory failed due to the cause explained in the reason. (O) If there is insufficient memory or a lock timeout occurred, do not perform any other operations while a migration is being performed. If there is insufficient disk space, expand the file system, and then try again. If the file system is mounted as read-only, re-mount the file system as readable and writable. If the directory where the past version directory will be created is being used, change the path of the file or directory being used, and then retry the operation. In all other cases, acquire all the log data, and then contact maintenance personnel.
KAQM37240-E	An attempt to delete the past version directory has failed. 		error details, and then execute the <code>arcrestore</code> command. If the problem persists, acquire all the log files, and contact maintenance personnel.
KAQM37246-E	Updating of some files or directories failed. (reason = {insufficient memory an I/O error no disk space an HCP communication error an authentication error a device or resource is in use some other error}, file system name = <i>file-system-name</i>)	Updating of some files or directories failed due to the cause explained in the reason. (O) If there is not enough memory, increase the amount of available memory. If there is not enough disk space, increase the size of the file system. If an I/O error occurred, confirm the status of the file system from the list of file systems. If an HCP communication error occurred, confirm the status of the network. If an authentication error occurred, revise the HCP access settings. If the device or resource is in use, confirm that no shares have been created under the directory. If such shares exist, delete them. Take action according to the error details, and then execute the <code>arcrestore</code> command. If the problem persists, acquire all the log files, and contact maintenance personnel.
KAQM37247-W	Restoration of one or more past version directories failed.	See the File Services Manager log file (<code>management.log</code>) to find the cause. (O) See the File Services Manager log file (<code>management.log</code>), and then take appropriate action.
KAQM37248-W	Shared data could not be acquired. (file system name = <i>file-system-name</i>)	Shared data could not be acquired because it was not migrated to the HCP system or migration of the shared data failed. (O) Wait until a migration is executed for the file system containing the shared data, or ask the system administrator managing the shared data to perform a migration as soon as possible.
KAQM37249-I	Processing might take a while.	This message is output before processing that takes a while is executed. (O) None
KAQM37250-E	Shared data cannot be acquired because none exists. (file system name = <i>Read-</i>	A namespace was specified to which data has never been migrated from a

Message ID	Message	Description and Action
	<i>only-file-system-name</i> , FQDN = <i>FQDN-of-the-namespace-associated-with-the-file-system-being-read-from</i>)	file system, and then an attempt was made to acquire shared data. (O) Make sure that the specified FQDN of the namespace is correct. If the FQDN of the namespace is correct, perform a migration from the file system being read from. Then, wait a while or execute the <code>arcrestore</code> command on the read-only file system.
KAQM37251-E	An error occurred during acquisition of shared data. (file system name = <i>Read-only-file-system-name</i> , FQDN = <i>FQDN-of-the-namespace-associated-with-the-file-system-being-read-from</i>)	No data to be shared exists on the HCP system. An error might have occurred during a migration from the file system being read from. (O) Make sure that the file system being read from is successfully migrated. Then, wait a while or execute the <code>arcrestore</code> command on the read-only file system.
KAQM37252-E	An error occurred during acquisition of shared data. (file system name = <i>Read-only-file-system-name</i>)	There is not enough unused capacity to acquire the data to be shared. (O) Expand the read-only file system. Then, wait a while or execute the <code>arcrestore</code> command on the read-only file system.
KAQM37253-E	An insufficient memory error occurred during acquisition of shared data. (file system name = <i>Read-only-file-system-name</i>)	Memory allocation failed. (O) Wait a while, and then execute the <code>arcrestore</code> command on the read-only file system. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM37254-E	The connection with the HCP system failed during acquisition of shared data. (file system name = <i>Read-only-file-system-name</i> , FQDN = <i>FQDN-of-the-namespace-associated-with-the-file-system-being-read-from</i>)	An error occurred while communicating with the HCP system. The FQDN of the namespace associated with the file system being read from might have been changed. (O) Make sure that the specified FQDN of the namespace is correct and the network status is okay. Then, wait a while or execute the <code>arcrestore</code> command on the read-only file system. If the error persists, acquire all the log data, and then contact maintenance personnel.

Message ID	Message	Description and Action
KAQM37255-E	The connection with the HCP system failed during acquisition of shared data. (file system name = <i>Read-only-file-system-name</i> , FQDN = <i>FQDN-of-the-namespace-associated-with-the-file-system-being-read-from</i>)	There might be a problem with the HCP system or the network. (O) Check the status of the HCP system and the network, and resolve the problem. Then, wait a while or execute the <code>arcrestore</code> command on the read-only file system. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM37256-E	The connection with the HCP system timed out during acquisition of shared data. (file system name = <i>Read-only-file-system-name</i> , FQDN = <i>FQDN-of-the-namespace-associated-with-the-file-system-being-read-from</i>)	There might be a problem with the HCP system or the network. (O) Check the status of the HCP system and the network, and resolve the problem. Then, wait a while or execute the <code>arcrestore</code> command on the read-only file system. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM37257-E	The SSL connection with the HCP system failed during acquisition of shared data. (file system name = <i>Read-only-file-system-name</i> , FQDN = <i>FQDN-of-the-namespace-associated-with-the-file-system-being-read-from</i>)	The SSL connection with the HCP system failed. (O) Check the status of the HCP system, the SSL settings, and the network, and resolve the problem. Then, wait a while or execute the <code>arcrestore</code> command on the read-only file system. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM37258-E	Authentication failed during acquisition of shared data. (file system name = <i>Read-only-file-system-name</i> , FQDN = <i>FQDN-of-the-namespace-associated-with-the-file-system-being-read-from</i>)	The user name, password, FQDN of the namespace, or an HCP SSL setting for the read-only file system is invalid. (O) Revise the input values and settings.
KAQM37259-E	Name resolution of the FQDN failed during acquisition of shared data. (file system name = <i>Read-only-file-system-name</i> , FQDN = <i>FQDN-of-the-namespace-associated-with-the-file-system-being-read-from</i>)	Name resolution could not be properly performed. The HCP system could not be temporarily communicated with due to, for example, a network error or a high load on the HCP system. (O) Make sure that name resolution can be performed in the environment. Then, wait a while or execute the <code>arcrestore</code> command on the read-only file system.
KAQM37260-E	The connection with the HCP system ended during	Communication with the HCP system ended due to a resource group being

	import-source SID = <i>import-source-SID</i>)	confirm whether the account is registered on the authentication server. If local authentication is set for the import-target authentication mode, confirm whether the account information is properly set in the account mapping file.
KAQM37297-E	Multiple instances of an import-source SID exist in the account mapping file. (line = <i>line-number</i> , duplicated SID = <i>duplicated-SID</i>)	Multiple instances of an import-source SID exist in the account mapping file. (O) Check the account mapping file, and then set valid SIDs.
KAQM37298-E	Multiple instances of an item exist in the account mapping file. (line = <i>line-number</i> , duplicated item = ' <i>duplicated-item</i> ')	Multiple instances of an item exist in the account mapping file. (O) Confirm the content of the account mapping file.
KAQM37299-E	An account without the execute permission was used to execute the command.	An account without the execute permission was used to execute the command. (O) Use an account with administrator permissions to execute the command.
KAQM37300-E	ID information related to the import-source account name could not be acquired. (detailed information = <i>detailed-information</i>)	ID information related to the import-source account name could not be acquired. (O) Wait a while, and then retry the operation. If the problem persists, acquire all the log data, and then contact maintenance personnel.
KAQM37301-E	Replica HCP information cannot be set because HCP information used for accessing data has not been set.	HCP information used for accessing data has not been set. (O) Set HCP information used for accessing data, and then retry the operation.
KAQM37302-E	Replica HCP information has not been set.	Replica HCP information has not been set. (O) Set Replica HCP information, and then retry the operation.
KAQM37303-Q	Do you still want to delete the WORM task schedule? (y/n)	This confirmation message is output before a WORM task schedule is deleted. (O) Enter y or n.

Message ID	Message	Description and Action
KAQM37304-W	The execution of the cache resident function for a file was canceled. (file system = <i>file-system-name</i>)	There is not enough free disk space to execute the cache resident function. (O) If the used disk space on the file system does not stay below the stub threshold during periodic stub processing, execute the <code>arcresidentresult</code> command to check the total size of the file to be pinned into the cache. Also, check the stub threshold value, the cache resident policy, and the total size of the file system.
KAQM37305-W	Restoration of an account mapping file failed.	Restoration of an account mapping file failed. (O) Redefine the account mapping file as necessary.
KAQM37306-E	A schedule update failed.	A schedule update failed. (O) Retry the operation. If the problem persists, acquire all the log data, and then contact maintenance personnel.
KAQM37307-E	The cache resident function failed for a file. (reason = {insufficient memory an I/O error no disk space some other error}, file system = <i>file-system-name</i>)	An error occurred during cache resident processing for the file system. (O) If there is not enough memory, increase the amount of available memory. If there is not enough disk space, increase the size of the file system. If an I/O error occurred, confirm the status of the file system from the list of file systems. Take action according to the error details, and then check the results of the next cache resident processing execution. If the problem persists, acquire all the log files, and then contact maintenance personnel.
KAQM37308-W	Restoration of the cache resident policy failed, but processing continued. (file system = <i>file-system-name</i>)	Restoration of the cache resident policy failed. (O) If a cache resident policy was set up, set it up again.
KAQM37309-E	An attempt to read the file failed. (file path = <i>file-path</i>)	An attempt to read the file failed. (O) Confirm that the file exists at the specified path. If the file does exist,

Message ID	Message	Description and Action
		confirm that the file can be read. If the problem persists, acquire all the log files, and contact maintenance personnel.
KAQM37310-E	Memory is insufficient.(service information = <i>service-information</i>)	An attempt to allocate memory has failed. (O) Wait a while, and then retry the operation. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM37311-E	An attempt to set the alternate owner or group failed because the specified name cannot be recognized as an alternate owner or group. (name = <i>name</i>)	An attempt to set the alternate owner or group failed because the specified name was not recognized as an alternate owner or group. (O) To specify a local owner or group for the alternate account, verify that the owner or group is registered in the system. To specify a domain owner or group for the alternate account, verify that there are no problems with the network. If there are no problems with the network, verify that the domain owner or group is registered in the domain controller.
KAQM37312-I	An auto-WORM or auto-deletion operation started. (file system = <i>file-system-name</i>)	An auto-WORM or auto-deletion operation started. (O) No action is necessary.
KAQM37313-I	An auto-WORM or auto-deletion operation ended. (file system = <i>file-system-name</i>)	An auto-WORM or auto-deletion operation ended. (O) No action is necessary.
KAQM37314-E	An attempt to restore the file systems failed because the user disk does not have enough unused capacity for the restoration.	The user disk does not have enough unused capacity for the restoration. (O) Increase the capacity of the user disk, perform a new installation of the OS, and then retry the operation.
KAQM37315-E	Restoration of a file system failed during restoration of the system settings. (file system = <i>file-system-name</i> , detailed message = <i>detailed-message</i>)	Processing ended because some errors occurred during restoration processing. (O) See the detailed message, take appropriate action, and then execute the <code>arcrestore</code> command on the file system. If the problem persists, acquire all the log data, and then contact maintenance personnel.

Message ID	Message	Description and Action
KAQM37316-E	Restoration of a file system failed during restoration of the system settings. (file system = <i>file-system-name</i> , detailed message = <i>detailed-message</i>)	Processing ended because some errors occurred during restoration processing. (O) Acquire all the log data, and then contact maintenance personnel.
KAQM37317-W	A warning was output for a file system during restoration of the system settings. (file system = <i>file-system-name</i> , detailed message = <i>detailed-message</i>)	A warning was output during restoration processing. (O) See the detailed message and take appropriate action.
KAQM37318-E	An attempt to update a system file failed. The system file and the backup of the file on the HCP system are no longer the same. (reason = {insufficient memory an I/O error no disk space some other error})	An attempt to update a system file failed. The system file and the backup of the file on the HCP system are no longer the same. (O) If the reason is insufficient memory, wait a while, and then retry the operation. If there is not enough unused capacity, free up the necessary amount, and then retry the operation. If the reason is an I/O error, check the status of the file system, recover the system, and then retry the operation. In other cases, acquire all the log data, and then contact maintenance personnel.
KAQM37319-E	Creation of a past version directory failed. (path = <i>directory-path</i> , detailed message = <i>detailed-message</i>)	Creation of a past version directory failed. (O) See the detailed message, take appropriate action, and then retry the operation. If the problem persists, acquire all the log data, and then contact maintenance personnel.
KAQM37320-E	Updating of the task log failed. (reason = {task log does not exist insufficient memory an I/O error no disk space some other error}) If the <code>arcresultctl</code> command is executed, the reason the task failed to execute for a file or directory is not displayed. (file or directory path = <i>file-or-directory-path</i> , message ID = <i>message-ID</i>)	Updating of the task log failed for the reason shown. The task log might have been deleted, or an error might have occurred while updating the task log. (O) Check the message referenced by the message ID displayed for the reason the task failed. If the task log was deleted during task execution, log information is not displayed. In all other cases, check the status of the file system from the list of file systems. If an error occurred on the file system, follow the error recovery procedure provided in online Help. If there is not enough memory, wait until the load on the system decreases, and

Message ID	Message	Description and Action
		then retry the operation. If there is not enough unused capacity, free up the necessary amount, and then retry the operation. If the problem cannot be resolved, acquire all the log data, and then contact maintenance personnel.
KAQM37321-E	Recall processing failed because data on the HCP system was not found.	Recall processing failed because data on the HCP system was not found. (O) If HCP system data has not been restored from a file system, acquire all the log data, and then contact maintenance personnel. If HCP system data has been restored from a file system, delete stub files, as necessary. If there is no data on the HCP system, stub information cannot be restored.
KAQM37322-E	The import-source file server could not be connected to. (host name = <i>host-name</i> , share path = <i>share-path</i> , import-source file or directory path = <i>import-source-file-or-directory-path</i>)	The import-source host name or share path is invalid, or there might be a problem with the setting up of the import-source file server or the network. (O) Revise the settings so that the import-source file server can correctly export files. If the settings are okay, check the host name or share path of the import-source file server and the status of the network, remove the cause of the problem, and then retry the operation. If the problem persists, acquire all the log data, and then contact maintenance personnel.
KAQM37323-E	The import-source file server could not be connected to.	The import-source host name or share path is invalid, or there might be a problem with the setting up of the import-source file server or the network. (O) Check the HSM Core log (<i>hsmarc.log</i>), and see if the KAQM37322-E message has been output. If it has, identify the host name or share path from the message. Revise the settings so that the import-source file server can correctly export files. If the settings are okay, check the host name or share path of the import-source file server and the status of the network, remove the cause of the problem, and then retry the operation. If the problem persists, acquire all the log

Message ID	Message	Description and Action
		data, and then contact maintenance personnel.
KAQM37325-E	A timeout occurred while stopping an import.	Stopping of an import failed. (O) Wait a while or until the import is complete, and then retry the operation. If the problem persists even after the import is complete, acquire all the log data, and then contact maintenance personnel.
KAQM37329-E	The import-source file server could not be connected to.	The import-source host name or share path is invalid, or there might be a problem with the setting up of the import-source file server or the network. (O) Revise the settings so that the import-source file server can correctly export files. If the settings are okay, check the host name or share path of the import-source file server and the status of the network, remove the cause of the problem, and then retry the operation. If the problem persists, acquire all the log data, and then contact maintenance personnel.
KAQM37330-E	Log information cannot be output because task log information does not exist for the specified policy on the target file system. (file system = <i>file-system-name</i> , policy = <i>policy-name</i>)	The specified file system name or policy name might be invalid, or the task for the target policy might not have been executed. (O) Verify that the file system name and policy name are valid. If they are, verify that a task was executed. In all other cases, acquire all the log data, and then contact maintenance personnel.
KAQM37331-Q	Are you sure you want to delete all task log information for the specified policy on the target file system? (y/n)	This confirmation message is output before task log information for the specified policy is deleted. (O) Enter y or n.
KAQM37332-Q	Are you sure you want to delete all task log information on the specified file system? (y/n)	This confirmation message is output before all the task log information on the specified file system is deleted. (O) Enter y or n.
KAQM37333-E	The specified import definition information does not exist. (specified import definition	The specified import definition information does not exist.

Message ID	Message	Description and Action
	name = <i>import-definition-name</i>)	(O) Specify the name of an existing import definition.
KAQM37335-E	The specified import definition name is already in use.	The specified import definition name is already in use. (O) Specify another import definition name, and then retry the operation.
KAQM37336-E	The specified import definition cannot be edited.	The specified import definition cannot be edited. (O) Revise the import definition specified for editing, and then retry the operation.
KAQM37337-E	Settings failed because duplicate alternate account settings were specified.	Duplicate alternate account settings were specified. (O) Specify either an alternate owner or an alternate group, not both. If only one is set and an error still occurs, then alternate account settings that are no longer necessary might be stored in the system. If the alternate owner or group is already set, delete any unnecessary settings.
KAQM37338-E	An attempt to perform an operation on the file system failed. (reason = {insufficient memory an I/O error no disk space some other error})	An attempt to perform an operation on the file system failed. (O) If the reason for the error is insufficient memory, wait until the load on the system decreases, and then retry the operation. If the reason is insufficient disk space, expand the file system, and then retry the operation. In all other cases, acquire all the log data, and then contact maintenance personnel.
KAQM37339-E	The OS versions in the cluster are not the same.	The versions of the installed OSs in the cluster are not the same. (O) Check the OS versions in the cluster, install OS products of the same version, and then retry the operation.
KAQM37340-E	An attempt to set information for a file or directory failed. (reason = {insufficient memory an I/O error no disk space an HCP communication error an authentication error a device or resource is in use	An attempt to set information for a file or directory failed due to the indicated reason. (O) If there is insufficient memory, check whether the system is heavily loaded.

Message ID	Message	Description and Action
	some other error}, file or directory path = <i>file-or-directory-path</i>)	If there is insufficient disk space, expand the file system. If an I/O error occurred, confirm the status of the file system from the list of file systems. If an HCP communication error occurred, confirm the status of the network. If an authentication error occurred, revise the HCP access settings. If the device or resource is in use, confirm that no shares have been created under the directory. If such shares exist, delete them. Take action according to the error details, and then retry the operation. If the problem persists, acquire all the log files, and contact maintenance personnel.
KAQM37341-E	Acquisition of file information or directory information failed. (file or directory path = <i>file-or-directory-path</i>)	An error occurred during acquisition of file information or directory information. An error might have occurred in the file system. (O) In the list of file systems, check the status of the file system. If an error occurred on the file system, follow the error recovery procedure provided in online Help. In all other cases, acquire all the log data, and then contact maintenance personnel.
KAQM37342-E	An unexpected error occurred while accessing the import-source file or directory. (import-source file or directory path = <i>import-source-file-or-directory-path</i>)	There might be a problem with the network or import-source file system. (O) Check the status of the network and import-source file system, resolve any problems, and then retry the operation. If the problem persists, acquire all the log data, and then contact maintenance personnel.
KAQM37343-E	An unexpected error occurred while accessing the import-source file or directory.	There might be a problem with the network or import-source file system. (O) Check the HSM Core log (<i>hsmarc.log</i>), and see if the KAQM37342-E message has been output. If it has, identify the import-source file or directory path. Check the status of the network and the import-source server file system. After removing the cause of the problem, retry the operation. If the problem persists, acquire all the log data, and then contact maintenance personnel.
KAQM37344-E	Importing from another file server failed because import	Before an import from another file server could be completed, import

If the problem persists, acquire all the log data, and then contact maintenance personnel.
KAQM37377-E	Initialization of a past-version directory, which is no longer required, failed. (reason = {no such directory insufficient memory an I/O error no disk space currently being accessed some other error})	Initialization of a past-version directory, which is no longer required, failed due to the cause explained in the reason. (O) See the KAQM37225-E message related to the failed directory in the Management log file (<code>management.log</code>). If there is insufficient memory, wait a while, and then retry the operation. If there is insufficient disk space, expand the file system, and then retry the operation. If the directory is currently being accessed, ask the client to stop accessing the failed directory. In all other cases, acquire all the log data, and then contact maintenance personnel.
KAQM37378-I	The rebuilding of task management information will	The rebuilding of task management information will now start so that all

Message ID	Message	Description and Action
	now start so that all the data in a file system for which a migration is to be performed can be transferred to the HCP system. (file system = <i>file-system-name</i>)	the data in a file system for which a migration is to be performed can be transferred to the HCP system. (O) See the system messages to check the status of the rebuilding of the task management information.
KAQM37379-I	The system is now starting or stopping the rebuilding of task management information for the file system <i>file-system-name</i> .	The system is now starting or stopping the rebuilding of task management information. (O) No action is necessary.
KAQM37380-W	Rebuild processing was canceled and the <code>arccorrection</code> command was started because the <code>arccorrection</code> command was executed with 'all' specified for the <code>-t</code> option during the rebuilding of the task management information of the file system (<i>file-system-name</i>).	Rebuild processing was canceled and the <code>arccorrection</code> command was started because the <code>arccorrection</code> command was executed with 'all' specified for the <code>-t</code> option during the rebuilding of the task management information of the file system. (O) No action is necessary.
KAQM37381-E	The specified file system is not a tiered file system.	The specified file system is not a tiered file system. (O) Specify another file system, and then retry the operation.
KAQM37382-E	The import of data from another file server failed because the user or group set for the import-source file or directory cannot be recognized. (reason = {a domain controller access failure the user or group was not found CIFS service user mapping is not set insufficient memory some other error})	The import of data from another file server failed because the user or group set for the import-source file or directory cannot be recognized due to the indicated reason. (O) If access to the domain controller failed, then check for network problems. If the user or group was not found, make sure that the user or group set for the import-source file or directory is registered in the domain controller or an account mapping file. If the problem cannot be resolved, revise the CIFS service operation status, authentication mode, and user mapping settings. If there is insufficient memory, wait a while, and then retry the operation. In other cases, acquire all the log data, and then contact maintenance personnel.
KAQM37383-E	The import of data from another file server failed	ACEs could not be imported because an attempt to access the domain

Message ID	Message	Description and Action
	because ACEs could not be imported.	controller failed, or the ACE user or group set for the import-source files or directories has not been registered in the domain controller. (O) Check for network problems. If there are no network problems, make sure that the user or group set for the import-source files or directories is registered in the domain controller or an account mapping file. If the problem cannot be resolved, revise the CIFS service operation status, authentication mode, and user mapping settings.
KAQM37384-W	A file was updated during archiving.	A file was updated during archiving. (O) No action is necessary.
KAQM37385-E	Migration failed because the data is not synchronized with the HCP data.	There might be a problem with the HCP system or the network, or the data in the home directory of the other site is currently being updated. (O) No action is necessary because the data will be migrated to the HCP the next time a migration is performed.
KAQM37386-E	An attempt to read file system information failed because the ACL type of the home-directory-roaming file systems at the two sites is different. (file system name = <i>file-system-name</i>)	An attempt to read file system information failed because the ACL type of the home-directory-roaming file systems at the two sites is different. (O) Check the ACL type of the home-directory-roaming file system at the other site, and then create the file system again.
KAQM37387-E	The update of the home directory status failed.	The update of the home directory status failed. (O) No action is necessary because the home directory status will be updated the next time an automatic update is performed. For details about the failed home directory, see the KAQM37388-E message output to the Management log file (<i>management.log</i>).
KAQM37388-E	The update of the home directory status failed. (home directory = <i>home-directory-name</i>)	The update of the home directory status failed. (O)

Message ID	Message	Description and Action
		No action is necessary because the home directory status will be updated the next time an automatic update is performed.
KAQM37389-E	A home-directory-roaming file system cannot be specified.	The file system is compatible with the home-directory-roaming functionality. (O) Specify a file system that is not compatible with the directory-roaming functionality, and then retry the operation.
KAQM37390-E	The automatic update of the home-directory-roaming file system failed.	The automatic update of the home-directory-roaming file system failed. (O) Follow the instructions in the KAQM37391-E message output to the HSM Core log (<code>hsmarc.log</code>).
KAQM37391-E	The automatic update of the home-directory-roaming file system failed. (reason = {insufficient memory I/O error no disk space HCP communication error authentication error some other error}, file system name = <i>file-system-name</i> , home directory = { <i>home-directory-name</i> all home directories in the file system})	The automatic update of the home-directory-roaming file system failed. (O) If there is not enough memory, increase the amount of available memory. If there is not enough disk space, increase the size of the file system. If an I/O error occurred, confirm the status of the file system from the list of file systems. If an HCP communication error occurred, confirm the status of the network. If an authentication error occurred, revise the HCP access settings. If the problem persists, acquire all the log files, and contact maintenance personnel.
KAQM37392-E	Migration failed because a conflict occurred between the home-directory-roaming file systems at the two sites. There might have been a delay in synchronizing the home directories between the sites.	A conflict occurred between the home-directory-roaming file systems at the two sites. (O) No action is necessary because the data will be forwarded to the HCP system the next time a migration is performed.
KAQM37393-E	You cannot specify a file system that is not compatible with the home-directory-roaming functionality.	The specified file system is not compatible with the home-directory-roaming functionality. (O) Specify a file system that is compatible with the home-directory-roaming functionality, and then retry the operation.

Message ID	Message	Description and Action
KAQM37394-W	Home directory data on this site cannot be updated because home directory data on the other site is being updated. (file system name = <i>file-system-name</i> , home directory name = <i>home-directory-name</i>)	Home directory data on the other site is being updated. (O) Ask the end-user to wait a while before logging in to the home directory again or attempting to update the data again.
KAQM37395-W	Home directory data cannot be updated because the data must be synchronized with the most recent data on the HCP system. (file system name = <i>file-system-name</i> , home directory name = <i>home-directory-name</i>)	The home directory data is currently being synchronized with the most recent data on the HCP system. (O) Ask the end-user to wait a while before attempting to update the data again.
KAQM37396-E	An HTTP request to the HCP system failed during access to the home directory. (file system name = <i>file-system-name</i> , home directory name = <i>home-directory-name</i>)	HCP communication failed or an HTTP request to the HCP system failed. (O) Check the HSM Core log (<i>hsmarc.log</i>), and follow the instructions in the message that was output before this message.
KAQM37397-W	Processing to delete one or more HCP files was executed because the updating of a system file for the purpose of deleting unsynchronized HCP files failed.	The updating of a system file for the purpose of deleting unsynchronized HCP files failed. (O) No action is necessary.
KAQM37398-E	Configuration of the settings for using the namespace used by the home-directory-roaming functionality failed. (file system name = <i>file-system-name</i>)	Configuration of the settings for using the namespace used by the home-directory-roaming functionality failed. (O) Remount the file system. If a share has been created, delete the share, remount the file system, and then re-create the share. If the problem persists, acquire all the log data, and then contact maintenance personnel.
KAQM37399-E	The option (<i>option-name</i>) cannot be specified for a home-directory-roaming file system.	The specified file system is compatible with the home-directory-roaming functionality. (O) Specify a file system that is not compatible with the home-directory-roaming functionality, and then retry the operation.
KAQM37400-E	Processing was canceled because acquisition of a local data encryption key when the OS started might have failed.	Acquisition of a local data encryption key when the OS started might have failed.

Message ID	Message	Description and Action
		(O) See the system messages to check whether any errors occurred when the OS was started. If an error occurred, recover from the error and then retry the operation.
KAQM37401-E	Home directory data on this site was moved temporarily because the data on the HCP system was updated by another site. (file system name = <i>file-system-name</i> , home directory name = <i>home-directory-name</i>)	A migration was performed for a home-directory-roaming file system on another site, causing the data on the HCP system to be updated. This caused the home directory data on this site to be moved temporarily. (O) The moved data was placed in the .conflict directory under the home directory. Ask the end-user to log in to the home directory again, to check the contents of the .conflict directory (or to wait a while if the .conflict directory does not exist), and then to copy the files as necessary.
KAQM37402-W	Files on the import source might not have been accessible, or the number of objects might have failed to be calculated. Confirm the error, take appropriate action, and then retry the operation.	Files on the import source might not have been accessible, or the number of objects might have failed to be calculated. (O) Confirm the error, take appropriate action, and then retry the operation.
KAQM37404-Q	Are you sure you want to delete the filtering policy? (y/n)	This confirmation message is output before a filtering policy is deleted. (O) Enter y or n.
KAQM37405-E	The specified path is not of a file.	The specified path is not of a file. (O) Revise the path, and then retry the operation.

Message ID	Message	Description and Action
		amount. In other cases, acquire all log files, and then contact maintenance personnel. Also, take actions such as checking the files that were not imported and then manually copying those files one by one.
KAQM37415-W	After a filtering policy is deleted or updated, in order to re-target a file that was outside the scope of the single-instancing, rebuild the task management information.	The filtering policy was deleted or updated. (O) Rebuild the task management information.
KAQM37417-E	A migration to HCP is not set for the specified file system.	A migration to HCP is not set for the specified file system. (O) Set a file system where migration to HCP is specified and then try again, or follow the instructions in Help and enter an appropriate option.
KAQM37418-E	For the specified file system, the unit for assigning namespaces cannot be changed to shares.	For the specified file system, the unit for assigning namespaces cannot be changed to shares. (O) To change the unit for assigning namespaces to shares, specify a file system that can link with HCP in units of shares.
KAQM37419-E	The unit for assigning namespaces on the specified file system cannot be changed to shares, because a share is set for the mount point.	The unit for assigning namespaces on the specified file system cannot be changed to shares, because a share is set for the mount point. (O) To change the unit for assigning namespaces to shares, specify a file system where the share set for the mount point has been canceled.
KAQM37420-E	The namespace type of the specified file system is already set for the subtree.	The namespace type of the specified file system is already set for the subtree. (O) Make sure the specified option and argument are correct, and then try again.
KAQM37421-E	The information on the namespace that is assigned to a share cannot be set, as the HCP information for data access has not been set.	The information on the namespace that is assigned to a share cannot be set, as the HCP information for data access has not been set. (O)

Message ID	Message	Description and Action
		Set the HCP information to migrate the data.
KAQM37423-E	The namespace information cannot be set, because the maximum number of namespaces has been reached.	The maximum number of namespaces that can be created on the system has been reached. (O) Ask your HCP administrator to delete unnecessary namespaces.
KAQM37424-E	The namespace type of the specified file system is not set for the subtree.	The namespace type of the specified file system is not set for the subtree. (O) Set the namespace type for the subtree.
KAQM37425-E	The specified directory does not exist.	The specified directory does not exist. (O) Specify an existing directory.
KAQM37426-E	The namespace type of the file system to be created does not match the namespace type of the referenced file system.	The namespace type of the file system to be created does not match the namespace type of the referenced file system. (O) Create a file system whose namespace type matches that of the referenced file system.
KAQM37427-E	The resource group containing the specified file system (<i>file-system-name</i>) is not running on the node that executed this operation.	The resource group that contains the specified file system is not running on the node that executed this operation. This operation can be executed only on a node on which the resource group containing the specified file system is running. (O) Check the resource group status. If the resource group is running on a different node in the cluster, execute this operation on that node. If the resource group is offline, start the resource group and then execute the operation again.
KAQM37428-E	Do you want to use the data migrated to HCP in units of file systems to restore data to the file system that performs migration in units of shares? (y/n)	This confirmation message is displayed when you try to use the data migrated to HCP in units of file systems to restore data to the file system that performs migration to HCP in units of shares. (O) Enter y or n.

Message ID	Message	Description and Action
KAQM37429-E	A namespace is already set for the specified directory. (namespace = <i>namespace-name-or-FQDN</i>)	A namespace is already set for the specified directory. (O) Specify a directory for which no namespace is set, and then try again.
KAQM37430-E	The specified namespace cannot be set, because it is already assigned to another file system in the system.	The specified namespace is already assigned to another file system in the system. (O) Check which namespaces are assigned to file systems or shares, specify the name of an unassigned namespace, and then try again.
KAQM37431-E	The maximum number of configurable namespaces has been exceeded. (number of namespaces exceeding the maximum = <i>number-of-namespaces-by-which-the-maximum-has-been-exceeded</i>)	An attempt was made to configure more than the maximum number of namespaces that can be created on the system. (O) Ask your HCP administrator to delete unnecessary namespaces.
KAQM37432-E	Shared data cannot be acquired because none exists. (file system name = <i>read-only-file-system-name</i> , directory name = <i>directory-name</i> , FQDN = <i>FQDN-of-the-namespace-associated-with-the-file-system-being-read-from</i>)	A namespace was specified to which data has never been migrated from a file system, and then an attempt was made to acquire shared data. (O) Make sure that the specified FQDN of the namespace is correct. If the FQDN of the namespace is correct, perform a migration from the file system being read from. Then, wait a while or execute the <code>arcrestore</code> command on the read-only file system.
KAQM37433-E	An error occurred during acquisition of shared data. (file system name = <i>read-only-file-system-name</i> , directory name = <i>directory-name</i> , FQDN = <i>FQDN-of-the-namespace-associated-with-the-file-system-being-read-from</i>)	No data to be shared exists on the HCP system. An error might have occurred during a migration from the file system being read from. (O) Make sure that the file system being read from is successfully migrated. Then, wait a while or execute the <code>arcrestore</code> command on the read-only file system.
KAQM37434-E	An error occurred during acquisition of shared data. (file system name = <i>read-only-file-system-name</i> , directory name = <i>directory-name</i>)	There is not enough unused capacity to acquire the data to be shared. (O) Expand the read-only file system. Then, wait a while or execute the <code>arcrestore</code> command on the read-only file system.

Message ID	Message	Description and Action
KAQM37435-E	An insufficient memory error occurred during acquisition of shared data. (file system name = <i>read-only-file-system-name</i> , directory name = <i>directory-name</i>)	Memory allocation failed. (O) Wait a while, and then execute the <code>arcrestore</code> command on the read-only file system. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM37436-E	The connection with the HCP system failed during acquisition of shared data. (file system name = <i>read-only-file-system-name</i> , directory name = <i>directory-name</i> , FQDN = <i>FQDN-of-the-namespace-associated-with-the-file-system-being-read-from</i>)	An error occurred while communicating with the HCP system. The FQDN of the namespace associated with the file system being read from might have been changed. (O) Make sure that the specified FQDN of the namespace is correct and the network status is okay. Then, wait a while or execute the <code>arcrestore</code> command on the read-only file system. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM37437-E	The connection with the HCP system failed during acquisition of shared data. (file system name = <i>read-only-file-system-name</i> , directory name = <i>directory-name</i> , FQDN = <i>FQDN-of-the-namespace-associated-with-the-file-system-being-read-from</i>)	There might be a problem with the HCP system or the network. (O) Check the status of the HCP system and the network, and resolve the problem. Then, wait a while or execute the <code>arcrestore</code> command on the read-only file system. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM37438-E	The connection with the HCP system timed out during acquisition of shared data. (file system name = <i>read-only-file-system-name</i> , directory name = <i>directory-name</i> , FQDN = <i>FQDN-of-the-namespace-associated-with-the-file-system-being-read-from</i>)	There might be a problem with the HCP system or the network. (O) Check the status of the HCP system and the network, and resolve the problem. Then, wait a while or execute the <code>arcrestore</code> command on the read-only file system. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM37439-E	The SSL connection with the HCP system failed during acquisition of shared data. (file system name = <i>read-only-file-system-name</i> , directory name = <i>directory-name</i> , FQDN = <i>FQDN-of-the-namespace-associated-with-the-file-system-being-read-from</i>)	The SSL connection with the HCP system failed. (O) Check the status of the HCP system, the SSL settings, and the network, and resolve the problem. Then, wait a while or execute the <code>arcrestore</code> command on the read-only file system.

Message ID	Message	Description and Action
		If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM37440-E	Authentication failed during acquisition of shared data. (file system name = <i>read-only-file-system-name</i> , directory name = <i>directory-name</i> , FQDN = <i>FQDN-of-the-namespace-associated-with-the-file-system-being-read-from</i>)	The user name, password, FQDN of the namespace, or an HCP SSL setting for the read-only file system is invalid. (O) Revise the input values and settings.
KAQM37441-E	Name resolution of the FQDN failed during acquisition of shared data. (file system name = <i>read-only-file-system-name</i> , directory name = <i>directory-name</i> , FQDN = <i>FQDN-of-the-namespace-associated-with-the-file-system-being-read-from</i>)	Name resolution could not be properly performed. The HCP system could not be temporarily communicated with due to, for example, a network error or a high load on the HCP system. (O) Make sure that name resolution can be performed in the environment. Then, wait a while or execute the <code>arcrestore</code> command on the read-only file system.
KAQM37442-E	The connection with the HCP system ended during acquisition of shared data. (file system name = <i>read-only-file-system-name</i> , directory name = <i>directory-name</i>)	Communication with the HCP system ended due to a resource group being moved or stopped, or a file system being unmounted. (O) If a resource group was moved or stopped, or a file system was unmounted, mount the file system. Then, wait a while or execute the <code>arcrestore</code> command on the read-only file system.
KAQM37443-E	The acquisition of file information failed during acquisition of shared data. (file system name = <i>read-only-file-system-name</i> , directory name = <i>directory-name</i>)	An error occurred during acquisition of file information. An error might have occurred with the file system. (O) In the list of file systems, check the status of the file system. If the file system is in an error status, follow the error recovery procedure provided in online Help. In all other cases, acquire all the log data, and then contact maintenance personnel.
KAQM37444-E	The restoration of a file or directory attribute failed during acquisition of shared data. (file system name = <i>read-only-file-system-name</i> , directory name = <i>directory-name</i> , FQDN = <i>FQDN-of-the-</i>	Possible causes are as follows: During a migration from the file system being read from to the HCP system, an attribute failed to be saved or was changed, or an error occurred in the file system.

Message ID	Message	Description and Action
	<i>namespace-associated-with-the-file-system-being-read-from</i>)	(O) In the list of file systems, check the status of the file system. If the file system is in an error status, follow the error recovery procedure provided in online Help. Then, wait a while or execute the <code>arcrestore</code> command on the read-only file system. If the file system is not in an error status, make sure the file system being read from is migrated. Then, wait a while or execute the <code>arcrestore</code> command on the read-only file system. In all other cases, acquire all the log data, and then contact maintenance personnel.
KAQM37445-W	Shared data cannot be acquired because the file system is mounted as read-only. (file system name = <i>read-only-file-system-name</i> , directory name = <i>directory-name</i>)	The file system is mounted as read-only. (O) To acquire shared data, mount the file system as both readable and writable. Then, wait a while or execute the <code>arcrestore</code> command on the read-only file system.
KAQM37446-E	The data to be shared cannot be restored, because the namespace type of the file system to be restored is not set for the subtree. (file system name = <i>read-only-file-system-name</i> , directory name = <i>directory-name</i>)	The namespace type of the file system to be restored is not set for the subtree. (O) Set the namespace type of the target reference file system for the subtree, and then execute the <code>arcrestore</code> command for that file system.
KAQM37447-E	The directory to which the data to be shared is to be restored does not exist. (file system name = <i>read-only-file-system-name</i> , directory name = <i>directory-name</i>)	The directory to which the data to be shared is to be restored does not exist. (O) Create a directory for the target reference file system, and then execute the <code>arcrestore</code> command for that file system.
KAQM37448-E	Data cannot be restored, because backup information for the specified file system does not exist.	Data cannot be restored, because backup information for the specified file system does not exist. (O) Make sure the name of the file system for which data is to be restored is correct, and then perform restoration again.
KAQM37449-Q	This operation deletes all data under the specified directory. Are you sure you want to delete the data? (y/n)	This message is displayed before all data under the specified directory is deleted. (O)

Message ID	Message	Description and Action
		Enter y or n.
KAQM37450-E	No namespace is assigned to the specified directory.	No namespace is assigned to the specified directory. (O) Make sure the specified option and argument are correct, and then try again.
KAQM37451-E	The directory cannot be deleted, because an NFS share was created.	An NFS share was created under the directory to be deleted. (O) Delete the NFS share and then try again.
KAQM37452-E	The directory cannot be deleted, because a CIFS share was created.	A CIFS share was created under the directory to be deleted. (O) Delete the CIFS share and then try again.
KAQM37453-E	The data cannot be restored, because the specified directory is the system directory.	The system directory was specified. (O) Specify a different directory and then perform restoration again.
KAQM37454-E	Updating of some files or directories failed. (reason = {insufficient memory an I/O error no disk space an HCP communication error an authentication error a device or resource is in use some other error}, file system name = <i>file-system-name</i> , directory name = <i>directory-name</i>)	Updating of some files or directories failed due to the cause explained in the reason. (O) If there is not enough memory, increase the amount of available memory. If there is not enough disk space, increase the size of the file system. If an I/O error occurred, confirm the status of the file system from the list of file systems. If an HCP communication error occurred, confirm the status of the network. If an authentication error occurred, revise the HCP access settings. If the device or resource is in use, confirm that no shares have been created under the directory. If such shares exist, delete them. Take action according to the error details, and then execute the <code>arcrestore</code> command. If the problem persists, acquire all the log files, and contact maintenance personnel.
KAQM37455-E	Automatic updating of the data-referencing file system failed. (reason = {insufficient memory I/O error no disk space HCP communication error authentication error	Automatic updating of the data-referencing file system failed. Message ID	Message	Description and Action
	some other error}, file system name = <i>file-system-name</i> , directory name = <i>directory-name</i>)	memory. If there is not enough disk space, increase the size of the file system. If an I/O error occurred, confirm the status of the file system from the list of file systems. If an HCP communication error occurred, confirm the status of the network. If an authentication error occurred, revise the HCP access settings. For all other errors, execute the <code>arcstore</code> command. If the problem persists, acquire all the log files, and contact maintenance personnel.
KAQM37456-I	Restoration of a data-referencing file system started. (file system name = <i>file-system-name</i> , directory name = <i>directory-name</i>)	Restoration of a data-referencing file system started. (O) No action is necessary.
KAQM37457-I	Restoration of a data-referencing file system ended. (file system name = <i>file-system-name</i> , directory name = <i>directory-name</i>)	Restoration of a data-referencing file system ended. (O) No action is necessary.
KAQM37458-E	Restoration of a data-referencing file system failed. (reason = {insufficient memory no disk space HCP communication error authentication error some other error}, file system name = <i>file-system-name</i> , directory name = <i>directory-name</i>)	Restoration of a data-referencing file system failed. (O) Identify the cause of the problem by looking at the message that was output before this message, and then take appropriate action.
KAQM37459-W	Shared data could not be acquired. (file system name = <i>file-system-name</i> , directory name = <i>directory-name</i>)	Shared data could not be acquired because it was not migrated to the HCP system or migration of the shared data failed. (O) Wait until a migration is executed for the file system containing the shared data, or ask the system administrator managing the shared data to perform a migration as soon as possible.
KAQM37460-W	File consistency could not be verified for some directories. File consistency for these directories must be verified again.	Information about HCP data could not be obtained. (O) See the HSM Core log (<code>hsmarc.log</code>). If the message KAQM37461-E was output, identify the namespace of the target HCP from the message. For details about how to handle HCP data, see the manual for HCP. Remove the cause of the failure in accordance with

Message ID	Message	Description and Action
		the messages output before the message KAQM37461-E.
KAQM37461-E	Verification of file consistency failed. (file system = <i>file-system-name</i> , directory = <i>directory-name</i> , namespace = <i>namespace-name</i>)	Verification of file consistency failed. (O) See the HSM Core log (<i>hsmarc.log</i>), and then remove the cause of the failure in accordance with the messages output before this message.
KAQM37462-E	You cannot specify a WORM file system.	The specified file system is a WORM file system. (O) You cannot delete data from a directory on a WORM file system. Check and, if necessary, revise the specified file system.
KAQM37463-W	The path of a file or directory contains a newline character. Therefore, the path or directory will not be the target of a task or autocommit.	The path of the file or directory contains a newline character. (O) Check the HSM Core log (<i>hsmarc.log</i>) and identify the files or directories whose paths contain newline characters, and then delete the newline characters. If the migration, file moving, or single instancing functionality is used, execute the <i>arccorrection</i> command.
KAQM37464-W	The path of a file or directory contains a newline character. Therefore, the path or directory will not be the target of a task or autocommit. (path = <i>path</i>)	The path of the file or directory contains a newline character. (O) Delete the newline characters. If the migration, file moving, or single instancing functionality is used, execute the <i>arccorrection</i> command.
KAQM37465-Q	Data deleted by using this operation cannot be restored. Do you want to continue? (y/n)	This message is displayed before all data under the specified directory is deleted. (O) Enter y or n.
KAQM37466-E	The directory cannot be deleted because a subtree quota has been set.	The directory cannot be deleted because a subtree quota has been set. (O) Remove the subtree quota, and then retry the operation.
KAQM37467-E	The directory cannot be deleted because an import from another file server is in progress.	The directory cannot be deleted because an import from another file server is in progress. (O)

Message ID	Message	Description and Action
		Delete the import definition information, and then retry the operation.
KAQM37468-E	An update of a system file failed.	An update of a system file failed. (O) In the list of file systems, check the status of the file systems. If a file system has an error, follow the error recovery procedure provided in the online Help, and then try executing the task again. If a file system has insufficient unused capacity, free up the necessary amount, and then try executing the task again. In other cases, acquire all log files, and then contact maintenance personnel.
KAQM37469-I	The operation to make the past-version directories visible within the file share started. (resource group name = <i>resource-group-name</i>)	The operation to make the past-version directories visible within the file share started. (O) No action is required.
KAQM37470-I	The operation to make the past-version directories visible within the file share finished. (resource group name = <i>resource-group-name</i>)	The operation to make the past-version directories visible within the file share finished. (O) No action is required.
KAQM37471-E	The operation to make the past-version directories visible within the file share failed. (resource group name = <i>resource-group-name</i>)	The operation to make the past-version directories visible within the file share failed. (O) See the File Services Manager log file (<i>management.log</i>). If the KAQM37208-E message was output, take action according to the message. If you try the failed operation again, identify the shared path from the message to re-create the share, or restart the resource groups. If no message was output, acquire all log data, and then contact maintenance personnel.
KAQM37472-I	The operation to make the past-version directories visible within the file share started.	The operation to make the past-version directories visible within the file share started. (O) No action is required.
KAQM37473-I	The operation to make the past-version directories visible within the file share finished.	The operation to make the past-version directories visible within the file share finished. (O)

Message ID	Message	Description and Action
		No action is required.
KAQM37474-E	The operation to make the past-version directories visible within the file share failed.	The operation to make the past-version directories visible within the file share failed. (O) See the File Services Manager log file (<code>management.log</code>). If the KAQM37208-E message was output, take action according to the message. If you try the failed operation again, identify the shared path from the message to re-create the file share, or restart the resource groups or virtual servers. If no message was output, acquire all log data, and then contact maintenance personnel.
KAQM37475-E	The test connection to the rwcs-system namespace failed.	The test connection to the rwcs-system namespace failed. (O) Take the appropriate action based on the message that is output after this message.
KAQM37476-E	You cannot specify a read-write-content-sharing file system.	The read-write-content-sharing functionality is enabled for the specified file system. (O) Specify a file system for which the read-write-content-sharing functionality is not enabled, and then try the operation again.
KAQM37477-W	A read-write-content-sharing file system exists. Turn on the power for this node in the time frame before the storage period ends and before pruning of the data in the rwcs-system namespace starts. If you do not turn on the power in this time frame, all of the data on the file system will be restored from the HCP system and, as a result, access performance for end users might be degraded. (number of days in the storage period until pruning is performed = <i>number-of-days-in-the-storage-period-until-pruning-is-performed</i>)	A read-write-content-sharing file system exists. (O) Turn on the power for this node in the time frame before the storage period ends and before pruning of the data in the rwcs-system namespace starts.
KAQM37478-W	The number of days in the storage period until the data in the rwcs-system	The number of days in the storage period until the data in the rwcs-

Message ID	Message	Description and Action
	namespace is pruned could not be confirmed. If a read-write-content-sharing file system exists, check with the HCP administrator regarding the number of days in the storage period until pruning is performed, and make sure to turn on the power for this node in the time frame before the storage period ends and before pruning of the data in the rwcs-system namespace starts. If you do not turn on the power in this time frame, all of the data on the file system will be restored from the HCP system and, as a result, access performance for end users might be degraded.	system namespace is pruned could not be confirmed. (O) Check whether a read-write-content-sharing file system exists. If such a file system exists, check with the HCP administrator regarding the number of days in the storage period until the data in the rwcs-system namespace is pruned, and make sure to turn on the power for this node before the end of the storage period. If no such file system exists, no action is necessary.
KAQM37479-E	You cannot specify a file system for which the read-write-content-sharing functionality is not enabled.	The read-write-content-sharing functionality is not enabled for the specified file system. (O) Specify a read-write-content-sharing file system, and then try the operation again.
KAQM37481-E	The read-write-content-sharing functionality cannot be used because the ACL type of the read-write-content-sharing file system differs between sites. (file system name = <i>file-system-name</i>)	The read-write-content-sharing functionality cannot be used because the ACL type of the read-write-content-sharing file system differs between sites. (O) Check the ACL types of the read-write-content-sharing file system at the other sites, and then create the file system again.
KAQM37482-E	An attempt to expand the namespace failed. (FQDN = <i>FQDN</i>)	An attempt to expand the namespace failed. (O) Ask the HCP administrator to expand the tenant capacity.
KAQM37483-E	The option (<i>option-name</i>) cannot be specified for a file system for which the read-write-content-sharing functionality is enabled.	The read-write-content-sharing functionality is enabled for the specified file system. (O) Specify a file system for which the read-write-content-sharing functionality is not enabled, and then try the operation again.

Message ID	Message	Description and Action
KAQM37484-W	Acquisition of a lock for directory operations among the sites failed. (path = <i>path</i>)	Acquisition of a lock for directory operations among the sites failed. (O) No action is necessary.
KAQM37486-E	The processing to update the read-write-content-sharing file system failed. (reason = {insufficient memory I/O error no disk space HCP communication error authentication error some other error}, file system name = <i>file-system-name</i>)	The processing to update the read-write-content-sharing file system failed. (O) If an error occurred in the communication with the HCP system, check the status of the network. If an authentication error occurred, check and, if necessary, revise the access settings on the HCP system. If an error occurred other than those previously mentioned, take the following actions, and then restart the resource group: - If there is not enough memory, increase the amount of available memory. - If there is not enough disk capacity, increase the amount of free space on the file system. - If an I/O error occurred, check the status of the file system in the list of file systems. - If the problem persists, acquire all log files, and then contact maintenance personnel.
KAQM37487-I	The processing to update the read-write-content-sharing file system started.	The processing to update the read-write-content-sharing file system started. (O) No action is necessary.
KAQM37488-I	The processing to update the read-write-content-sharing file system ended.	The processing to update the read-write-content-sharing file system ended. (O) No action is necessary.
KAQM37489-I	The processing to update the read-write-content-sharing file system was skipped.	The read-write-content-sharing file system has already been updated. (O) No action is necessary.
KAQM37490-E	The processing to update the read-write-content-sharing file system failed.	The processing was terminated, because an error occurred during the update of the read-write-content-sharing file system. (O)

Message ID	Message	Description and Action
		Identify the cause of the problem by looking at the message that was output before this message, and then take appropriate action.
KAQM37491-I	The processing to restore the file system started. (file system name = <i>file-system-name</i>)	The processing to restore the file system started. (O) No action is necessary.
KAQM37492-I	The processing to restore the file system ended. (file system name = <i>file-system-name</i>)	The processing to restore the file system ended. (O) No action is necessary.
KAQM37493-E	The processing to restore the file system failed. (reason = {insufficient memory no disk space HCP communication error authentication error some other error}, file system name = <i>file-system-name</i>)	The processing to restore the file system failed. (O) Identify the cause of the problem by looking at the message that was output before this message, and then take appropriate action.
KAQM37494-E	The specified amount of reserved space has exceeded the maximum.	The specified amount of reserved space has exceeded the maximum. (O) Confirm the specified amount of reserved space, and then try the operation again. For details about the maximum reserved space, see the <i>CLI Administrator's Guide</i> .
KAQM37495-W	There is not enough free space in the file system where the reserved space was set.	There is not enough free space in the file system where the reserved space was set. (O) Make sure there is enough free space on the file system on which the reserved space will be set.
KAQM37496-E	Failed to specify the reserved space or the data acquisition failed. (reason = {insufficient memory an I/O error no disk space some other error})	An attempt to reservation capacity on the file system setting or acquisition failed. (O) If the reason for the error is insufficient memory, wait until the load on the system decreases, and then retry the operation. If the reason is insufficient disk space, expand the file system, and then retry the operation. In all other cases, acquire all the log data, and then contact maintenance personnel.

Message ID	Message	Description and Action
KAQM37497-W	Data in the .conflict directory can still be changed or deleted. (path = <i>path-to-the-data</i>)	An attempt was made to specify that data in the .conflict directory cannot be changed or deleted, but the attempt failed. (O) Data in the .conflict directory has not been migrated. Ask the end-users to be careful not to change or delete necessary data.
KAQM37498-E	A namespace quota has been specified for a directory for which a subtree namespace has not been set.	Failed to specify the namespace quota. (O) Set a subtree namespace, and then try the operation again.
KAQM37499-I	The namespace quota for the subtree of the specified file system was enabled.	The namespace quota for the subtree of the specified file system was enabled. (O) Disable the namespace quota as necessary.
KAQM37500-E	Failed to specify the namespace quota. (Details: message ID = <i>message-ID</i> , file system name = <i>file-system-name</i>)	Failed to specify the namespace quota. (O) See the details of the message ID that is output, and then take the necessary action.
KAQM37501-W	The reserved space specified for the file system is less than the space required for migration or stub processing. As a result, the next migration or stub processing might fail. (file system = <i>file-system-name</i> , required reserved space = <i>space</i>)	The reserved space specified for the file system is less than the space required for migration or stub processing. (O) Specify a reserved space for the file system that is greater than the space required for migration or stub processing.
KAQM37502-E	The target file system was mounted without the Quota function being specified.	The operation is not possible because the target file system was mounted without the Quota function being specified. (O) If you are using the GUI, the most recent information about the file system might not be displayed. Execute refresh processing, specify the Quota function, mount the target file system, and then retry the operation. If you are using a command, specify the Quota function in the mount options, and then re-execute the command.

Message ID	Message	Description and Action
KAQM37503-E	The total number of file shares linked to the HCP system exceeds the maximum value.	The number of file shares linked to the HCP system exceeds the maximum value that can be set per file system. (O) Delete any unnecessary file shares linked to the HCP system.
KAQM37504-E	The file system is full.	The file system is full. (O) Reduce the capacity used by the file system.
KAQM37505-W	There is not enough free space in the file share on which the namespace quota was set. (file system name = <i>file-system-name</i> , directory name = <i>directory-name</i>)	There is not enough free space in the file share on which the namespace quota was set. (O) Make sure there is enough free space in the file share. For details about how to reserve free space in a file share, see the <i>Installation and Configuration Guide</i> .
KAQM37506-W	The file was moved to the .conflict directory, because it conflicted with the files migrated from another site. (file path = <i>file-path</i>)	The file was moved to the .conflict directory, because it conflicted with the files migrated from another site. (O) No action is necessary.
KAQM37507-E	The processing to update the read-write-content-sharing file system failed.	Migration was terminated, because an error occurred during the update of the read-write-content-sharing file system. (O) Use the HSM core log (<i>hsmarc.log</i>) to locate the cause of the failure, and take appropriate action.
KAQM37508-E	An attempt to read the file system information failed, because the ACL type of the read-write-content-sharing file system is different at the other sites. (file system name = <i>file-system-name</i>)	An attempt to read the file system information failed, because the ACL type of the read-write-content-sharing file system is different at the other sites. (O) Check the ACL types of the read-write-content-sharing file system at the other sites, and then create the file system again.
KAQM37509-E	An inconsistency exists in the data on the read-write-content-sharing file system. (file system name = <i>file-system-name</i>)	The processing of the read-write-content-sharing functionality was terminated due to a failure. (O) Use the HSM core log (<i>hsmarc.log</i>) to locate the cause of the failure, and

Message ID	Message	Description and Action
		take appropriate action. Then restart the resource group.
KAQM37510-E	Data updated in the read-write-content-sharing file system could not be applied to the HCP system. (file system = <i>file-system-name</i>)	An attempt to reflect updated data into the HCP system failed because of an error. (O) Use the HSM core log (<i>hsmarc.log</i>) to locate the cause of the failure, and take appropriate action. Then, wait awhile. Migration will start and the updated data will be reflected into the HCP system.
KAQM37511-E	An end-user's directory operation in a read-write-content-sharing file system failed. (file system = <i>file-system-name</i>)	Processing of the read-write-content-sharing functionality failed because of an error. (O) Use the HSM core log (<i>hsmarc.log</i>) to locate the cause of the failure, and take appropriate action. Then, inform the end-users that the problem has been fixed.
KAQM37512-E	An end-user's directory operation in a read-write-content-sharing file system failed, and data integrity was lost. (file system = <i>file-system-name</i>)	Processing of the read-write-content-sharing functionality failed because of an error. (O) Use the HSM core log (<i>hsmarc.log</i>) to locate the cause of the failure, take appropriate action, and then restart the resource group. Then, inform the end-users that the problem has been fixed.
KAQM37513-E	Migration failed because an exclusive lock between sites failed. (path = <i>path</i>)	Migration failed because an exclusive lock between sites failed. (O) No action is necessary because the data will be migrated to the HCP the next time a migration is performed.
KAQM37514-E	An end-user's file access to the read-write-content-sharing file system failed, and data integrity was lost. (file system = <i>file-system-name</i>)	Processing of the read-write-content-sharing functionality failed because of an error. (O) Use the HSM core log (<i>hsmarc.log</i>) to locate the cause of the failure, take appropriate action, and then restart the resource group. Then, inform the end-users that the problem has been fixed.
KAQM37515-E	The process cannot be executed because the common key used for	The common key used for encrypting data stored in HCP was not recovered.

Message ID	Message	Description and Action
	encrypting data stored in HCP was not recovered.	(O) Recover the common key used for encrypting data stored in HCP.
KAQM37516-E	An import from another file server failed. (path = <i>path</i>)	An import from another file server failed. (O) Restart the resource group or the virtual server, or manually copy the data from the import-source server. Then, try the import again from another file server. If an error occurs again, acquire all the log data, and then contact maintenance personnel.
KAQM37517-E	An import from another file server failed.	An import from another file server failed. (O) Restart the resource group or the virtual server, or manually copy the data from the import-source server. Then, try the import again from another file server. If an error occurs again, acquire all the log data, and then contact maintenance personnel.
KAQM37524-E	Failed to access a system file.	A problem might exist in the processing of an OS disk or a system file. (O) Try the operation again. If the error occurs again, collect all log data, and then contact maintenance personnel.
KAQM37525-E	Acquisition of the data of files that are resident in the cache is disabled.	Acquisition of the data of files that are resident in the cache is disabled. (O) Enable acquisition of the data of files that are resident in the cache, and then execute the command again.
KAQM37526-E	Failed to create the home directory because a connection to HCP could not be established. (user name = <i>user-name</i> , file system name = <i>file-system-name</i>)	Failed to create the home directory because a connection to HCP could not be established. (O) Refer to the content of the error message beginning with KAQM37 that was output before this message, and then take action.
KAQM37527-I	Usage: <i>command-syntax</i>	This message displays the format of the command. (O)

Message ID	Message	Description and Action
		If a syntax error occurs, check the format of the command, and then retry.
KAQM37528-E	An I/O error occurred.	An error might have occurred on the file system, or there might be a problem in internal processing. (O) In the list of file systems, check the status of the file system. If the file system has an error status, follow the error recovery procedure provided in online Help. If none of the statuses indicate a problem, and you cannot identify the cause of the problem, acquire all the log data, and then contact maintenance personnel.
KAQM37529-E	The home directory was updated from multiple sites simultaneously. (file system name = <i>file-system-name</i> , home directory name = <i>home-directory-name</i>)	The home directory was updated from multiple sites simultaneously. (O) Restore the data of the relevant home directory. For details about how to restore the data of a home directory, see the <i>Installation and Configuration Guide</i> .
KAQM37530-E	Because the data synchronization processing was canceled, information about file shares has not been restored. (file system name = <i>file-system-name</i>)	The data synchronization processing was canceled. (O) Execute the <code>arcrestore</code> command.
KAQM37531-E	Because the data synchronization processing was canceled, information about file shares has not been restored. (file system name = <i>file-system-name</i> , directory name = <i>directory-name</i>)	The data synchronization processing was canceled. (O) Execute the <code>arcrestore</code> command.
KAQM37532-W	An attempt to restore some of the file shares failed, but processing continued. (file system = <i>file-system-name</i>)	An attempt to restore file shares failed. (O) Check the file shares, and then, if necessary, create the file shares manually.
KAQM37533-W	An attempt to restore some of the file shares failed, but processing continued. (file system = <i>file-system-name</i> , directory = <i>directory-name</i>)	An attempt to restore file shares failed. (O) Check the file shares, and then, if necessary, create the file shares manually.

(reason = {insufficient memory an I/O error no disk space a lock failure some other error})	<p>The home directory could not be deleted because of the reason indicated in the message.</p> <p>(O)</p> <p>If the directory is currently being accessed by a client, request that access from the client stop. If the directory is not being accessed by any clients, confirm the status of the file system from the list of file systems. If the file system has an error status, follow the error recovery procedure provided in online Help. If the reason is insufficient memory or a lock failure, wait a while, and then retry the operation. If the reason is insufficient disk space, expand the file system, and then try again. In other cases, acquire all the log data, and then contact maintenance personnel.</p>
KAQM37537-W	The number of end users who use a file system for which the home-directory-roaming functionality is enabled exceeded the maximum. (file system name = <i>file-system-name</i>)	<p>The number of end users who use a file system for which the home-directory-roaming functionality is enabled exceeded the maximum.</p> <p>(O)</p> <p>Check the system configuration and make sure that the number of end users who use a file system for which the home-directory-roaming functionality is enabled does not exceed the maximum.</p>

Message ID	Message	Description and Action
KAQM37538-Q	To change the method of selecting a past-version directory to be retained for using the custom schedule, you need to stop or cancel the migration task in advance. Do you want to run the processing? (y/n)	This message is output before you attempt to change the method of selecting a past-version directory to be retained for using the custom schedule. (O) Enter y or n.
KAQM37539-I	The method was changed for selecting a past-version directory to be retained for using the custom schedule. Revise the settings for the custom schedule as needed.	The method has been changed for selecting a past-version directory to be retained for using the custom schedule. (O) Revise the settings for the custom schedule as needed.
KAQM37540-W	Restoration of the settings has failed for the method of selecting a past-version directory to be retained for using the custom schedule.	Restoration of the settings has failed for the method of selecting a past-version directory to be retained for using the custom schedule. (O) Check the current method of selecting a past-version directory to be retained for using the custom schedule and reset the method of selecting a past-version directory, as needed.
KAQM37546-E	The file or directory could not be imported, because the length of the import-target file path exceeds the upper limit of the system. (host name = <i>Import-source-host-name</i> , share name or share path = <i>Import-source-share-name-or-share-path</i> , file or directory path = <i>Import-source-file-or-directory-path</i>)	The length of the import-target file path exceeds the upper limit of the system. (O) Manually copy the file or directory from the import-source server.
KAQM37547-E	The file or directory could not be imported, because the length of the import-target file path exceeds the upper limit of the system.	The length of the import-target file path exceeds the upper limit of the system. (O) Check the HSM Core log (<i>hsmarc.log</i>). If the KAQM37546-E message was output, based on the message, identify the path of the file or directory on the import-source server, and then manually copy the file or directory from the import-source server.
KAQM37553-E	The directory operation failed because the number of groups to which a user belongs	The number of groups to which a user belongs exceeds the upper limit. (O)

Message ID	Message	Description and Action
	exceeds the upper limit. (user ID = <i>user-ID</i>)	Ask the system administrator or domain administrator to set the number of groups to which the user belongs to no more than 700 including the primary group.
KAQM37554-E	A file was moved to the <code>.conflict_longpath</code> directory, because it conflicted with the files migrated from another site. (file path = <i>file-path</i> , destination path = <i>destination-path</i>)	The file that was in conflict with files migrated from another site was moved to the <code>.conflict_longpath</code> directory, because the path of the file was too long or contained characters that were not in UTF-8 encoding. (O) If necessary, ask a CIFS administrator or a root user who is not mapped anonymously (NFS client) to copy the file that was moved to the <code>.conflict_longpath</code> directory to a directory accessible by the end user. Then ask the end user to restore the file that caused the conflict. Check the output file path, and make sure it is in a character encoding supported by the client.
KAQM37555-E	A file was moved to the <code>.conflict_longpath</code> directory, because it conflicted with the files migrated from another site. (file system name = <i>file-system-name</i>)	The file that was in conflict with files migrated from another site was moved to the <code>.conflict_longpath</code> directory, because the path of the file was too long or contained characters that were not in UTF-8 encoding. (O) Follow the instructions in the KAQM37554-E message output to the HSM Core log (<code>hsmarc.log</code>).
KAQM37556-W	The file was saved under a different name because it conflicted with a file migrated from another site. (file path = <i>file-path</i>)	The file was saved under a different name because it conflicted with a file migrated from another site. (O) No action is required.
KAQM37701-E	The specified task is currently being executed. (task name = <i>task-name</i>)	Migration was not performed, because the specified task is currently being executed. (O) Wait until task execution is complete, and then perform migration again.
KAQM37702-E	The migration task settings could not be set. (file system name = <i>file-system-name</i> , reason = {insufficient memory an I/O error no disk space some other error})	The migration task settings could not be set. (O) In the list of file systems, check the status of the file system. If the file system has an error status, follow the error recovery procedure provided in

Message ID	Message	Description and Action
		online Help. If memory is insufficient, wait for a while, and then set the migration task settings. If disk space is insufficient, expand the file system, and then set the migration task settings. In other cases, acquire all the log data, and then contact maintenance personnel.
KAQM37703-I	The migration task settings were reset to their default values. Make sure there are no problems in the migration task settings. (file system name = <i>file-system-name</i>)	The migration task settings were reset to their default values. (O) Make sure there are no problems in the migration task settings. If there is a problem, change the migration task settings.
KAQM37704-W	The migration task settings were reset to their default values. The task has been disabled. If there are no problems in the migration task settings, enable the task. (file system name = <i>file-system-name</i>)	The migration task settings were reset to their default values. The task has been disabled. (O) Check the migration task settings. If there are no problems, enable the task. If there is a problem, change the migration task settings before enabling the task.
KAQM37705-I	Migration terminated. (<i>maintenance-information</i>)	Migration terminated. (O) No action is necessary.
KAQM37706-W	Migration was interrupted. (<i>maintenance-information</i> , interrupted, discontinued)	Migration was interrupted. (O) Check and, if necessary, revise the task execution time or priority level.
KAQM37707-E	An option is invalid.	The type, number, or order of specified options is invalid. (O) After checking the command format, specify the correct options, and then re-execute the command.
KAQM37708-E	There are too many or too few parameters.	The number of specified parameters is invalid. (O) After checking the command format, specify the correct parameters, and then re-execute the command.
KAQM37709-E	The value of the (<i>option-name</i>) parameter is invalid.	The format of the specified parameter (such as a character string or numeric value) is invalid. (O)

Message ID	Message	Description and Action
		After checking the command format, specify the correct parameter value, and then re-execute the command.
KAQM37710-E	An attempt to allocate memory has failed.	Sufficient memory could not be allocated during command execution. This caused processing to terminate. (O) Wait a while, and then retry the operation. If the error occurs again, acquire all the log data, and then contact maintenance personnel.
KAQM37711-E	The specified file system does not exist.	Processing cannot be executed because the specified file system does not exist in the system. (O) Specify a correct file system name, and then retry.
KAQM37712-E	The specified device file does not exist.	The specified device file does not exist. (O) Verify the specified device file name, and then retry the operation.
KAQM37713-E	The specified device file is being used.	The specified device file is being used for another purpose. (O) Check the specified device file name, and then retry.
KAQM37714-E	The Active File Migration function is being used for another operation in the specified file system. (file system name = <i>file-system-name</i>)	The Active File Migration function is being used for another operation in the specified file system. (O) Wait a while and then retry.
KAQM37715-E	The size of one of the specified device files is smaller than the required size. Alternatively, the total size of the specified device files is too small for the device files to be used as a work space.	The size of one of the specified device files is smaller than the required size. Alternatively, the total size of the specified device files is too small for the device files to be used as a work space. (O) Specify device files so that the conditions are met, and then try again.
KAQM37716-E	The size of the specified device file is too small for the device to be used as a work space.	The size of the specified device file is too small for the device to be used as a work space. (O) Specify device files so that the conditions are met, and then try again.

Message ID	Message	Description and Action
KAQM37717-E	An error occurred during the processing to configure, extend, or release the work space. Only the processing to recover the work space can be executed.	An error occurred during the processing to configure, extend, or release the work space. Only the processing to recover the work space can be executed. (O) Specify the file system in which the error occurred, and then execute the processing to recover the work space. If the error persists, collect all log files, and then contact maintenance personnel. For a list of log files, see the Help.
KAQM37718-E	The work space capacity is insufficient.	The work space capacity is insufficient. (O) Perform the recovery procedure for work space related failures as described in the Help.
KAQM37719-E	The maximum number of work spaces that can be created on the node has been reached.	The maximum number of work spaces that can be created on the node has been reached. (O) Release work spaces that are no longer needed, and then try again.
KAQM37720-E	The maximum number of logical volumes has been reached.	The maximum number of logical volumes has been reached. (O) Delete any unnecessary file systems or release any unnecessary work spaces that are no longer needed, and then try again.
KAQM37721-E	The specified file system cannot be operated by using the Active File Migration function.	The specified file system cannot be operated by using the Active File Migration function. (O) Specify a correct file system name, and then retry.
KAQM37722-E	The specified file system was not created by using a volume manager.	The specified file system was not created by using a volume manager. (O) Specify a correct file system name, and then retry.
KAQM37723-E	Failed to connect to or disconnect from the device file.	An error occurred in accessing the device file. (O) Execute the <code>fpstatus</code> command on both nodes, check the connection statuses of the specified device files on

Message ID	Message	Description and Action
		both nodes, and then retry the operation. If you are using local data encryption, check the system messages on both nodes to see whether the KAQM05256-E message, or a message ranging from KAQM05258-E to KAQM05264-E was output during OS startup. If an error occurred, take action as described in the error message, and then retry the operation. If this error occurs again, follow the recovery procedure in online Help for when a device file access error occurs.
KAQM37724-E	Execution of the command failed, because migration is currently being performed in the specified file system.	Migration is currently being performed in the specified file system. (O) Wait until migration is complete, and then execute the command again.
KAQM37725-E	The total size of the specified device files is too large.	The total size of the specified device file is too large. (O) Specify the correct size of the device file, and then re-execute the command.
KAQM37726-E	An error was detected while accessing the device file. (device file name = <i>device-file-name</i>)	An error was detected while accessing the device file. (O) Follow the recovery procedure written in the online help for when an access error occurs in a device file.
KAQM37727-E	Some of the resources to be used for the requested processing are being used by another user.	Some of the resources to be used for processing are being used exclusively by another user, or the node being used exclusively has stopped. (O) Wait a while, and then re-execute. If the node stops during processing, wait about 15 minutes or boot the stopped node.
KAQM37728-E	An error occurred in the cluster management LU, or access to the cluster management LU is being suppressed because a resource group was forcibly failed over.	An error occurred due to one of the following: - A failure occurred on the cluster management LU. - The cluster management LU is blocked. - The cluster management LU cannot be accessed because a resource group has been forcibly failed over. (O) Contact maintenance personnel.

Message ID	Message	Description and Action
KAQM37729-E	File system processing is being performed, or an error has occurred.	On the specified file system, processing to configure or release the work space is being executed, or the processing that was being executed was interrupted. (O) If the work space is being configured or released, wait until the processing is complete, and then try again. If the work space is not being configured or released, release the work space. If an error occurs, collect all log files, and then contact maintenance personnel.
KAQM37730-E	An error occurred in the file system or work space.	An error occurred in the file system or work space. This message might also be output when the cluster, nodes, or resource groups are not running normally. (O) Check the cluster, node, and resource group statuses. If the statuses are normal and you still cannot identify the cause of the problem, follow the recovery procedure written in the online help for when an access error occurs in a device file.
KAQM37731-E	A cluster, node, or resource group is not running normally.	A cluster, node, or resource group is not running normally. (O) Check the statuses of the cluster, nodes, and resource groups.
KAQM37732-E	Adding the specified LU will cause the size of the work space to exceed the maximum allowable size.	Adding the specified LU will cause the size of the work space to exceed the maximum allowable size. (O) Specify the correct size of the device file, and then re-execute.
KAQM37733-E	Adding the specified device file will cause the size of the work space to exceed the maximum allowable size.	Adding the specified device file will cause the size of the work space to exceed the maximum allowable size. (O) Check the number of device files, and then retry.
KAQM37734-E	The specified device file is not in the same storage system as the device files that make up the file system.	The specified device file is not in the same storage system as the device files that make up the file system. (O)

Message ID	Message	Description and Action
		Specify a device file that is in the same storage system as the device files that make up the file system, and then retry the operation.
KAQM37735-E	The command cannot be used because a cluster configuration is not defined.	The command was executed before a cluster was built. (O) Build a cluster, and then retry the operation.
KAQM37736-E	The specified size exceeds the free capacity of the user disk.	The specified size exceeds the free capacity of the user disk. (O) Check the free capacity of the user disk, and then try again.
KAQM37737-E	The file system is blocked. (file system name = <i>file-system-name</i>)	The file system is blocked. (O) Follow the recovery procedure in online Help that explains what to do when a file system is blocked.
KAQM37738-E	The operation cannot be performed because release of unused area processing is currently executing.	The processing to release the unused area of virtual LUs is being performed on the specified file system. (O) Confirm that the processing to release the unused area of virtual LUs is complete, and then retry the operation. If the error occurs again, acquire all the log files, and then contact maintenance personnel.
KAQM37739-E	The work space could not be set up, because the specified file system is too large.	The work space could not be set up, because the specified file system is too large. (O) Verify the file system size, and then retry the operation.
KAQM37740-E	A system error occurred. (function = <i>function-name</i> , return value = <i>return-value</i>)	A system error occurred. (O) Acquire all the log files, and then contact maintenance personnel. For a list of the file snapshot functionality log files, see online Help.
KAQM37741-E	The total of the following exceeds the maximum: the number of device files used in the file system, and the number of specified device files.	The total of the following exceeds the maximum: the number of device files used in the file system, and the number of specified device files. (O) Check the number of device files in the file system and the specified number

Message ID	Message	Description and Action
		of device files, and then try again. For details on the maximum number of device files that make up the file system, see Help.
KAQM37742-E	If the specified device files are added, the sum of the number of device files used by the file system and the number of device files that make up the work space will exceed the maximum allowable number.	If the specified device files are added, the sum of the number of device files used by the file system and the number of device files that make up the work space will exceed the maximum allowable number. (O) Check the following values, and then try the operation again: the number of device files used by the file system, the number of device files that make up the work space, and the number of the specified device files. For information on the maximum number of device files that can make up a file system, see the online Help.
KAQM37743-E	The operation on the file system cannot be executed because a failover occurred.	The operation on the file system cannot be executed because a failover occurred. (O) Perform failback to bring the system back to the normal state, and then retry.
KAQM37744-E	During processing, the status of a cluster, node, or resource group changed.	The cluster, nodes, or resource groups are not running normally. (O) Check the cluster, node, and resource group status. If the statuses are normal and you still cannot identify the cause of the problem, acquire all the log data, and then contact maintenance personnel.
KAQM37745-E	An attempt to read or write management information failed.	Shared LU or OS disk is broken. (O) Confirm that the system LU settings are correct and that there are no problems, and then retry execution. Acquire all the Management log files if the error occurs again, and then inform maintenance personnel.
KAQM37746-E	The specified task does not exist. (task = <i>task-name</i>)	The specified task does not exist. (O) Specify a task that exists.
KAQM37747-E	The specified Run ID does not exist. (Run ID = <i>run-id</i>)	The specified Run ID does not exist. (O)

Message ID	Message	Description and Action
		Specify a Run ID that exists.
KAQM37748-E	Task information cannot be displayed correctly, because the processing to update the migration progress information failed. When this error is output, the migration task sometimes does not end. (reason = {insufficient memory an I/O error no disk space some other error}, file system name = <i>file-system-name</i>)	Due to the indicated reason, the processing to update the migration progress information failed. (O) Check the status of the file system in the list of file systems. If an error has occurred in the file system, perform the error recovery procedure described in the online Help. If there is insufficient memory, wait until the load on the system has decreased before executing the task again. If there is insufficient free space, free up the required amount of space. If the task does not end, end the task by using the <code>arcmigstop</code> command. If the problem cannot be resolved, acquire all log data, and then contact maintenance personnel.
KAQM37749-E	An attempt to configure settings failed, because the value specified for the number of read-ahead threads for file systems that use the Volume Shadow Copy Service exceeds the maximum value for thread pool for which the thread pool type is Other.	For the number of read-ahead threads for file systems that use the Volume Shadow Copy Service, specify a value that is less than or equal to the maximum value for thread pool for which the thread pool type is Other. (O) Revise the following values, and then try the operation again: the number of read-ahead threads for file systems that use the Volume Shadow Copy Service and the value set for thread pool for which the thread pool type is Other.
KAQM37750-W	An attempt to access the work space failed. Migration will be performed without using the work space. (file system name = <i>file-system-name</i> , cause = {Insufficient space Internal processing in progress Error some other error})	An attempt to access the work space failed. (O) If the size of the work space is insufficient, revise the size of the work space. If internal processing is in progress, revise the migration interval. If an error has occurred, perform the procedure for recovering from errors in the work space as described in the online Help. In all other cases, acquire all log data, and then contact maintenance personnel.
KAQM37751-E	An attempt to access the work space failed. Migration will be performed without using the work space. (file system name = <i>file-system-name</i> , cause = {Insufficient space Internal	An attempt to access the work space failed. (O) If the size of the work space is insufficient, revise the size of the work

Message ID	Message	Description and Action
	processing in progress Error some other error})	space. If internal processing is in progress, revise the migration interval. If an error has occurred, perform the procedure for recovering from errors in the work space as described in the online Help. In all other cases, acquire all log data, and then contact maintenance personnel.
KAQM37752-I	The amount of space used by the work space is displayed. (file system name = <i>file-system-name</i> , used size = <i>amount-of-space-used-by-the-work-space</i>)	The amount of space used by the work space is displayed. (O) None.
KAQM37753-W	The size of the work space is too small. Increase the size of the work space. (file system name = <i>file-system-name</i> , used size = <i>amount-of-space-used-by-the-work-space</i> , recommended size = <i>recommended-size-of-the-work-space</i>)	The size of the work space is too small. (O) Increase the size of the work space.
KAQM37754-E	An attempt to acquire the past version of the attribute information of the selected file or directory failed.	An error might have occurred in the communication with HCP. (O) Check the network status, and then try again. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM37755-E	An internal error occurred during the acquisition of the past version of the attribute information of a file or directory.	An internal error occurred during processing. (O) Acquire all the log data, and then contact maintenance personnel.
KAQM37756-I	The value specified for the number of read-ahead threads for file systems that use the Volume Shadow Copy Service was automatically changed, because the maximum value for thread pool for which the thread pool type is Other was changed.	For the number of read-ahead threads for file systems that use the Volume Shadow Copy Service, you must specify a value that is less than or equal to the maximum value for thread pool for which the thread pool type is Other. (O) To check the value that was automatically set for the number of read-ahead threads for file systems that use the Volume Shadow Copy Service, use the <code>arconflist</code> command.

Message ID	Message	Description and Action
KAQM37757-W	An attempt to access the work space failed. (file system name = <i>file-system-name</i> , cause = {Insufficient space Internal processing in progress Error some other error})	An attempt to access the work space failed. (O) If the size of the work space is insufficient, revise the size of the work space. If internal processing is in progress, revise the migration interval. If an error has occurred, perform the procedure for recovering from errors in the work space as described in the online Help. In all other cases, acquire all log data, and then contact maintenance personnel.
KAQM37758-E	Information about the task executed on the specified date does not exist.	Information about the task executed on the specified date does not exist. (O) Specify information about a task that exists.
KAQM37759-W	The work space settings were cleared as a result of the error recovery processing. Migration will be performed without using the work space. (file system name = <i>file-system-name</i>)	The work space settings were cleared as a result of the error recovery processing. (O) Reconfigure the work space.
KAQM37760-E	An attempt to reference the past version of a file or directory failed because of a temporary error. (reason = {insufficient memory an I/O error no disk space some other error})	An attempt to reference the past version of a file or directory failed because of a temporary error. (O) Wait a while, and then retry the operation. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM37761-I	The task has not been executed.	The task has not been executed. (O) None.
KAQM37763-W	The migration history failed to be updated, but processing continued. (file system name = <i>file-system-name</i> , task name = <i>task-name</i> , Run ID = <i>run-id</i>)	Disk space might be insufficient, or an error might have occurred in the file system. (O) Check the status of the file system in the list of file systems. If there is insufficient disk space, expand the file system. If an error has occurred in the file system, perform the error recovery procedure described in the online Help. The history will be updated the next time migration is performed. In all other cases, acquire all log data, and then contact maintenance personnel.

Message ID	Message	Description and Action
KAQM37764-I	The migration results file does not exist.	The task was never executed, or the migration execution results file was automatically deleted after a certain period of time. (O) None.
KAQM37765-E	Archiving is already being performed for the specified file system. (filesystem name = <i>file-system-name</i> , task name = <i>task-name</i>)	Archiving is already being performed for the specified file system. (O) Wait for archive processing to finish, and then retry the operation.
KAQM37770-E	There is not enough space in the file system to enable the Large File Transfer function.	There is not enough space in the file system to enable the Large File Transfer function. (O) To enable the Large File Transfer function, make sure the file system has enough space (greater than or equal to the minimum amount of space required to enable the Large File Transfer function).
KAQM37771-E	The linked HCP system does not support the Large File Transfer function.	The linked HCP system might not support the Large File Transfer function, or a communication error might have occurred with the HCP system. (O) Check whether the linked HCP system supports the Large File Transfer function. If it does, check the connection with the HCP system. If a communication error has occurred, remove the cause of the error by following the directions in the error message, and then try the operation again.
KAQM37772-W	The size of the work space is too small. Increase the size of the work space. (file system name = <i>file-system-name</i> , used size = <i>amount-of-space-used-by-the-work-space</i>)	The size of the work space is too small. (O) Expand the work space capacity. For recommendations on the amount by which to expand the work space capacity, see the <i>Installation and Configuration Guide</i> .
KAQM37773-E	The work space cannot be disabled or released, because the Large File Transfer function is enabled.	The work space cannot be disabled or released, because the Large File Transfer function is enabled. (O)

Message ID	Message	Description and Action
		Disable the Large File Transfer function, and then disable or release the work space.
KAQM37774-E	An attempt to configure the Large File Transfer function failed.	An attempt to configure the Large File Transfer function failed. (O) Check the status of the file system or work space. If an error has occurred in the file system or work space, perform the troubleshooting procedure in the Help. In all other cases, acquire all log data, and then contact maintenance personnel.
KAQM37775-W	An attempt to perform migration by using the Large File Transfer function failed. Migration will be performed without using the work space. (file system name = <i>file-system-name</i> , cause = {Insufficient space insufficient memory Internal processing in progress Error some other error}.)	An attempt to perform migration by using the Large File Transfer function failed. (O) If the cause of the error is 'Insufficient space', increase the amount of available space in the file system or work space. If the cause is 'insufficient memory', wait for a while, and then perform migration again. If the cause is 'Internal processing in progress', revise the migration interval. If the cause is 'Error', perform the procedure for troubleshooting errors related to file systems and work spaces, which is described in the Help. In all other cases, acquire all log data, and then contact maintenance personnel.
KAQM37776-W	The Large File Transfer function was enabled even though the size of the work space is less than the recommended size. (recommended work space size = <i>recommended-work-space-size</i>)	The Large File Transfer function was enabled even though the size of the work space is less than the recommended size. (O) Increase the size of the work space so that it is equal to or greater than the recommended size.
KAQM37780-E	One or more files that were not stubbed exist because data on the HCP system were not found. (file system name = <i>file-system-name</i>)	One or more files that were not stubbed exist because data on the HCP system were not found. (O) Contact maintenance personnel.
KAQM37781-E	File stubbing failed for some files, because an operation on the management information file for stubbing failed. (file system name = <i>file-system-name</i>)	File stubbing failed for some files, because an operation on the management information file for stubbing failed. (O)

Message ID	Message	Description and Action
		Using the <code>arccorrection</code> command, rebuild the management information for the file system.

KAQM38 messages

This section explains messages that have a message ID beginning with KAQM38, and the actions to be taken if such messages appear.

Table 5-26 KAQM38 messages

Message ID	Message	Description and Action
KAQM38003-E	An unexpected error occurred.	An error occurred in internal processing. (O) If you are the system administrator, acquire all the Management log files and then contact maintenance personnel. If you are maintenance personnel, acquire the OS log by using the <code>oslogget</code> command, and then contact the Support Center.
KAQM38004-Q	Do you want to delete all converted dump files? (y/n)	This message is output to confirm that the user wants to delete all converted dump files. (O) Enter y or n.
KAQM38007-E	An attempt to reset the other node in the cluster failed.	A network error might have occurred, or an error might have occurred in internal processing. (O) Make sure that no network error has occurred, and retry execution. If the error occurs again, the system administrator asks maintenance personnel to acquire the log data and to contact the Support Center. The maintenance personnel acquire the OS log data by using the <code>oslogget</code> command, and then contact the Support Center.
KAQM38008-E	The reset processing timed out.	An OS error or a hardware malfunction might have occurred. (O) Follow the instructions in the maintenance manual to identify the problem.

Message ID	Message	Description and Action
KAQM38009-Q	Do you want to reset the other node in the cluster? (y/n)	This message is output to confirm whether the user wants to reset the other node in the cluster. (O) Enter y or n.
KAQM38012-E	The specified file format is invalid.	The specified file is not supported by the program to be installed. (O) Be sure to specify the correct archive file required for the installation, and then retry the operation.
KAQM38015-I	<i>installed-program-name</i> has been installed. (installation file = <i>name-of-rpm-file-used-for-installation</i>)	The specified program has been installed. (O) No action is required.
KAQM38021-I	Dump files will now be converted. Conversion will take time.	Dump files will be converted because unconverted dump file exist. (O) If you are the system administrator, check system message KAQG62004-I to confirm whether dump file conversion is complete. If it is complete, download the dump files. If you are maintenance personnel, check SIM trouble message KAQK39528-I to confirm whether dump file conversion is complete. If it is complete, download the dump files.
KAQM38027-Q	Do you want to reset this node? (y/n)	This message is output to confirm that the user wants to reset the node being accessed. (O) Enter y or n.
KAQM38036-E	The contents of the specified schedule are invalid.	The contents of the specified schedule are invalid. (O) Make sure the specified values are correct, and then retry the operation.
KAQM38037-W	Schedule settings were processed successfully, but relearn is disabled.	Relearn for the internal RAID battery is disabled. (O) If you are the system administrator, ask maintenance personnel to enable relearn for the internal RAID battery. If you are one of the maintenance personnel, enable relearn to execute relearn on the specified schedule.

Message ID	Message	Description and Action
KAQM38038-E	An attempt to read a system file has failed.	An unexpected error occurred when reading a file. (O) If you are the system administrator, acquire all log data, and then contact maintenance personnel. If you are one of the maintenance personnel, acquire the OS log by using the <code>oslogget</code> command, and then contact the Support Center.
KAQM38039-E	An attempt to write a system file has failed.	An unexpected error occurred writing a file. (O) If you are the system administrator, acquire all log data, and then contact maintenance personnel. If you are one of the maintenance personnel, acquire the OS log by using the <code>oslogget</code> command, and then contact the Support Center.
KAQM38040-E	The specified virtual server is running on the other node or the status is incorrect.	The specified virtual server is running on the other node or the status is incorrect. (O) Use the <code>vnaslist</code> command to confirm which node the virtual server is running on and the status of the node. Depending on the cause, re-execute the command on the other node, or return the virtual server to a normal status.
KAQM38042-Q	Do you want to reset the virtual server <i>virtual-server-name</i> ? (y/n)	(O) Enter "y" to proceed, or "n" to cancel.
KAQM38043-E	The specified virtual server does not exist.	The specified virtual server does not exist. (O) Use the <code>vnaslist</code> command to confirm whether the virtual server exists.

KAQM50 messages

This section explains messages that have a message ID beginning with KAQM50, and the actions to be taken if such messages appear.

Table 5-27 KAQM50 messages

Message ID	Message	Description and Action
KAQM50001-E	Authentication failed, please try again.	Failed in the authentication. Try again. (S) Stop processing to open the dialog. (O) Open the dialog again. If same error continues, acquire log files, and contact to maintenance personnel.
KAQM50002-E	The session is being used, please close all browsers and retry.	The session is in use. Close all browsers and retry. (S) Close the dialog. (O) Confirm whether other dialog have been connected to the same node. If not, close all browsers and retry.
KAQM50003-E	Failed in the capacity information acquisition of file system.	Failed in the acquisition of capacity information of file system. (S) - (O) Confirm whether malfunction does not occur in the file system.
KAQM50004-E	An internal error occurred. (Check policy name exception.)	An internal error occurred. (S) - (O) Acquire log files, and contact to maintenance personnel.
KAQM50005-E	An internal error occurred. (Check file system name exception.)	An internal error occurred. (S) - (O) Acquire log files, and contact to maintenance personnel.
KAQM50006-E	An internal error occurred. (Check file system detail exception.)	An internal error occurred. (S) - (O) Acquire log files, and contact to maintenance personnel.
KAQM50007-E	An internal error occurred. (Check HCP exception.)	An internal error occurred. (S)

Message ID	Message	Description and Action
		- (O) Acquire log files, and contact to maintenance personnel.
KAQM50008-E	An error occurred. (<i>detail-message</i>)	An error occurred. (S) - (O) Please restart. If same error continues, acquire log files, and contact to maintenance personnel.
KAQM50009-E	Your session has expired due to inactivity. Please retry.	The session has expired. Please retry. (S) Close the dialog. (O) Please retry.
KAQM50010-E	An internal error occurred. (Check query exception.)	An internal error occurred. (S) - (O) Acquire log files, and contact to maintenance personnel.
KAQM50011-E	Checking of HCP access was interrupted.	Checking of HCP access was interrupted. (S) - (O) Please retry the operation. If same error continues, acquire log files, and contact to maintenance personnel.
KAQM50012-E	An internal error occurred. (Password conversion exception.)	An internal error occurred. (S) - (O) Acquire log files, and contact to maintenance personnel.
KAQM50013-E	An error occurred while reading HCP access result.	An error occurred while reading HCP access result. (S) - (O) Please retry the operation. If same error continues, acquire log files, and contact to maintenance personnel.

Message ID	Message	Description and Action
KAQM50014-E	The service is not available.	The service is not available. (S) Stop processing to open the dialog. (O) Wait for a while and try again. If same error continues, confirm whether the KAQM509nn message(s) was notified to the system message(s) or SNMP notification message(s).
KAQM50015-E	Acquiring information of file systems was interrupted.	Acquiring information of file systems was interrupted. (S) - (O) Wait for a while and try again. If same error continues, acquire log files, and contact to maintenance personnel.
KAQM50016-E	An error occurred while acquiring information of file systems. (return code=1)	An error occurred while acquiring information of file systems. (S) - (O) Wait for a while and try again. If same error continues, acquire log files, and contact to maintenance personnel.
KAQM50017-E	An error occurred while acquiring information of file systems. (return code=20)	An error occurred while acquiring information of file systems. (S) - (O) Wait for a while and try again. If same error continues, acquire log files, and contact to maintenance personnel.
KAQM50018-E	An unexpected error occurred while acquiring information of file systems.	An unexpected error occurred while acquiring information of file systems. (S) - (O) Wait for a while and try again. If same error continues, acquire log files, and contact to maintenance personnel.
KAQM50019-E	HTTP status error. (Code= <i>status-code</i>) Please retry the operation.	HTTP status error. Retry the operation. (S) - (O)

Message ID	Message	Description and Action
		<ul style="list-style-type: none"> • Please retry the operation. KAQM50812-I	Migration terminated. (Policy name: <i>policy-name</i> , Task id: <i>task-id</i> , Task status: <i>task-status</i> , Lastexec start time: <i>lastexec-start-time</i> , Lastexec end time: <i>lastexec-end-time</i> , Target files: <i>target-files</i> , Succeeded files: <i>succeeded-files</i> , Failed files: <i>failed-files</i>)	Migration terminated. (S) - (O) If there are failed files, check Details (failure-list) in Task Management window, and then take action appropriate for the message.
KAQM50813-E	The service (RMI Server) was restarted because the service was stopped by a failure.	The service was stopped by a failure. (S) - (O) Some running policies might be interrupted. Confirm the status of each policy, and schedule again as needed.
KAQM50814-E	The file paths of succeeded files/failed files/analyzed files after <i>processed-files</i> files in total cannot be confirmed in Task Management window because the database is full. (Policy name: <i>policy-name</i> , Task id: <i>task-id</i> , Lastexec start time: <i>lastexec-start-time</i>)	All or some of file paths cannot be confirmed in Task Management window. (S) - (O) Take the following action to reduce the capacity of the database: <ul style="list-style-type: none"> Delete policies if unused policies exist.
KAQM50815-W	Task execution was interrupted. (Policy name: <i>policy-name</i> , Task id: <i>task-id</i>)	Task execution was interrupted because the specified maximum duration passed. (S) -

Message ID	Message	Description and Action
		(O) In the Task Management window, see "evaluation-of-duration", and then change the maximum duration setting to ensure sufficient time to execute the task.
KAQM50816-E	An analysis of a system file failed.	An analysis of a system file failed. (S) - (O) In the list of file systems, check the status of the file systems. If a file system has an error, follow the error recovery procedure provided in the online Help, and then try executing the task again. If a file system has insufficient unused capacity, free up the necessary amount, and then try executing the task again. In other cases, acquire all log files, and then contact maintenance personnel.
KAQM50900-E	Starting service failed. (Service IP is not set.)	Service IP is not set. (S) Stop start processing. (O) Acquire log files, and contact to maintenance personnel.
KAQM50901-E	Starting service failed. (Database)	Failed in the start of a database. (S) Continue start processing. (O) Confirm whether malfunction does not occur in cluster management LU or file system, and restart resource group. If same error continues, Acquire log files, and contact to maintenance personnel.
KAQM50902-E	Starting service failed. (Web Server)	Failed in the start of a Web Server. (S) Continue start processing. (O) Restart resource group. If same error continues, Acquire log files, and contact to maintenance personnel.
KAQM50903-E	Starting service failed. (RMI Server)	Failed in the start of an RMI Server. (S) Continue start processing. (O)

Message ID	Message	Description and Action
		Restart resource group. If same error continues, Acquire log files, and contact to maintenance personnel.
KAQM50904-E	Starting service failed. (Failed to mount <i>device-name</i> .)	Failed in the mount of cluster management LU to use on the database. (S) Continue start processing. (O) Confirm whether malfunction does not occur in cluster management LU or file system, and restart resource group.
KAQM50905-E	Starting service failed. (File I/O error)	Starting service failed. (S) Continue start processing. (O) Acquire log files, and contact to maintenance personnel.
KAQM50906-E	Starting service failed. (Failed to initialize database.)	Failed in the initialization of database. (S) Continue start processing. (O) Acquire log files, and contact to maintenance personnel.
KAQM50921-E	Configuration database failed. (Making a file system for database failed.)	Failed in making of the file system to use on the database. (S) Stop execution of the command. (O) Confirm whether malfunction does not occur in cluster management LU or file system, and retry.
KAQM50922-E	Configuration database failed. (Initializing database failed.)	Failed in initialization of a database. (S) Stop execution of the command. (O) Acquire log files, and contact to maintenance personnel.
KAQM50923-E	Configuration database failed. (Failed in the contents confirmation of <i>database-path</i> .)	Failed to check contents of cluster management LU. (S) Stop execution of the command. (O)

Message ID	Message	Description and Action
		Acquire log files, and contact to maintenance personnel.
KAQM50924-E	Configuration database failed. (Failed in deletion of existing database.)	Failed in deletion of existing database. (S) Stop execution of the command. (O) Acquire log files, and contact to maintenance personnel.
KAQM50925-E	Configuration database failed. (<i>device-name</i> is not found.)	Cluster management LU to use on the database is not found. (S) Stop execution of the command. (O) Confirm whether malfunction does not occur in cluster management LU or file system, and retry.
KAQM50926-E	Configuration database failed. (Failed to unmount <i>device-name</i> .)	Failed in unmount of cluster management LU to use on the database. (S) Stop execution of the command. (O) Confirm whether malfunction does not occur in cluster management LU or file system, and retry.
KAQM50927-E	Configuration database failed. (Because <i>database-path</i> is being accessed, cannot unmount.)	Because a process to access a database is remained, Cannot unmount cluster management LU. (S) Stop execution of the command. (O) Acquire log files, and contact to maintenance personnel.
KAQM50928-E	Configuration database failed. (<i>device-name</i> is mounted. Stop service at first.)	Cluster management LU is mounted. Stop service before running this command. (S) Stop execution of the command. (O) Retry after stopping resource group.
KAQM50929-E	Configuration database failed. (<i>device-name</i> may be used by another node of cluster.)	Cluster management LU to use on the database may be used by another node of cluster. (S) Stop execution of the command.

Message ID	Message	Description and Action
		(O) <ul style="list-style-type: none"> • Retry after stopping resource group. • If another node is not running, retry after starting the other node. • Check whether a network is available.
KAQM50930-E	Configuration database failed. (Failed to mount <i>device-name</i> .)	Failed in the mount of cluster management LU to use on the database. (S) Stop execution of the command. (O) Confirm whether malfunction does not occur in cluster management LU or file system, and retry.
KAQM50941-E	The database backup/restore failed. (Number of arguments is invalid.)	Failed to start backup/restore command. Because the number of specified argument is invalid. (S) Stop execution of the command. (O) Acquire log files, and contact to maintenance personnel.
KAQM50942-E	The database backup/restore failed. (Unknown operation was specified in the arguments. <i>first-argument</i>)	Failed to start backup/restore command. Because the specified operation in argument is invalid. (S) Stop execution of the command. (O) Acquire log files, and contact to maintenance personnel.
KAQM50943-E	The database backup failed. (The specified directory <i>second-argument</i> storing backup file is not found or is not a directory.)	Failed to start backup command. Because the specified directory is not found or is not a directory. (S) Stop execution of the command. (O) Confirm whether there is the specified directory.
KAQM50944-E	The database restore failed. (There is not backup file in the specified directory <i>second-argument</i> .)	Failed to start restore command. Because there is not backup file in the specified directory. (S) Stop execution of the command. (O)

Message ID	Message	Description and Action
		Confirm whether there is the backup file in the specified directory.
KAQM50945-E	The database backup/restore failed. (The database directory <i>device-name</i> is not found.)	Cluster management LU to use on the database is not found. (S) Stop execution of the command. (O) Confirm whether malfunction does not occur in cluster management LU or file system, and retry.
KAQM50946-E	The database restore failed. (The database directory <i>device-name</i> is mounted. Stop service at first.)	Cluster management LU is mounted. (S) Stop execution of the command. (O) Retry after stopping resource group and initializing database.
KAQM50947-E	The database backup/restore failed. (Failed to start database.)	Failed in the start of a database. (S) Stop execution of the command. (O) Confirm whether malfunction does not occur in cluster management LU or file system, and retry.
KAQM50948-E	The database backup failed.	Failed in the backing up a database. (S) Stop execution of the command. If the command started a database the command stop it before stop execution of the command. (O) Confirm whether the directory can be written, and retry. If same error continues, acquire log files, and contact to maintenance personnel.
KAQM50949-E	The database restore failed.	Failed in the restoring the database. (S) Stop execution of the command after stop a database. (O) Confirm whether it is a backup file normally acquired.
KAQM50950-E	The database backup/restore failed. (Failed to stop database.)	Failed in the stop of a database. (S) Stop execution of the command. (O)

Message ID	Message	Description and Action
		Confirm whether malfunction does not occur in cluster management LU or file system, and retry.

KAQM55 messages

This section explains messages that have a message ID beginning with KAQM55, and the actions to be taken if such messages appear.

Table 5-28 KAQM55 messages

Message ID	Message	Description and Action
KAQM55001-E	There are too many or too few parameters.	There are too many or too few parameters. (O) Check the format of the command, and retry specifying a suitable parameter.
KAQM55002-E	A syntax error exists in the parameter (<i>parameter</i>).	A syntax error exists in the specified parameter. (O) Specify valid syntax according to the help.
KAQM55003-E	The argument specified for the option (<i>name-of-option-to-which-an-incorrect-argument-is-specified</i>) is incorrect. (entered value = <i>incorrect-argument</i>)	The argument specified for the indicated option is invalid. (O) Specify a valid value as described in the help.
KAQM55004-E	The specified directory contains a relative path. (entered value = <i>directory-name</i>)	The specified directory contains a relative path. (O) Specify a valid value as described in the help.
KAQM55005-E	The specified file system does not exist.	The specified file system does not exist. (O) Specify a valid file system name, and then retry the operation.
KAQM55006-E	The specified task does not exist.	The specified task does not exist. (O) Specify a correct task name and retry the operation.
KAQM55007-E	The specified policy ID does not exist.	The specified policy ID does not exist. (O)

Message ID	Message	Description and Action
		Specify the correct policy ID, and then retry the operation.
KAQM55008-E	You cannot specify an interval of more than one hour for read-write-content-sharing file system, or for home-directory-roaming file system.	You cannot specify an interval of more than one hour for read-write-content-sharing file system, or for home-directory-roaming file system. (O) Specify an interval that is within one hour.
KAQM55009-E	You cannot specify a duration for read-write-content-sharing file system, or for home-directory-roaming file system.	You cannot specify a duration for read-write-content-sharing file system, or for home-directory-roaming file system. (O) Check the file system, and then retry the operation.
KAQM55010-E	You cannot specify a policy for read-write-content-sharing file system, or for home-directory-roaming file system.	You cannot specify a policy for read-write-content-sharing file system, or for home-directory-roaming file system. (O) Check the file system, and then retry the operation.
KAQM55011-E	You cannot add a task for read-write-content-sharing file system, or for home-directory-roaming file system.	You cannot add a task for read-write-content-sharing file system, or for home-directory-roaming file system. (O) Check the file system, and then retry the operation.
KAQM55012-E	You cannot delete a task from read-write-content-sharing file system, or for home-directory-roaming file system.	You cannot delete a task from read-write-content-sharing file system, or for home-directory-roaming file system. (O) Check the file system, and then retry the operation.
KAQM55013-E	The maximum number of tasks that can be registered to the file system has been exceeded.	An attempt was made to register tasks that exceed the maximum number of tasks that can be registered to the file system. (O) Delete unnecessary tasks, and then retry the operation.
KAQM55014-E	A task with the same name already exists in the specified file system.	An existing task name was specified. (O) Specify a task name that does not exist, and then retry the operation.

Message ID	Message	Description and Action
KAQM55015-E	A policy ID with the same name already exists in the specified task.	An existing policy ID was specified. (O) Specify the new policy ID to be created.
KAQM55016-E	The maximum number of policies that can be registered to the file system has been exceeded.	The maximum number of policies that can be registered has been reached. (O) Delete unnecessary policies, and then retry the operation.
KAQM55017-E	The maximum number of filters (20) that can be set for the policy has been exceeded.	The maximum number of filters (20) that can be set for the policy has been exceeded. (O) Specify filters so that the maximum number of filters (20) that can be set for the policy is not exceeded.
KAQM55018-E	An attempt to read the system file has failed.	An unexpected error occurred when reading a file. (O) In [List of File Systems], check the status indicated for the file system, and then take action appropriate for the status. If no status indicates a problem, and you cannot identify the cause of the problem, acquire all the Management log files, and then contact maintenance personnel. For a list of the Management log files, see Help.
KAQM55019-E	An attempt to write a system file has failed.	An unexpected error occurred writing a file. (O) In [List of File Systems], check the status indicated for the file system, and then take action appropriate for the status. If no status indicates a problem, and you cannot identify the cause of the problem, acquire all the Management log files, and then contact maintenance personnel. For a list of the Management log files, see Help.
KAQM55020-E	An internal error occurred.	An internal error occurred during processing. (O) Acquire all the log data, and then contact maintenance personnel.
KAQM55021-E	Lock acquisition failed.	Lock acquisition failed.

Message ID	Message	Description and Action
		(O) Wait a while, and then retry the operation. If the error persists, acquire all the log data, and then contact maintenance personnel.
KAQM55022-E	A namespace is not set for the specified file system.	A namespace is not set for the specified file system. (O) Check the file system, and then retry the operation.
KAQM55023-E	A namespace-referencing file system cannot be specified.	The file system is for referencing namespaces. (O) Specify a file system that is not used for referencing namespaces, and then retry the operation.
KAQM55024-E	The specified file system is blocked.	The specified file system or the device file being used by the file system is blocked. (O) Follow troubleshooting in the help to check the file system and device file error information in the List of File Systems, and then recover the error with maintenance personnel.

KAQM71 messages

This section explains messages that have a message ID beginning with KAQM71, and the actions to be taken if such messages appear.

Table 5-29 KAQM71 messages

Message ID	Message	Description and Action
KAQM71002-E	An internal error occurred.	An internal occurred during processing. (O) Contact the HCP Anywhere administrator.
KAQM71003-E	An operation on a system file failed. (reason = {insufficient memory I/O error out of disk space some other error})	An operation on a system file failed. (O) If the reason for the error is insufficient memory, wait until the load on the system decreases, and then retry the operation. If this does not resolve the problem, contact the HCP Anywhere administrator.

Message ID	Message	Description and Action
KAQM71004-E	Node configuration information could not be acquired. (Details: message ID = <i>message-ID</i>)	See the error reason that corresponds to the message ID that was output. (O) Contact the HCP Anywhere administrator.
KAQM71005-E	The connected server is not an HCP Anywhere server.	The connected server is not an HCP Anywhere server. (O) Make sure that the URL is correct, and then retry the operation. If this does not resolve the problem, contact the HCP Anywhere administrator.
KAQM71006-E	An attempt to connect to HCP Anywhere failed.	An attempt to connect to HCP Anywhere failed. (O) Make sure that the specified URL is correct. If you are using a proxy server, check the proxy server settings. Check the network status, and then retry the operation. If this does not resolve the problem, contact the HCP Anywhere administrator.
KAQM71007-E	Authentication with the HCP Anywhere system failed.	The password might be incorrect. (O) Make sure that the password is correct, and then retry the operation. If this does not resolve the problem, contact the HCP Anywhere administrator.
KAQM71008-E	A request to the HCP Anywhere system failed.	Communication with the HCP Anywhere system might have been temporarily lost due to a heavy load on the HCP Anywhere system. (O) Wait a few minutes, and then retry the operation. If this does not resolve the problem, contact the HCP Anywhere administrator.
KAQM71009-E	Node configuration information could not be updated. (Details: message ID = <i>message-ID</i> [, <i>message-ID</i> ...])	See the error reason that corresponds to the message ID that was output. (O) Contact the HCP Anywhere administrator.
KAQM71010-E	The configuration information that was acquired from HCP Anywhere does not apply to the current state. (reason = {invalid host name reduced file system size changes to	The configuration information that is set in HCP Anywhere might be incorrect. (O)

Message ID	Message	Description and Action
	the connection-target namespace changes to the WORM file system settings insufficient disk space on the node changes to the service automatic-launch settings settings to disable encryption some other error})	Contact the HCP Anywhere administrator.
KAQM71011-E	The HCP Anywhere host name could not be resolved.	Name resolution did not complete correctly. (O) Make sure that the URL is correct, and then retry the operation. If the error occurs again, make sure that the network environment allows name resolution.
KAQM71012-E	An attempt to connect to HCP Anywhere failed.	There might be a problem with either the HCP Anywhere system or the network. (O) Check the network status, and then retry the operation. If the error occurs again, contact the HCP Anywhere administrator.
KAQM71013-E	An attempt to establish an SSL connection with HCP Anywhere failed.	An attempt to establish an SSL connection with HCP Anywhere failed. (O) Check the network status, and then retry the operation. If the error occurs again, contact the HCP Anywhere administrator.
KAQM71014-E	A timeout occurred during communication with HCP Anywhere.	There might be a problem with either the HCP Anywhere system or the network, or HCP Anywhere might be under heavy load. (O) Check the network status, and then retry the operation. If the error occurs again, contact the HCP Anywhere administrator.
KAQM71015-E	A communication error occurred in the connection with HCP Anywhere.	A communication error occurred in the connection with HCP Anywhere. (O) Check the network status, and then retry the operation. If the error occurs again, contact the HCP Anywhere administrator.

Message ID	Message	Description and Action
KAQM71016-E	The service was stopped because of a request from the HCP Anywhere administrator.	The service was stopped because of a request from the HCP Anywhere administrator. (O) Contact the HCP Anywhere administrator.
KAQM71017-E	A timeout occurred during a resource operation.	The system might be under heavy load, or another resource operation might be in progress. (O) No action is required. The operation will be executed again when the reporting function is next executed.
KAQM71018-E	Authentication with the HCP Anywhere system failed.	The HCP Anywhere administrator might have changed the password. (O) Contact the HCP Anywhere administrator to obtain an authentication password, and then try to authenticate with HCP Anywhere again.
KAQM71019-E	The service for the target device was not started in HCP Anywhere.	Either the service for the target device might not have started in HCP Anywhere, or the specified serial number might be wrong. (O) Check whether the entered information is correct, and revise it if necessary. If the information is correct, contact the HCP Anywhere administrator.
KAQM71021-E	A request to HCP Anywhere failed because the current version of HCP Anywhere does not support the node.	An HCP Anywhere version that is older than a version that supports the node is being used. (O) Check the version of HCP Anywhere, and then ask your HCP Anywhere administrator to install an appropriate version.
KAQM71022-Q	Linkage with HCP Anywhere will be disabled. After it is disabled, you cannot link HDI RS with HCP Anywhere. Are you sure you want to run the command? (y/n)	This confirmation message is displayed before the linkage with HCP Anywhere is disabled. (O) Enter y or n.
KAQM71023-E	The operation cannot be performed because processing to link HDI RS with HCP Anywhere is in progress.	Processing to link HDI RS with HCP Anywhere is in progress. (O)

Message ID	Message	Description and Action
		Wait a while, and then retry the operation.
KAQM71024-W	The setting for periodic saving of system settings failed, but processing continued. The setting information is not being saved periodically. (Details = <i>Details</i>)	The setting for periodic saving of system settings failed. (O) Resolve the error according to the error details, and then specify the setting for periodic saving of system settings.
KAQM71025-E	The operation cannot be performed because HDI RS is not linked with HCP Anywhere.	HDI RS is not linked with HCP Anywhere. (O) No action is necessary.
KAQM71026-E	The operation cannot be performed because the resource group has not been stopped.	The resource group has not been stopped. (O) Stop the resource group, and perform the operation again.

KAQS Messages (File snapshots Messages)

This chapter describes the KAQS messages output by HDI systems (File snapshots messages).

- [KAQS messages](#)

KAQS messages

This section explains messages that have a message ID beginning with KAQS (File snapshots messages), and the actions to be taken if such messages appear.

Table 6-1 KAQS messages

Message ID	Message	Description and Action
KAQS11000-I	The <i>command-name</i> command execution has started.	Syntax checking has ended normally. Command execution will now start. (S) None. (O) None.
KAQS11001-I	The <i>command-name</i> command has finished.	The command has ended normally. (S) None. (O) None.
KAQS11002-E	An option is invalid.	The type, number, or order of specified options is invalid. (S) Cancels command execution. (O) After checking the command format, specify the correct options, and then re-execute the command.
KAQS11003-E	There are too many or too few parameters.	The number of specified parameters is invalid. (S) Cancels command execution. (O) After checking the command format, specify the correct parameters, and then re-execute the command.
KAQS11004-E	The <i>parameter-name</i> parameter is too short or too long.	The length of the specified parameter is invalid. (S) Cancels command execution. (O) After checking the command format, specify the correct parameter value, and then re-execute the command.
KAQS11005-E	The value of the <i>parameter-name</i> parameter is invalid.	The format of the specified parameter (such as a character string or numeric value) is invalid.

Message ID	Message	Description and Action
		(S) Cancels command execution. (O) After checking the command format, specify the correct parameter value, and then re-execute the command.
KAQS11006-E	An attempt to allocate memory has failed.	Processing terminated because memory allocation failed during command execution. (S) Cancels command execution. (O) Wait a few moments, and then re-execute the command. If the error occurs again, acquire all the log files, and then contact maintenance personnel. For a list of the file snapshot functionality log files, see online Help.
KAQS11007-E	An unexpected error occurred. (maintenance information 1 = <i>maintenance-information</i>)	Processing terminated because a processing conflict occurred during command execution. (S) Cancels command execution. (O) Acquire all the log files, and then contact maintenance personnel. For a list of the file snapshot functionality log files, see online Help.
KAQS11008-E	The specified file system does not exist.	Processing cannot be executed because the specified file system does not exist in the system. (S) Cancels command execution. (O) Specify the correct file system name, and then re-execute the command.
KAQS11009-E	No license is set to allow use of basic functionality.	No file snapshot functionality commands can be executed because a license has not been set yet for the basic functionality. (S) Cancels command execution. (O) Set a license for the basic functionality.

Message ID	Message	Description and Action
KAQS11011-I	Usage: syncstop file_system_name [-nomsg] -h	This message displays the command format when a syntax error occurs or the -h option is specified. (S) Terminates command execution. (O) If a syntax error occurs, check the command format, and then retry.
KAQS11012-I	Usage: syncadd [-r name_of_differential- data_snapshot_to_be_remove d] file_system_name name_of_differential- data_snapshot_to_be_created [-nomsg] -h	This message displays the command format when a syntax error occurs or the -h option is specified. (S) Terminates command execution. (O) If a syntax error occurs, check the command format, and then retry.
KAQS11013-I	Usage: syncdel {-a file_system_name [-f] file_system_name differential- data_snapshot_name[,differen tial-data_snapshot_name...]} [-nomsg] -h	This message displays the command format when a syntax error occurs or the -h option is specified. (S) Terminates command execution. (O) If a syntax error occurs, check the command format, and then retry.
KAQS11014-I	Usage: syncmount [-b] file_system_name differential- data_snapshot_name mount_point_directory_name [-nomsg] -h	This message displays the command format when a syntax error occurs or the -h option is specified. (S) Terminates command execution. (O) If a syntax error occurs, check the command format, and then retry.
KAQS11015-E	Usage: syncumount mount_point_directory_name [-nomsg] -h	This message displays the command format when a syntax error occurs or the -h option is specified. (S) Terminates command execution. (O) If a syntax error occurs, check the command format, and then retry.
KAQS11016-I	Usage: synclist [-t -T] [[-w] [- d] [-e] [-s] [-b] [-u] [-p] [-x] [-o] [-G] -v] {-a -l file_system_name file_system_name differential-	This message displays the command format when a syntax error occurs or the -h option is specified. (S) Terminates command execution.

Message ID	Message	Description and Action
	data_snapshot_name} [-nomsg] -h	(O) If a syntax error occurs, check the command format, and then retry.
KAQS11017-E	The specified device file does not exist, or the capacity of the LU allocated to the virtual server was changed.	The specified device file does not exist, or the capacity of the LU allocated to the virtual server was changed. (S) Cancels command execution. (O) Verify the specified device-file name, and then retry the operation. If the capacity of the LU allocated to the virtual server was changed, use the <code>vnaslurelease</code> command to release the LU. After that, execute the <code>fpstatus</code> command on both nodes, verify the status of the LU on both nodes, and then execute the <code>vnasluassign</code> command to reallocate the LU to the virtual server.
KAQS11018-E	The specified device file is being used.	The specified device file is being used for another purpose. (S) Cancels command execution. (O) Check the specified device file name, and then retry.
KAQS11019-E	The specified differential-data snapshot name is already being used.	The specified differential-data snapshot name is already in use by another differential-data snapshot. You cannot specify it as the name of a new differential-data snapshot. (S) Cancels command execution. (O) Specify another differential-data snapshot name, and then re-execute the command.
KAQS11020-E	The operation on the file system cannot be executed because a failover occurred.	The operation on the file system cannot be executed because a failover occurred. (S) Cancels command execution. (O) Perform failback to bring the system back to the normal state, and then retry.

Message ID	Message	Description and Action
		<p>Details:</p> <p>You can also try again on the failover-destination node.</p>
KAQS11021-E	The number of differential-data snapshot definitions has reached the maximum.	<p>The maximum number of differential-data snapshots has already been created in the specified file system.</p> <p>(S)</p> <p>Cancels command execution.</p> <p>(O)</p> <p>Delete any unneeded differential-data snapshot from the file system, and then re-execute the command.</p>
KAQS11022-E	An internal error occurred. (maintenance information 1 = <i>maintenance-information-1</i> , maintenance information 2 = <i>maintenance-information-2</i> , maintenance information 3 = <i>maintenance-information-3</i> , maintenance information 4 = <i>maintenance-information-4</i> , maintenance information 5 = <i>maintenance-information-5</i> , maintenance information 6 = <i>maintenance-information-6</i>)	<p>An unexpected error occurred inside the system.</p> <p>(S)</p> <p>Cancels command execution.</p> <p>(O)</p> <p>Acquire all the log files, and then contact maintenance personnel. For a list of the file snapshot functionality log files, see online Help.</p>
KAQS11023-E	A file snapshot functionality or HFRR operation is already being executed on the specified file system. (file system name = <i>file-system-name</i>)	<p>A file snapshot functionality or HFRR operation is already being executed on the specified file system.</p> <p>(S)</p> <p>Cancels command execution.</p> <p>(O)</p> <p>Wait a while, and then re-execute the command.</p>
KAQS11024-E	A system error occurred. (function = <i>function-name</i> , return value = <i>return-value</i>)	<p>A system error occurred.</p> <p>(S)</p> <p>Cancels command execution.</p> <p>(O)</p> <p>Acquire all the log files, and then contact maintenance personnel. For a list of the file snapshot functionality log files, see online Help.</p>
KAQS11025-E	The differential-data snapshot is not unmounted.	<p>The differential-data snapshot created for the file system has not been unmounted.</p> <p>(S)</p> <p>Cancels command execution.</p> <p>(O)</p>

Message ID	Message	Description and Action
		Unmount the differential-data snapshot, and then re-execute the command.
KAQS11026-E	A device file smaller than the stipulated size exists in the specified device files, or the total capacity of the specified device files is insufficient as the required capacity of the differential-data storage device.	A device file smaller than the stipulated size exists in the specified device file(s), or the total size of the specified device file(s) is too small for the size of the differential-data storage device. (S) Cancels command execution. (O) Specify a device file that satisfies the differential-data storage device's setting conditions, and then re-execute the command.
KAQS11027-E	The specified differential-data snapshot is already mounted.	The specified differential-data snapshot is already mounted. (S) Cancels command execution. (O) Check the specified differential-data snapshot name, and then re-execute the command.
KAQS11028-E	An attempt to mount the specified differential-data snapshot or make it visible within the share has failed.	An error occurred in an attempt to mount the specified differential-data snapshot or make it visible within the share. (S) Cancels command execution. (O) Check the following items, remedy problems, and then re-execute. <ul style="list-style-type: none"> The statuses of the cluster, nodes, and resource groups, or of the virtual servers The capacity of the differential-data storage device is sufficient. If there is no problem regarding the above items, acquire all log data and contact maintenance personnel.
KAQS11030-E	The specified mount point does not exist.	The specified mount point does not exist. (S) Cancels command execution. (O)

Message ID	Message	Description and Action
		Check the specified mount point name, and then re-execute the command.
KAQS11031-E	The specified mount point is already in use by the file snapshot functionality.	The specified mount point is already in use by the file snapshot functionality. (S) Cancels command execution. (O) Check the specified mount point name, and then re-execute the command.
KAQS11032-E	The specified mount point is being used by another function.	The specified mount point is being used by another function. (S) Cancels command execution. (O) Check the specified mount point name, and then re-execute the command.
KAQS11033-E	An NFS share or a CIFS share was created for the differential-data snapshot mounted on the specified mount point.	An NFS share or a CIFS share is created in the differential-data snapshot mounted on the specified mount point. (S) Cancels command execution. (O) Release the NFS/CIFS share, and then re-execute the command.
KAQS11034-E	The specified mount point is not a file snapshot functionality target.	The specified mount point is not a file snapshot functionality target. (S) Cancels command execution. (O) Check the specified mount point name, and then re-execute the command.
KAQS11035-E	An attempt to unmount or hide the differential-data snapshot mounted on the specified mount point has failed.	An attempt to unmount or hide the differential-data snapshot mounted on the specified mount point has failed. This message might also be output when the cluster, nodes, resource groups, or virtual server are not running normally. (S) Cancels command execution. (O)

Message ID	Message	Description and Action
		Check the cluster, node, and resource group statuses or the virtual server status. If the statuses are normal and you still cannot identify the cause of the problem, acquire all the log data, and then contact maintenance personnel.
KAQS11038-E	The differential-data snapshot is not mounted on the specified mount point.	The differential-data snapshot is not mounted on the specified mount point. (S) Cancels command execution. (O) Check the specified mount point name, and then re-execute the command.
KAQS11040-E	No operation other than releasing the differential-data storage device can be executed, because an error occurred during setup or release processing for the differential-data storage device in the file system.	No operation other than releasing the differential-data storage device can be executed, because an error occurred during setup or release processing for the differential-data storage device in the file system. (S) Cancels command execution. (O) Specify the file system in which the error occurred, and then release the differential-data storage device. If the error occurs again, acquire all the log files, and then contact maintenance personnel. For a list of the file snapshot functionality log files, see online Help.
KAQS11041-E	No operation other than unmounting the differential-data snapshot in which an error occurred can be executed, because an error occurred during mount or unmount processing for the differential-data snapshot. (mount point name = <i>mount-point-name</i>)	No operation other than unmounting the differential-data snapshot in which an error occurred can be executed, because an error occurred during mount or unmount processing for the differential-data snapshot. (S) Cancels command execution. (O) Specify the mount point for the differential-data snapshot in which an error occurred, and then unmount the differential-data snapshot. If the error occurs again, acquire all the log files, and then contact maintenance personnel. For a list of the file snapshot functionality log files, see online Help.

Message ID	Message	Description and Action
KAQS11042-E	The specified file system name is being used as the mount point name of a differential-data snapshot.	The specified file system name is being used as the mount point name of a differential-data snapshot. (S) Cancels command execution. (O) Specify the correct file system name, and then re-execute the command.
KAQS11046-E	The capacity of the differential-data storage device is insufficient.	The capacity of the differential-data storage device is insufficient. (S) Cancels command execution. (O) Follow the recovery procedure provided in Help for handling a differential-data storage device that has insufficient capacity.
KAQS11049-I	No file systems exist that are using the file snapshot functionality.	No file systems exist that are using the file snapshot functionality. (S) None. (O) None.
KAQS11051-E	The limit on the number of differential-data storage devices that can be created in a node has been reached.	The number of differential-data storage devices has reached the maximum number of devices that can be created in the node. (S) Cancels command execution. (O) Release any unneeded differential-data storage devices, and then re-execute the command.
KAQS11052-E	The maximum number of logical volumes has been reached.	The maximum number of logical volumes has been reached. (S) Cancels command execution. (O) Delete any unnecessary file systems or release any unnecessary differential-data storage devices, and then retry the operation.
KAQS11053-E	An attempt at recovery processing has failed.	Recovery processing has failed. (S) Cancels command execution.

Message ID	Message	Description and Action
		(O) Acquire all the log files, and then contact maintenance personnel. For a list of the file snapshot functionality log files, see online help.
KAQS11055-E	The specified file system is not being used by the file snapshot functionality.	The specified file system is not being used by the file snapshot functionality. (S) Cancels command execution. (O) Specify the correct the file system name, and then re-execute the command.
KAQS11056-E	The specified differential-data snapshot does not exist.	The specified differential-data snapshot does not exist. (S) Cancels command execution. (O) Specify the correct differential-data snapshot name, and then re-execute the command.
KAQS11058-E	The specified file system is already in use by the file snapshot functionality.	The specified file system is already in use by the file snapshot functionality. (S) Cancels command execution. (O) Specify the correct file system name, and then re-execute the command.
KAQS11059-E	The specified file system was not created by using a volume manager.	The specified file system was not created by using a volume manager. (S) Cancels command execution. (O) Specify the correct file system name, and then re-execute the command.
KAQS11060-E	An attempt to set up a differential-data storage device has failed.	An attempt to set up a differential-data storage device has failed. (S) Cancels command execution. (O) Acquire all the log files, and then contact maintenance personnel. For a list of the file snapshot functionality log files, see online Help.

Message ID	Message	Description and Action
KAQS11061-E	An attempt to connect to a device file has failed.	An access error has occurred in the device file. (S) Cancels command execution. (O) Execute the <code>fpstatus</code> command on both nodes, check the connection statuses of the specified device files on both nodes, and then retry the operation. If you are using local data encryption, check the system messages on both nodes to see whether the KAQM05256-E message, or a message ranging from KAQM05258-E to KAQM05264-E was output during OS startup. If an error occurred, take action as described in the error message, and then retry the operation. If this error occurs again, follow the recovery procedure in online Help for when a device file access error occurs.
KAQS11062-E	An attempt to disconnect from a device file has failed.	An access error has occurred in the device file. (S) Cancels command execution. (O) Follow the recovery procedure written in the online help for when an access error occurs in a device file.
KAQS11063-E	The file system was not found.	The file system was not found. (S) Cancels command execution. (O) A failover might have occurred, or an error might have occurred in the device files that make up the file system or the different-data storage device. Look for the output message in the management log files to identify the cause of an error. If an error occurred even though a failover did not occur and an error did not occur in the device files, acquire all the log files, and then contact maintenance personnel. For a list of the file snapshot functionality log files, see online Help.
KAQS11064-E	The differential-data storage device was not found.	The differential-data storage device was not found.

Message ID	Message	Description and Action
		(S) Cancels command execution. (O) Check whether the differential-data storage device is enabled. If this error occurred even though the differential-data storage device is enabled, acquire all the log files, and then contact maintenance personnel. For a list of the file snapshot functionality log files, see online Help.
KAQS11065-E	An attempt to get the volume group information has failed.	An attempt to get the volume group information has failed. (S) Cancels command execution. (O) Acquire all the log files, and then contact maintenance personnel. For a list of the file snapshot functionality log files, see online Help.
KAQS11066-E	The differential-data storage device cannot be set up, because <i>function-name</i> is using the specified file system.	The differential-data storage device cannot be set up because another function is using the specified file system. (S) Cancels command execution. (O) Specify the correct file system name, and then re-execute the command.
KAQS11067-E	The total size of the specified device files is too large.	The total size of the specified device file is too large. (S) Cancels command execution. (O) Specify the correct size of the device file, and then re-execute the command.
KAQS11068-E	File snapshot functionality background processing is being executed for the specified file system.	File snapshot functionality background processing is being executed for the specified file system. (S) Cancels command execution. (O) Wait a while, and then re-execute the command.
KAQS11070-E	An error was detected while accessing the device file.	An error was detected while accessing the device file.

Message ID	Message	Description and Action
	(device file name = <i>device-file-name</i>)	(S) Cancels command execution. (O) Follow the recovery procedure written in the online help for when an access error occurs in a device file.
KAQS11071-E	Some of the resources to be used for the requested processing are being used by another user.	Some of the resources required for data-processing are being used exclusively by another user or the node that the user was using was stopped. (S) Cancels command execution. (O) Wait a while, and then re-execute the command. If the node stopped while it was processing data, wait for about 15 minutes or restart the node. Details: <i>See G. Actions for When a Timeout Occurs due to the Inability to Secure the Resources Used for Processing,</i> and follow the procedure that is listed.
KAQS11072-E	An error occurred in the cluster management LU, or access to the cluster management LU is being suppressed because a resource group was forcibly failed over.	An error occurred due to one of the following: - A failure occurred on the cluster management LU. - The cluster management LU is blocked. - The cluster management LU cannot be accessed because a resource group has been forcibly failed over. (S) Cancels command execution. (O) Contact maintenance personnel.
KAQS11073-E	The current directory is invalid.	The current directory is invalid. Possible causes are as follows: <ul style="list-style-type: none"> The current directory is located under <i>/mnt</i>. The current directory is set in a directory that does not exist. (S) Cancels command execution. (O) Change the current directory, and then re-execute.

Message ID	Message	Description and Action
KAQS11074-E	The limit on the number of file systems that can be registered in the system has been reached.	The limit on the number of file systems that can be registered in the system has been reached. (S) Cancels command execution. (O) Unmount a mounted differential-data snapshot or delete unnecessary file systems, and then re-execute the command.
KAQS11076-E	The specified number of differential-data snapshot reserved generations exceeds the maximum number of logical volumes.	The specified number of differential-data snapshot reserved generations exceeds the maximum number of logical volumes. (S) Cancels command execution. (O) Delete any unnecessary file systems, release any unnecessary differential-data storage devices, or specify a smaller number of reserved differential-data snapshots, and then retry the operation.
KAQS11077-I	File system processing is being performed, or an error has occurred.	Processing to set or release the differential-data storage device is running on the specified file system, or a running process was canceled. (S) Cancels command execution. (O) If processing to set or release the differential-data storage device is running, wait until the processing finishes, and then re-execute the command. If no such processing is running, release the differential-data storage device. If an error occurs, acquire all the log files, and contact maintenance personnel. For a list of the file snapshot functionality log files, see online Help.
KAQS11080-E	An error was detected while accessing the device file. (device file name = <i>device-file-name</i>)	An LU error occurred. (S) An error was detected while accessing the device file. (O) Follow the recovery procedure for when an access error occurs in the device file of the online help.

Message ID	Message	Description and Action
KAQS11082-E	The specified number of device files has exceeded the maximum.	<p>The specified number of device files has exceeded the maximum.</p> <p>(S) Cancels command execution.</p> <p>(O) Check the number of device files, and then retry.</p>
KAQS11083-E	An error has occurred in the logical volume of the file system or the differential-data storage device.	<p>An error has occurred in the logical volume of the file system or the differential-data storage device. This message might also be output when the cluster, nodes, resource groups, or virtual server are not running normally.</p> <p>(S) Cancels command execution.</p> <p>(O) Check the cluster, node, and resource group statuses or the virtual server status. If the statuses are normal and you still cannot identify the cause of the problem, follow the recovery procedure written in the online help for when an access error occurs in a device file.</p>
KAQS11085-E	An error has occurred in the logical volume of the file system or the differential-data storage device.	<p>An error has occurred in the logical volume of the file system or the differential-data storage device. This message might also be output when the cluster, nodes, resource groups, or virtual server are not running normally.</p> <p>(S) Cancels command execution.</p> <p>(O) Check the cluster, node, and resource group status or the virtual server status. If the statuses are normal and you still cannot identify the cause of the problem, follow the recovery procedure written in the online help for when an access error occurs in a device file.</p>
KAQS11086-E	A cluster, node, or resource group is not running normally.	<p>The differential-data snapshot functionality is unavailable because the cluster, nodes, or resource groups are not running normally.</p> <p>(S) Cancels command execution.</p> <p>(O)</p>

Message ID	Message	Description and Action
		Check the statuses of the cluster, nodes, and resource groups.
KAQS11088-I	Automatic creation has started.	Automatic creation has started. (S) None. (O) None.
KAQS11089-I	Automatic creation has finished.	Automatic creation has finished. (S) None. (O) None.
KAQS11090-E	Differential-data snapshots cannot be automatically created from now on because no license is set to allow use of basic functionality.	Subsequent automatic creation of differential-data snapshots cannot be performed because a basic functionality license is not set. (S) Cancels automatic creation. (O) Set a license for the basic functionality.
KAQS11091-E	An attempt to automatically create a differential-data snapshot has failed because of insufficient memory.	An attempt to automatically create a differential-data snapshot has failed because of insufficient memory. (S) Cancels automatic creation. (O) Do not perform another operation immediately before or after the automatic creation of a differential-data snapshot. If this error occurs again, acquire all the log data, and contact maintenance personnel. For a list of the file snapshot functionality log files, see online Help.
KAQS11092-E	An attempt to automatically create a differential-data snapshot has failed because of insufficient memory. (file system name = <i>file-system-name</i> , differential-data snapshot name = <i>differential-data-snapshot-name</i>)	An attempt to automatically create a differential-data snapshot has failed because of insufficient memory. (S) Cancels automatic creation of a differential-data snapshot for the target file system. (O) Do not perform another operation immediately before or after the automatic creation of a differential-data snapshot. If this error occurs

Message ID	Message	Description and Action
		again, acquire all the log data, and contact maintenance personnel. For a list of the file snapshot functionality log files, see online Help.
KAQS11094-E	An attempt to automatically create a differential-data snapshot has failed because an internal error occurred. (info1 = <i>error-information-1</i> , info2 = <i>error-information-2</i> , info3 = <i>error-information-3</i> , info4 = <i>error-information-4</i> , info5 = <i>error-information-5</i> , info6 = <i>error-information-6</i>)	A differential-data snapshot could not be created automatically because an unexpected error occurred inside the system. (S) Cancels automatic creation. (O) Acquire all the log files, and then contact maintenance personnel. For a list of the file snapshot functionality log files, see online Help.
KAQS11095-E	An attempt to automatically create a differential-data snapshot has failed because an internal error occurred. (S) Cancels processing. (O) Re-execute the processing to delete all differential-data snapshots created for

Message ID	Message	Description and Action
		the file system. If this error occurs repeatedly, acquire all the log data, and then contact maintenance personnel.
KAQS11282-E	During processing, the status of a cluster, node, or resource group changed.	A cluster, node, or resource group might not be running normally. (S) Cancels processing. (O) Check the cluster, node, and resource group status. If the statuses are normal and you still cannot identify the cause of the problem, acquire all the log data, and then contact maintenance personnel.
KAQS11286-E	An attempt to unmount the differential-data snapshot has failed. (mount point name = <i>mount-point-name</i>)	The cluster, nodes, resource groups, or virtual server might not be running normally, or an error has occurred. (S) Cancels processing. (O) Check the cluster, node, and resource group status. Alternatively, execute refresh processing, and then check the virtual server status. If the statuses are normal and you still cannot identify the cause of the problem, acquire all the log data, and then contact maintenance personnel.
KAQS11287-E	The file system is not mounted with write permissions.	A differential-data snapshot cannot be made visible within the share because the file system is not mounted with write permissions. (S) Cancels processing. (O) Mount the file system with write permissions, create a file share, and then try again.
KAQS11288-E	The file share has not been created in the file system, or the data to be made visible within the share does not exist in the differential-data snapshot.	A differential-data snapshot cannot be made visible within the share because the file share has not been created in the file system, or the data to be made visible within the share does not exist in the differential-data snapshot. (S) Cancels processing. (O)

Message ID	Message	Description and Action
		Check whether the file share has been created in the file system. If the file share has not been created in the file system, create it, and then try again.
KAQS11289-E	An attempt to create the directory for making the differential-data snapshot visible within the share has failed. (directory name = <i>directory-name</i>)	An attempt to create the directory for making the differential-data snapshot visible within the share has failed. Possible causes are as follows: (1) A file might have been created in the directory for making the differential-data snapshot visible within the share. (2) The file system capacity might be insufficient. (3) The file system might be blocked. (S) Cancels processing. (O) Execute refresh processing, and then check the status of the file system. If the file system capacity is insufficient, delete any unnecessary data, and then try again. If the file system has an error status, follow the relevant recovery procedure in Help. If the file system has no error status, delete the directory used to make the differential-data snapshot visible within the share, and then try again. If the error occurs again, acquire all log files, and then contact maintenance personnel. For a list of these log files, see the online help.
KAQS11290-E	A differential-data snapshot created in the same minute as the specified snapshot has already been made visible within the share. (mount point name of differential-data snapshot = <i>mount-point-name-of-differential-data-snapshot</i>)	A differential-data snapshot created in the same minute as the specified snapshot has already been made visible within the share. (S) Cancels processing. (O) Unmount the differential-data snapshot that was made visible within the share, and then try again.
KAQS11292-E	The differential-data snapshot is blocked. (file system name = <i>file-system-name</i>)	The differential-data snapshot is blocked. (S) Cancels processing. (O) Follow the relevant recovery procedure in Help when the differential-data snapshot is blocked.

Message ID	Message	Description and Action
KAQS11293-E	This operation cannot be performed because the specified file system is being used by HFRR. (file system name = <i>file-system-name</i>)	The displayed information is not up to date. The specified file system is being used by HFRR. (S) Cancels processing. (O) Execute refresh processing, and then check the status of the file system. Release the HFRR pair, and then retry the operation.
KAQS11294-E	This operation cannot be performed because the specified file system is an HFRR secondary file system and the corresponding HFRR pair is enabled. (file system name = <i>file-system-name</i>)	The specified file system is an HFRR secondary file system and the corresponding HFRR pair is enabled. (S) Cancels processing. (O) Disable or release the HFRR pair, and then retry the operation.
KAQS11295-E	Enabled schedules cannot be set up, because the specified file system is an HFRR secondary file system and the corresponding HFRR pair is enabled. (file system name = <i>file-system-name</i>)	The specified file system is an HFRR secondary file system and the corresponding HFRR pair is enabled. (S) Cancels processing. (O) Disable or release the HFRR pair, and then retry the operation. Alternatively, disable all new schedules, and then retry the operation.
KAQS11296-E	The operation cannot be performed on the differential-data snapshot because the snapshot is being used by HFRR.	The displayed information is not up to date. The differential-data snapshot is being used by HFRR. (S) Cancels processing. (O) Execute refresh processing, and then check the status of the differential-data snapshot. Specify a differential-data snapshot that is not being used by HFRR, and then retry the operation.
KAQS11297-E	The specified LU does not belong to the same storage system as the LUs that make up the file system.	The displayed information is not up-to-date. (S) Cancels processing. (O) Execute refresh processing, check the LUs, and then try again.

Message ID	Message	Description and Action
KAQS13050-E	The combination of the differential-data storage device size and the chunk size is invalid.	The combination of the differential-data storage device size and the chunk size is invalid. (S) Cancels command execution. (O) Check the differential-data storage device size and the chunk size, and then re-execute the command. If the file system is a tiered file system, check the differential-data storage device size for each tier.
KAQS13051-E	The specified size exceeds the free capacity of the user disk.	The specified size exceeds the free capacity of the user disk. (S) Cancels command execution. (O) Check the free capacity of the user disk, and then try again.
KAQS13052-E	The specified size cannot be used because it is lower than the current size of the differential-data storage device.	The specified size cannot be used because it is lower than the current size of the differential-data storage device. (S) Cancels command execution. (O) Check the differential-data storage device size, and then try again.
KAQS13053-E	The file system is blocked.	The file system is blocked. (S) Cancels command execution. (O) Follow the recovery procedure in online Help that explains what to do when a file system is blocked.
KAQS13054-E	An attempt to automatically create a differential-data snapshot failed because the file system is blocked. (file system name = <i>file-system-name</i> , differential-data snapshot name = <i>differential-data-snapshot-name</i>)	An attempt to automatically create a differential-data snapshot failed because the file system is blocked. (S) Stop the automatic creation of differential-data snapshots in the target file system. (O) Follow the recovery procedure in online Help that explains what to do when a file system is blocked.

Message ID	Message	Description and Action
KAQS13055-E	The specified device size is insufficient for the required capacity of the differential-data storage device.	The specified device size is insufficient for the required capacity of the differential-data storage device. (S) Cancels command execution. (O) Specify the device size to fill the condition to set the differential-data storage device size, and then try again.
KAQS13056-E	An attempt to restore a differential-data storage device failed.	An attempt to restore a differential-data storage device failed. (S) Cancels restoring a differential-data storage device. (O) Release the differential-data storage device size.
KAQS13057-E	An attempt to restore a differential-data storage device failed. (file system name = <i>file-system-name</i>)	An attempt to restore a differential-data storage device failed. (S) Cancels restoring a differential-data storage device. (O) Release the differential-data storage device which is set in the file system.
KAQS13058-E	Parameter information for the KAQS11194-E message is as follows: (file system name = <i>file-system-name</i> , directory name = <i>directory-name</i>)	When an attempt to create the directory for making differential-data snapshots visible within the share has failed, parameter information for the KAQS11194-E message is output. (S) None. (O) Take action according to the KAQS11194-E message.
KAQS13059-E	The operation cannot be performed on the specified file system because unused capacity on the virtual LU is currently being freed up.	Unused capacity is currently being freed up on the virtual LU containing the specified file system. (S) Cancels processing. (O) Confirm that the freeing up of unused capacity on the virtual LU is complete, and then retry the operation. If the problem persists, acquire all the log

Message ID	Message	Description and Action
		files, and then contact maintenance support.
KAQS13061-E	The combination of the file system size or the differential-data storage size, the maximum number of differential-data snapshot reserved generations, and the chunk size is invalid.	The combination of the file system size or the differential-data storage device size, the maximum number of differential-data snapshot reserved generations, and the chunk size is invalid. (S) Cancels the processing. (O) Check the file system size, the differential-data storage device size, the maximum number of differential-data snapshot reserved generations, and the chunk size, and then re-execute the command. If the file system is a tiered file system, check the file system size or the differential-data storage device size for each tier.
KAQS13062-E	The specified number of differential-data snapshot reserved generations is larger than the maximum number of differential-data snapshot reserved generations.	The specified number of differential-data snapshot reserved generations cannot be set. (S) Cancels the processing. (O) Specify a value that is equal to or less than the maximum number of differential-data snapshot reserved generations set for the differential-data storage device, and then re-execute the command.
KAQS13063-E	The <i>parameter-name</i> parameter cannot be specified for the tiered file system.	The specified file system is a tiered file system. (S) Cancels the processing. (O) Check the settings for the file system, and then re-execute the command.
KAQS13064-E	The specified option can be specified for only tiered file systems. (option = <i>option-name</i>)	The specified option can be specified for tiered file systems only. (S) Cancels the processing. (O) Check the settings for the file system, and then re-execute the command.

Message ID	Message	Description and Action
KAQS13065-E	The differential-data snapshot cannot be mounted because another file system exists for which the first 14 characters of the mount point name are the same.	The first 14 characters of a tiered file system name must be unique. (S) Cancels the processing. (O) Specify a mount point name for which the first 14 characters are unique, and then re-execute the command.
KAQS13066-E	The differential-data snapshot could not be automatically mounted because another file system exists for which the first 14 characters of the mount point name are the same. (file system name = <i>file-system-name</i> , differential-data snapshot name = <i>differential-data-snapshot-name</i> , mount point name = <i>mount-point-name</i>)	The first 14 characters of a tiered file system name must be unique. (S) Cancels automatic mounting of the differential-data snapshot for the target file system. (O) Specify the identifier used in the mount point name by using 4 characters or less, or specify one hour or more for the creation interval of automatic creation schedules.
KAQS13067-E	The creation of differential-data snapshots used for HFRR copies set for the file system has been disabled because an error occurred. (file system name = <i>file-system-name</i>)	The creation of differential-data snapshots used for HFRR copies set for the file system has been disabled because an error occurred. (S) Disables creation of differential-data snapshots used for HFRR copies set for the file system. (O) Check the entries output to <code>syncimage.log</code> right before this message to identify the cause of the error, and then take appropriate action.
KAQS13068-E	The differential-data storage device cannot be set up because the specified file system is too large.	The differential-data storage device cannot be set up because the specified file system is too large. (S) Cancels command execution. (O) Verify the file system size, and then retry the operation.
KAQS13069-E	The total of the following exceeds the maximum: the number of device files used in the file system, and the number of specified device files.	The total of the following exceeds the maximum: the number of device files used in the file system, and the number of specified device files. (S) Cancels command execution.

Message ID	Message	Description and Action
		(O) Check the number of device files in the file system and the specified number of device files, and then try again. For details on the maximum number of device files that make up the file system, see Help.
KAQS13070-E	If you add the specified device files, the total of the following will exceed the maximum: the number of device files used in the file system and the number of device files that make up the differential-data storage device.	If you add the specified device files, the total of the following will exceed the maximum: the number of device files used in the file system and the number of device files that make up the differential-data storage device. (S) Cancels command execution. (O) Check the number of device files in the file system and in the differential-data storage device, check the specified number of device files, and then try again. For details on the maximum number of device files that make up the file system, see Help.
KAQS13071-I	The operation to make the differential-data snapshots visible within the file share started. (resource group name = <i>resource-group-name</i>)	The operation to make the differential-data snapshots visible within the file share started. (S) None. (O) None.
KAQS13072-I	The operation to make the differential-data snapshots visible within the file share finished. (resource group name = <i>resource-group-name</i>)	The operation to make the differential-data snapshots visible within the file share finished. (S) None. (O) None.
KAQS13073-E	The operation to make the differential-data snapshots visible within the file share failed. (resource group name = <i>resource-group-name</i>)	The operation to make the differential-data snapshots visible within the file share failed. (S) Cancels processing. (O) See the syncimage.log output from immediately before this message was output. If the KAQS11194-E message or the KAQS11198-E message was output, take action according to the message. To try the failed operation

Message ID	Message	Description and Action
		again, identify the differential-data snapshots from the message and mount them again, or restart the resource groups. If no message was output, acquire all log data, and then contact maintenance personnel.
KAQS13074-I	The operation to make the differential-data snapshots visible within the file share started.	The operation to make the differential-data snapshots visible within the file share started. (S) None. (O) None.
KAQS13075-I	The operation to make the differential-data snapshots visible within the file share finished.	The operation to make the differential-data snapshots visible within the file share finished. (S) None. (O) None.
KAQS13076-E	The operation to make the differential-data snapshots visible within the file share failed.	The operation to make the differential-data snapshots visible within the file share failed. (S) Cancels processing. (O) See the syncimage.log output from immediately before this message was output. If the KAQS11194-E message or the KAQS11198-E message was output, take action according to the message. To try the failed operation again, identify the differential-data snapshots from the message and mount them again, or restart the resource groups or virtual servers. If no message was output, acquire all log data, and then contact maintenance personnel.
KAQS13077-E	On-demand mounting cannot be enabled because the automatically created differential-data snapshot is mounted.	On-demand mounting cannot be enabled because the automatically created differential-data snapshot is mounted. (S) Stop execution of this command. (O) Unmount the automatically created differential-data snapshot, and then re-execute the command.

Message ID	Message	Description and Action
KAQS13078-E	An attempt to unmount the differential-data snapshot to be mounted on demand failed.	The client might be accessing the differential-data snapshot. (S) Stop execution of this command. (O) Wait a while, and then re-execute the command. If this message is output repeatedly, acquire all log data, and then contact maintenance personnel.
KAQS13079-E	The automatically created differential-data snapshot cannot be mounted, because on-demand mounting is enabled.	The automatically created differential-data snapshot cannot be mounted, because on-demand mounting is enabled. (S) Stop execution of this command. (O) None.
KAQS13080-E	The most recent differential-data snapshot could not be automatically created because a timeout occurred in the processing to unmount the differential-data snapshot to be mounted on demand. (file system name = <i>file-system-name</i> , differential-data snapshot name = <i>differential-data-snapshot-name</i>)	The client might be accessing the differential-data snapshot. (S) Automatic creation of a differential-data snapshot in the target file system is canceled. (O) Do not perform another operation immediately before or after the automatic creation of a differential-data snapshot. If this message is output repeatedly, acquire all log data, and then contact maintenance personnel.
KAQS13081-E	An attempt to unmount the differential-data snapshot to be mounted on demand failed. (file system name = <i>file-system-name</i> , differential-data snapshot name = <i>differential-data-snapshot-name</i>)	The client might be accessing the differential-data snapshot. (S) Cancels processing. (O) Acquire all the log data, and then contact maintenance personnel.
KAQS13082-E	Processing of on-demand mounting failed because an internal error occurred. (info1 = <i>information-1</i> , info2 = <i>information-2</i> , info3 = <i>information-3</i> , info4 = <i>information-4</i> , info5 = <i>information-5</i> , info6 = <i>information-6</i>)	Configuration of on-demand mounting failed because an unexpected error occurred inside the system. (S) Cancels processing. (O) Acquire all the log data, and then contact maintenance personnel.

Message ID	Message	Description and Action
KAQS13083-E	This operation cannot be performed in the current system configuration.	This operation cannot be performed in the current system configuration. (S) Cancels processing. (O) None.
KAQS15000-I	Command name = <i>command-name</i> , Argument 1 = <i>argument-1</i> , Argument 2 = <i>argument-2</i> , Argument 3 = <i>argument-3</i> , Argument 4 = <i>argument-4</i> , Argument 5 = <i>argument-5</i> , Argument 6 = <i>argument-6</i> , Argument 7 = <i>argument-7</i> , Number of arguments = <i>number-of-arguments</i>	The message output the format for the command execution. (S) None. (O) None.
KAQS15608-E	The changing of file system information has failed. (return value = <i>command-return-value</i> , maintenance information 1 = <i>return-value</i>)	An error might have occurred in a File Services Manager function. (S) Cancels processing. (O) Wait a while, and then retry the operation. If the problem persists, acquire all the log files, and then contact maintenance personnel. For a list of the file snapshot functionality log files, see online Help.
KAQS15609-E	An attempt to set the usage status of a device file has failed. (return value = <i>command-return-value</i> , maintenance information 1 = <i>return-value</i>)	An error might have occurred in a File Services Manager function. (S) Cancels processing. (O) Wait a while, and then retry the operation. If the problem persists, acquire all the log files, and then contact maintenance personnel. For a list of the file snapshot functionality log files, see online Help.
KAQS15611-E	LU detach has failed. (return value = <i>command-return-value</i> , maintenance information 1 = <i>return-value</i>)	An error might have occurred in a File Services Manager function. (S) Cancels processing. (O) Wait a while, and then retry the operation. If the problem persists, acquire all the log files, and then contact maintenance personnel. For a

Message ID	Message	Description and Action
		list of the file snapshot functionality log files, see online Help.
KAQS15614-E	Delete of file system information has failed. (return value = <i>command-return-value</i> , maintenance information 1 = <i>return-value</i>)	An error might have occurred in a File Services Manager function. (S) Cancels processing. (O) Wait a while, and then retry the operation. If the problem persists, acquire all the log files, and then contact maintenance personnel. For a list of the file snapshot functionality log files, see online Help.
KAQS15615-I	Consistency processing for the file snapshot functionality started.	Consistency processing for the file snapshot functionality started. (S) None. (O) None.
KAQS15616-I	Consistency processing for the file snapshot functionality ended. (maintenance information 1 = <i>return-value</i>)	Consistency processing for the file snapshot functionality ended. (S) None. (O) None.
KAQS15617-E	An error occur during consistency processing for the file snapshot functionality. (file system = <i>file-system-name</i> , maintenance information 1 = <i>function-name</i> , maintenance information 2 = <i>return-value</i>)	An error occur during consistency processing for the file snapshot functionality. (S) Cancels processing. (O) Wait a while, and then retry the operation. If the error occurs repeatedly, acquire all the log files, and then contact maintenance personnel. For a list of the file snapshot functionality log files, see online Help.
KAQS15618-E	No license is set to allow use of basic functionality.	The file snapshots functionality cannot be used because a license has not been set for the basic functionality. (S) Cancels processing. (O) Set a license for the basic functionality.

Message ID	Message	Description and Action
KAQS15619-E	An attempt to acquire node information has failed.	An error might have occurred in an OS function. (S) Cancels processing. (O) Acquire all the log files, and then contact maintenance personnel. For a list of the file snapshot functionality log files, see online Help.
KAQS15900-I	The signal (<i>signal-number</i>) was caught.	The Ctrl+C keys or Ctrl+Break keys were pressed. (S) Cancels command execution. (O) None.
KAQS19000-E	The differential-data storage device has run out of space. All differential-data snapshots are invalid. (file system name = <i>file-system-name</i>)	All differential-data snapshots are invalid. (S) Stops storing data in the differential-data storage device, but continues to access the file system. (O) Follow the recovery procedure in Help that explains what to do when the capacity of the differential-data storage device becomes insufficient.
KAQS19001-W	The differential-data storage usage rate reached <i>usage-rate</i> percent or more. (file system name = <i>file-system-name</i>)	The usage rate of the differential-data storage device has reached the warning threshold. (S) None. (O) Either unmount any unneeded differential-data snapshots from the file system and delete them, or expand the differential-data storage device.
KAQS19002-E	The differential-data storage device has run out of space. The file system or differential-data snapshot is blocked. (file system name = <i>file-system-name</i>)	The file system or differential-data snapshot is blocked. (S) The system stops storing data in the differential-data storage device, and limits access to the file system and the differential-data snapshot. (O) Follow the recovery procedure in Help that explains what to do when the

		capacity of the differential-data storage device becomes insufficient.

KAQV Messages (Anti-Virus Enabler Messages)

This chapter describes the meanings of the KAQV messages by HDI systems (Anti-Virus Enabler messages).

- [KAQV messages](#)

KAQV messages

This section explains messages that have a message ID beginning with KAQV (Anti-Virus Enabler messages), and the actions to be taken if such messages occur.

Table 7-1 KAQV messages

Message ID	Message	Description and Action
KAQV00001-I	Anti-Virus Enabler was uninstalled.	Anti-Virus Enabler was uninstalled. (O) No action is required.
KAQV10001-E	An attempt to read the configuration file (<i>configuration-file</i>) has failed.	A problem may exist in the processing of the OS disk or the configuration file. (O) Check the settings and for problems in the OS disk. Acquire all the log files if there is no problem, and then inform maintenance personnel. See the help for a list of the log files.
KAQV10002-W	The scanner server (<i>server-name</i>) is blocked.	An error might have occurred in a scan server, or a problem might have occurred in communication processing. Also, scanning might not have completed due to a heavy load on the scan servers. (O) Check the status of the scan server and remove the cause of the error. If you cannot identify the cause, collect all the log files, and then contact maintenance personnel. See online Help for a list of the log files.
KAQV10003-I	The blocking of the server (<i>server-name</i>) was cancelled.	The state of a server became normal. (O) No action is required.
KAQV10004-E	The specified server (<i>server-name</i>) was not found.	The scanner server may not be running, or the server information may be invalid. (O) Check the server information. If the server information is correct, confirm that the scanner server is running, and then retry execution.
KAQV10005-E	An attempt to create a network socket has failed.	A problem may exist in the internal processing. (O) Acquire all the log files and inform maintenance personnel. See the help for a list of the log files.

Message ID	Message	Description and Action
KAQV10006-E	The server (<i>server-name</i>) cannot be connected.	The scanner server may not be running, or the server information may be invalid. (O) Check the server information. If the server information is correct, confirm that the scanner server is running, and then retry execution.
KAQV10007-E	A timeout occurred while the server (<i>server-name</i>) was being connected.	The scanner server may not be running, or the server information may be invalid. (O) Check the server information. If the server information is correct, confirm that the scanner server is running, and then retry execution.
KAQV10008-E	An error occurred during sending to the server (<i>server-name</i>).	A problem may exist in the network environment. (O) Execute the same processing again after waiting. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files.
KAQV10009-E	An attempt to receive a response from the server (<i>server-name</i>) has failed.	A problem may exist in the network traffic. (O) Execute the same processing again after waiting. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files.
KAQV10010-E	The status of the response data from the server (<i>server-name</i>) cannot be judged.	A problem may exist in the internal processing. (O) Acquire all the log files and inform maintenance personnel. See the help for a list of the log files.
KAQV10011-E	The server (<i>server-name</i>) responded with a timeout.	A problem may exist in the scanner server. (O) Remove the cause of the scanner server error, and then retry execution.
KAQV10012-E	The server (<i>server-name</i>) responded with an internal server error.	A problem may exist in the scanner server. (O)

Message ID	Message	Description and Action
		Remove the cause of the scanner server error, and then retry execution.
KAQV10013-E	The server (<i>server-name</i>) responded with the service unavailable or with an overload.	The processing is not possible because the service was stopped or there are too many scanning requests. (O) If the service is stopped, start the service. If there are many scanning requests, add a scanner server.
KAQV10014-E	The server (<i>server-name</i>) responded that the ICAP version is not supported.	The ICAP version is not supported. (O) Check the ICAP version.
KAQV10015-E	The server (<i>server-name</i>) responded that resources were unavailable.	A problem may exist in the scanner server. (O) Remove the cause of the scanner server error, and then retry execution.
KAQV10016-E	The server (<i>server-name</i>) responded with an unknown status.	A problem may exist in the internal processing. (O) Acquire all the log files and inform maintenance personnel. See the help for a list of the log files.
KAQV10018-W	No server has been registered.	No server has been registered. (O) Register the scanner server.
KAQV10019-E	All the scanner servers are blocked.	An error might have occurred in a scan server, or a problem might have occurred in communication processing. Also, scanning might not have completed due to a heavy load on the scan servers. (O) Check the status of all the scan servers and remove the cause of the error. If you cannot identify the cause, collect all the log files, and then contact maintenance personnel. See online Help for a list of the log files.
KAQV10020-W	All the attempts to retry connection with the server have failed.	A problem may exist in the network environment. (O) Execute the same processing again after waiting. Acquire all the log files if the error occurs when you execute again, and then inform maintenance

Message ID	Message	Description and Action
		personnel. See the help for a list of the log files.
KAQV10022-E	A virus infected file was detected. (<i>virus-information</i>)	A virus infected file was detected. (O) Prevent the virus from infecting the system. In addition, investigate the cause of the infection, such as by pinpointing the source of the infection. If required, take measures for preventing the virus from further infecting the system; for example, temporarily stop users from using the system, or stop the system.
KAQV10023-W	A virus infected file was deleted. (<i>virus-information</i>)	A file was deleted because the file was detected to have been infected with a virus. (O) If necessary, notify the client that the file has been deleted.
KAQV10024-W	A virus infected file was repaired. (<i>virus-information</i>)	A file was repaired because the file was detected to have been infected with a virus. (O) If necessary, notify the client that the file has been restored.
KAQV10025-E	An attempt to make a temporary file failed. (file name= <i>file-name</i>)	The disk does not have the available space required to output the temporary file, or a problem may exist in the internal processing. (O) Execute the same processing again after increasing the available disk space. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files. Supplementary note: This message is sometimes output when there is a problem with a file system or an LU. Check the status of the file system or LU, check for any SNMP notification messages or email notifications, and if there is a problem, take action according to the instructions in online Help.
KAQV10026-E	An attempt to remove a temporary file failed. (file name= <i>file-name</i>)	A problem may exist in the OS disk or in the internal processing. (O)

Message ID	Message	Description and Action
		Delete the files that could not be deleted. Acquire all the log files if this error message continues to be output, and then inform maintenance personnel. See the help for a list of the log files.
KAQV10027-W	A file that cannot be scanned was detected. (<i>detailed-information</i>)	A file to be scanned cannot be scanned because of the scanner server settings. (O) Check the scanner server settings.
KAQV10028-W	The file was deleted. (<i>cause=the-cause-of-why-the-file-was-deleted, user = user-name(user-id). IP address = IP-address-of-the-client-that-was-using-the-file. File Path = file-name.</i>)	A file to be scanned cannot be scanned because of virus scanning has failed or the settings of the Scan Conditions. (O) If necessary, notify the client that the file has been deleted. Also, check the status of the scan server and the scan-condition settings.
KAQV10029-W	The file was not updated. (<i>cause=the-cause-of-why-the-file-could-not-be-updated, detailed-information</i>)	Either the file had a virus, or it could not be scanned because the virus scan failed or the scan-condition settings were not properly set. (O) If necessary, notify the client that the file has been updated. Also, if the reason the file was not scanned is something other than a virus, then check the status of the scan server and the scan-condition settings.
KAQV10030-W	The versions of the scan software installed on the registered scanner servers are different.	The versions of the scan software installed on the registered scanner servers are different. (O) Upgrade the scan software so that the versions of the software installed on the scanner servers are the same.
KAQV10031-W	The versions of the virus definition files used on the registered scanner servers are different.	The versions of the virus definition files used on the registered scanner servers are different. (O) Upgrade the virus definition files to the latest versions so that the versions on the scanner servers are the same. If you use an older version of a virus definition file, the scanner server might not be able to detect a virus.
KAQV10032-W	Virus scanning has not finished. (<i>cause = cause-of-virus-scanning-interruption,</i>	Virus scanning was interrupted. (O)

Message ID	Message	Description and Action
	file name = <i>path-of-file-that-was-being-scanned</i>)	<p>Virus scanning has not finished. Rescan the files in which an error occurred.</p> <p>Revise the setting as follows, depending on the cause.</p> <p>If the scan size was exceeded:</p> <p style="padding-left: 40px;">Increase the maximum scan size or register the files as scan-exception files.</p> <p>If a scan timeout occurred:</p> <p style="padding-left: 40px;">If the files for which scanning failed are large, a timeout might occur. Increase the timeout period, or register the files as scan-exception files.</p> <p>If an internal error occurred:</p> <p style="padding-left: 40px;">Retry the operation. If an error occurs again, acquire all the log files, and then contact maintenance personnel. See online Help for a list of the log files.</p> <p>If the server was busy:</p> <p style="padding-left: 40px;">Retry the operation. If the problem persists, add another scan server.</p> <p>If a server error occurred:</p> <p style="padding-left: 40px;">Check the status of all the scan servers, and remove the cause of the error.</p>
KAQV10034-W	New information has been reported to the report information file about a file for which virus scanning has not finished.	<p>New information has been reported to the report information file about a file for which virus scanning has not finished.</p> <p>(O)</p> <p>See the report information file and, if necessary, re-execute virus scanning for the file for which virus scanning has not finished.</p>
KAQV10036-E	A server (<i>server-name</i>) is busy.	<p>Because there are too many scan requests, the scan server could not perform processing.</p> <p>(O)</p> <p>Re-execute the virus scan. If this message is repeatedly output, add another scan server.</p>
KAQV20001-I	The server monitoring daemon was started.	<p>Real-time scanning was started.</p> <p>(O)</p> <p>No action is required.</p>

Message ID	Message	Description and Action
KAQV20002-E	An attempt to start the server monitoring daemon failed.	A problem may exist in the OS disk or in the internal processing. (O) Execute the same processing again after waiting. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files.
KAQV20003-I	The server monitoring daemon will now end.	Real-time scanning was stopped. (O) No action is required.
KAQV20004-I	Shared memory (<i>shared-memory-key</i>) was allocated.	Shared memory was allocated. (O) No action is required.
KAQV20005-E	An attempt to allocate shared memory (<i>shared-memory-key</i>) has failed.	A problem may exist in the OS disk or in the internal processing. (O) Execute the same processing again after waiting. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files.
KAQV20006-I	The shared memory (<i>shared-memory-key</i>) was discarded.	Shared memory was removed. (O) No action is required.
KAQV20008-W	An attempt to create a system resource (<i>semaphore-key</i>) has failed.	The upper limit for resources might have been reached. (O) No action is required because a system resource is automatically re-created. If this message appears repeatedly, acquire all the log files, and then contact maintenance personnel. For a list of the log files, see the online Help.
KAQV30001-E	An attempt to read the configuration file (<i>nasav.conf</i>) has failed.	A problem may exist in the processing of the OS disk or the configuration file. (O) Check the settings and for problems in the OS disk. Acquire all the log files if there is no problem, and then inform maintenance personnel. See the help for a list of the log files.
KAQV30002-E	An attempt to write to the configuration file (<i>nasav.conf</i>) has failed.	This may be in use by another user. (O)

Message ID	Message	Description and Action
		Retry execution. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files.
KAQV30003-E	An attempt to read the HTML file has failed.	An attempt to install the program may have failed. (O) Execute the re-installation again. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files.
KAQV30006-E	No license has been specified for the system.	The license may have been invalidated or canceled. (O) Specify the license, and then retry. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files.
KAQV30007-E	The data entered in the window for changing the scanner server is invalid.	The entered server address or port number is invalid. (O) Return to the front window and enter valid data. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files.
KAQV30008-E	The entered server address is duplicated.	Registration is not possible because the server address is already registered. (O) Return to the List of Scanner Servers window and check the contents of the server. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files.
KAQV30009-E	The change of the scanning conditions was not reported to the real-time scanning function.	There is a possibility that another user might have stopped the real-time scanning. (O) Return to the List of Scanner Servers window and check the status of the real-time scanning. If the error occurs again, acquire all the operation log

Message ID	Message	Description and Action
		files, and inform maintenance personnel. See the help for a list of the operation log files.
KAQV30010-W	Real-time scanning has already started.	Real-time scanning has already started. (O) Return to the List of Scanner Servers window and check the status of the real-time scanning. If the error occurs again, acquire all the operation log files, and inform maintenance personnel. See the help for a list of the operation log files.
KAQV30011-W	Real-time scanning has already stopped.	Real-time scanning has already stopped. (O) Return to the List of Scanner Servers window and check the status of the real-time scanning. If the error occurs again, acquire all the operation log files, and inform maintenance personnel. See the help for a list of the operation log files.
KAQV30012-E	Real-time scanning could not start.	An attempt to start real-time scanning has failed. (O) Retry execution. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files.
KAQV30013-E	Real-time scanning could not be stopped.	An attempt to stop real-time scanning has failed. (O) Retry execution. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files.
KAQV30014-E	The Anti-Virus Enabler information cannot be registered in the system file (crontab).	This may be in use by another user. (O) Retry execution. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files.
KAQV30015-E	The Anti-Virus Enabler information cannot be deleted from the system file (crontab).	This may be in use by another user. (O)

Message ID	Message	Description and Action
		Retry execution. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files.
KAQV30016-E	An attempt to change the symbolic link has failed.	An attempt to install the program may have failed. (O) Execute the re-installation again. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files.
KAQV30018-E	The server information is already updated.	Other users may already have updated the server information. (O) Return to the List of Scanner Servers window and check the contents of the server. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files.
KAQV30019-E	Rollback processing failed.	This may be in use by another user. (O) Retry execution. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files.
KAQV30020-W	The server for setup has already been deleted.	The server may have already been deleted by another user. (O) Return to the List of Scanner Servers window and check the contents of the server. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files.
KAQV30021-E	Execution cannot start because the server is not registered.	No server has been registered. (O) Return to the List of Scanner Servers window and check the contents of the server. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files.

Message ID	Message	Description and Action
KAQV30022-E	An attempt to acquire the server status has failed.	A problem may exist in the internal processing. (O) Re-install File Services Manager and Execute the re-installation again. Acquire all the Management log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the Management log files.
KAQV30023-I	The system license will expire in <i>remaining-license-days</i> days.	The expiration date of the license is imminent. (O) Acquire a license, and then execute the setting of the license.
KAQV30024-E	An attempt to acquire the server status has failed.	A problem may exist in the internal processing. (O) Acquire all the log files and inform maintenance personnel. See the help for a list of the log files.
KAQV30025-E	The scanner server could not be registered.	32 sets of scanner servers are already registered. (O) Delete the already registered scanner server, and then register the new scanner server.
KAQV30026-W	The contents of the server setup are invalid.	The settings file may have been updated by accident. (O) Correct the information of the registered server.
KAQV30027-W	An error exists in the contents of the configuration file.	The configuration file may have been updated by accident. (O) Check the contents of the Scan Conditions window. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files.
KAQV30028-E	A device error occurred.	A device error occurred. (O) Contact maintenance personnel.
KAQV30029-E	Other users might be occupying some of the	Other users might be occupying some of the resources used for the

Message ID	Message	Description and Action
	resources used for the processing.	processing, or an exclusively used node has been stopped. (O) Wait a while, and then retry. If the node stops during processing, wait about 15 minutes or boot the stopped node. If the error occurs again, inform maintenance personnel.
KAQV30032-E	All scanner servers cannot be deleted if real-time scanning is enabled.	An attempt to delete all scanner servers was performed while real-time scanning was enabled. (O) If you do not want to perform virus scanning, disable real-time scanning, and then try again. If you want to perform virus scanning, register another scanner server, and then specify the server that you want to delete.
KAQV30050-E	An internal error occurred.	A system error might have occurred. (O) Retry execution. Acquire all the log files if the error occurs when you execute again, and then inform maintenance personnel. See the help for a list of the log files.
KAQV30051-E	A syntax error exists in the parameter (<i>specified-parameter</i>).	A syntax error exists in the specified parameter. (O) Specify valid syntax according to the help.
KAQV30053-I	Usage: <i>usage</i>	This message displays the format of the command. (O) If a syntax error occurs, check the format of the command, and then retry.
KAQV30054-E	There are too many or too few parameters.	There are too many or too few parameters. (O) Check the format of the command, and retry specifying a suitable parameter.
KAQV30056-E	The specified information (<i>input-value</i>) is invalid.	An invalid character was entered, or a value that exceeds the maximum number of characters was entered. (O)

Message ID	Message	Description and Action
		Enter a value that is suitable according to Help.
KAQV30057-E	An attempt to register an item failed, because the number of registered items has reached the maximum. (item = <i>item-name</i>)	The number of registered items has reached the maximum. (O) Delete any unnecessary registered items, and then try again.
KAQV30058-E	An error occurred during file operations.	A conflict with another operation might have occurred. (O) Retry the operation. If an error occurs again, acquire all the log files, and then contact maintenance personnel. See Help for a list of the log files.
KAQV30059-I	" <i>user-entered-key-of-information-that-user-wants-to-delete-or-view</i> " has not been set.	The specified value has already been deleted by another user or virus scan settings have not been set. (O) None.
KAQV30060-E	You cannot delete the entry " <i>input-value</i> " from the settings file.	An entry that cannot be deleted was specified. (O) None.
KAQV30061-E	Another user is currently updating the settings.	Another user is currently updating the settings. (O) Wait until the other user finishes updating the settings, and then try again. If the error still occurs, collect all the log files, and then contact maintenance personnel. For details about the log files, see online Help.
KAQV30062-E	At least one file extension to be scanned must be specified.	At least one file extension to be scanned must be specified. (O) If you do not want files that have a specific extension to be scanned, specify the scanning settings to exclude that extension. If you do not want to perform virus scanning, disable real-time scanning.
KAQV30063-Q	Are you sure you want to delete " <i>specified-value</i> " from <i>extension</i> ? (y/n)	(O) If you want to proceed, enter y. If you do not want to proceed, enter n.
KAQV30064-Q	" <i>entered-value</i> " will be deleted from the scan-excluded paths. Is this OK? (y/n)	(O)

Message ID	Message	Description and Action
		If you want to continue the processing, enter y. If you want to cancel the processing, enter n.
KAQV30065-Q	All the registered scan-excluded paths will be deleted. Is this OK? (y/n)	(O) If you want to continue the processing, enter y. If you want to cancel the processing, enter n.
KAQV30066-E	The scanning software settings cannot be changed while real-time scanning is enabled.	The scanning software settings cannot be changed while real-time scanning is enabled. (O) Disable real-time scanning and retry the operation.
KAQV30067-E	The current scanning software does not support the selected setting (<i>setting-item</i>).	The selected setting is not supported by the scanning software in use. (O) Check the scanning software settings. If necessary, change the settings, and then retry the operation.
KAQV30071-I	To finish enabling real-time scanning, restart the CIFS service.	The real-time scan setting was enabled. (O) Restart the CIFS service.
KAQV30072-Q	If a different scanning software is chosen, the scan conditions will be re-initialized and the scan server information will be deleted. Are you sure you want to change the scanning software? (y/n)	(O) Enter "y" to proceed, or "n" to cancel.
KAQV30073-E	No scanning software is configured.	No scanning software is configured. (O) Configure the scanning software and retry the operation.
KAQV30075-I	The specified scanning software settings have not been applied to the other node. Apply the same scanning software settings to both nodes in the cluster.	Scanning software was set. (O) No action is required.
KAQV30076-Q	Are you sure you want to delete the scan server <i>scan-server</i> ? (y/n)	(O) Enter "y" to proceed, or "n" to cancel.
KAQV30077-Q	Are you sure you want to delete all registered scan servers? (y/n)	(O) Enter "y" to proceed, or "n" to cancel.

Message ID	Message	Description and Action
KAQV30078-E	The format of the specified IP address is invalid.(specified value = <i>IP-address</i>)	The format of the specified IP address is invalid. (O) Please verify the format and retry the operation.
KAQV30079-E	The specified IP address cannot be set.(specified value = <i>IP-address</i>)	The specified IP address is a special address that cannot be set. (O) Check the specified value, and then retry the operation.
KAQV30080-E	The server cannot be modified because it is being removed.	A server that cannot be modified was specified. (O) Instead of editing a server that is in the process of being deleted, add a new server using the server settings you wanted to enter.
KAQV30081-E	The same value was specified multiple times. (specified value = <i>specified-value</i>)	The same value was specified multiple times. (O) Do not specify the same value multiple times, and then retry the operation.
KAQV40001-E	This OS is not supported.	An unsupported OS was installed. (O) Refer to the product documentation for the list of supported Operating Systems.
KAQV40002-E	An I/O error occurred.	An error occurred during I/O processing. A user without Administrator permissions might have attempted the operation. (O) Login with Administrator permissions. If the problem persists, download the Hitachi Server Protect Agent Manager log files, and contact Product Support.
KAQV40003-E	An internal error occurred.	A system error has occurred. (O) Retry the operation. If the problem persists, download the Hitachi Server Protect Agent Manager log files, and contact Product Support.
KAQV40004-W	The user name is already registered for the specified node.	The user name cannot be registered if the user name is already registered on the node. (O)

Message ID	Message	Description and Action
		Only one user can be registered per node. To re-register a user name, delete the registered information, and then retry the operation.
KAQV40005-E	The service is not registered.	The installation of the service failed. (O) Please reinstall the service again, and retry the operation.
KAQV40006-E	The default settings were loaded because the configuration file is invalid.	The settings could not be acquired because the configuration file is invalid. (O) Retry the operation. If the problem persists, download the Hitachi Server Protect Agent Manager log files, and then contact Product Support.
KAQV40007-E	The IP address of node (<i>node-name</i>) could not be acquired.	An error occurred during name resolution. (O) Confirm that name resolution can be performed using nslookup, and retry the operation if necessary.
KAQV40009-E	The configuration file could not be saved.	There might not be enough unused capacity on the installation-destination disk. (O) Check the unused capacity on the installation-destination disk, and then retry the operation. If the problem persists, acquire the Hitachi Server Protect Agent Manager log files, and then contact maintenance personnel.
KAQV40010-E	The settings could not be applied to the configuration file.	There is not enough available capacity on the installation-destination disk. (O) Check the available capacity on the installation-destination disk, and retry the operation. If the problem persists, download the Hitachi Server Protect Agent Manager log files, and then contact Product Support.
KAQV40011-E	The temporary file could not be deleted. (file = <i>path-of-temporary-file</i>)	An error occurred during deletion of the temporary file. (O) Please manually delete the temporary file.

Message ID	Message	Description and Action
KAQV40012-E	The service could not start because the configuration file does not exist.	The service cannot start because the configuration file does not exist. (O) Set the information in Hitachi Server Protect Agent Manager, and then start the service.
KAQV40013-E	An error occurred during service startup. (cause = <i>cause</i>)	An error prevented the service from starting up. (O) Retry the operation. If the problem persists, download the Hitachi Server Protect Agent Manager log files, and then contact Product Support.
KAQV40014-E	The node could not connect to a network resource. (node = <i>IP-address</i> , cause = <i>Windows-error-code</i>)	An error occurred while connecting to a network resource. (O) Please refer to the settings, and modify the settings.
KAQV40015-E	An error occurred during network processing. (cause = <i>Windows-error-code</i>)	An error occurred during network processing. (O) Retry the operation. If the problem persists, download the Hitachi Server Protect Agent Manager log files, and then contact Product Support.
KAQV40016-E	A file was detected that might contain a virus. (node = <i>IP-address-of-node</i> , file = <i>path-of-file</i> , IP address = <i>IP-address-of-client</i> , user name = <i>user-name-of-client</i>)	The scanning software might have denied access to the file. (O) View the scanning software logs to confirm whether the file is infected. If the file is infected, stop it from infecting other files. Also, investigate the cause of the infection. If necessary, prevent user access to the file or stop the system to prevent the spreading of the virus.
KAQV40017-I	The service started.	The service started. (O) No action is required.
KAQV40018-I	The service stopped.	The service stopped. (O) No action is required.
KAQV40019-Q	The settings have not been applied. Are you sure you want to stop the process?	(O) Click "OK" to stop the process or "Cancel" to cancel.

Message ID	Message	Description and Action
KAQV40020-W	Information cannot be added because the maximum number of users has been reached.	The maximum number of users has been reached. (O) Delete at least one user before retrying the operation.
KAQV40021-E	The service cannot start because the settings cannot be acquired.	The settings cannot be acquired. (O) Retry the operation. If the problem persists, download the Hitachi Server Protect Agent Manager log files, and then contact Product Support.
KAQV40022-E	The service could not be started because the configuration file is corrupted.	An integrity check detected corruption in the configuration file. (O) Set the information in Hitachi Server Protect Agent Manager, and then start the service.
KAQV40023-E	A notification about changed settings could not be reported to the running service.	An error occurred during processing to report changed settings. (O) Restart the Hitachi Server Protect Agent service.
KAQV40024-E	The service failed to start.	An error occurred during the service start. (O) Start the Hitachi Server Protect Agent service.
KAQV40025-E	Notification of changed settings could not be generated because the service is starting.	The service is starting. (O) Restart the Hitachi Server Protect Agent service.
KAQV40026-E	The service could not start because it was stopping.	The service is stopping. (O) Stop the Hitachi Server Protect Agent service, and then start the service.
KAQV40027-E	The specified IP address cannot be set.	The specified IP address is a special address that cannot be set. (O) Check the specified value, and retry the operation

Error Messages Output by Hitachi Command Suite Common Component

This appendix lists and describes the error messages output by the Hitachi Command Suite Common Component.

Error Messages Output by Hitachi Command Suite Common Component

An error message consists of a message ID and the message text (error message text). The format is as follows:

- Format:
 - KAPMmmmmm-z message-text* (see [Table A-1 KAPM00000 - KAPM09999 \(messages output by Hitachi Command Suite Common Component\) on page A-2](#), [Table A-2 KAPM10000 - KAPM19999 \(messages output by Hitachi Command Suite Common Component\) on page A-293](#), [Table A-3 KAPM40000 - KAPM49999 \(Messages Output by Hitachi Command Suite Common Component\) on page A-417](#))
 - KDJEmmmmm-z message-text* (see [Table A-4 KDJE40000 - KDJE49999 \(Messages Output by Hitachi Command Suite Common Component\) on page A-417](#))

mmmmm is a message number, and *z* is one of the following message levels:

 - I: Information
 - W: Warning
 - E: Error
- Output destination:
 - Output level 0
 - The error message is output to syslog or the event log, integrated trace, and original log trace.
 - Output level 10, 20, 30
 - The error message is output to the original log trace.

Some of the error messages might be output to the integrated log trace for UNIX.

Tables list the Hitachi Command Suite Common Component error messages, and provide recommended actions for resolving the error conditions. If the problem cannot be solved, collect maintenance information, and then contact the Support Center.

Table A-1 KAPM00000 - KAPM09999 (messages output by Hitachi Command Suite Common Component)

Message ID	Message Text	Description
KAPM00001-E	ID= <i>aa...aa</i> ,LogTraceLibrary error. Trace START failed. <i>bb...bb</i> <i>aa...aa</i> : ID of the program using the log <i>bb...bb</i> : Error message output by the log trace library when	An attempt to start the log trace has failed. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.

Message ID	Message Text	Description
	the system failed to start the trace	
KAPM00002-E	ID= <i>aa...aa</i> ,LogtraceLibrary error. Trace STOP failed. <i>bb...bb</i> <i>aa...aa</i> : ID of the program using the log <i>bb...bb</i> : Error message output by the log trace library when the system failed to stop the trace	An attempt to stop the log trace has failed. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00003-W	ID= <i>aa...aa</i> ,Trace output error. <i>aa...aa</i> : ID of the program using the log	An attempt to output the log trace has failed. Check whether the log file is read only.
KAPM00004-W	ID= <i>aa...aa</i> ,Integrated trace output error. <i>aa...aa</i> : ID of the program using the log	An attempt to output an integrated log trace has failed. Check whether the Hitachi Network Objectplaza Trace Monitor 2 service is running.
KAPM00005-E	File I/O failed. (filename= <i>aa...aa</i>). <i>aa...aa</i> : Name of the version file	An attempt to create a version file has failed. Check whether the version file specified for <i>aa...aa</i> can be written.
KAPM00006-E	ID= <i>aa...aa</i> ,Invalid eventlog source. Eventlog's config not found in the registry(source name="HiCommand Log") <i>aa...aa</i> : ID of the program using the log	The registry for Eventlog was not found. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00011-E	ID= <i>aa...aa</i> ,Versionfile name is null. <i>aa...aa</i> : ID of the program using the log	The version file name has not been specified. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00012-E	ID= <i>aa...aa</i> ,PP version is null. <i>aa...aa</i> : ID of the program using the log	The version of each PP has not been specified. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00013-E	ID= <i>aa...aa</i> ,Trace log file name is null.	The name of the individual log trace has not been specified. To determine the cause and resolve the problem, detailed investigation is

Message ID	Message Text	Description
	<i>aa...aa</i> : ID of the program using the log	required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00014-E	ID= <i>aa...aa</i> ,Class name is null. <i>aa...aa</i> : ID of the program using the log	The class name of the program to be used to output the log has not been specified. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00015-E	ID= <i>aa...aa</i> ,Kind of Event is null. <i>aa...aa</i> : ID of the program using the log	The value that indicates the type of message event for output has not been specified. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00016-E	ID= <i>aa...aa</i> ,Message-ID is null. <i>aa...aa</i> : ID of the program using the log	The message ID for the message to be output has not been specified. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00017-E	<i>aa...aa</i> <i>aa...aa</i> : NullPointerException message	A NullPointerException occurred in LogTraceManager. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00018-E	<i>aa...aa</i> <i>aa...aa</i> : Exception message	An unexpected exception occurred in LogTraceManager. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00019-E	ID= <i>aa...aa</i> ,SyslogID size error:idEnt= <i>bb...bb</i> <i>aa...aa</i> : ID of the program using the log <i>bb...bb</i> : Eventlog ID	The ID (<i>bb...bb</i>) length attached to Eventlog is too long. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00020-E	ID= <i>aa...aa</i> ,Invalid version length:version= <i>bb...bb</i>	The version character string is too long.

Message ID	Message Text	Description
	<i>aa...aa</i> : ID of the program using the log <i>bb...bb</i> : Version character string	To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00021-E	ID= <i>aa...aa</i> ,Invalid log file number:logNum= <i>bb...bb</i> <i>aa...aa</i> : ID of the program using the log <i>bb...bb</i> : Number of individual log trace files	The number of individual log trace files is invalid. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00022-E	ID= <i>aa...aa</i> ,Invalid log file size:logSize= <i>bb...bb</i> <i>aa...aa</i> : ID of the program using the log <i>bb...bb</i> : File size of the individual log trace	The size of an individual log trace file is invalid. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00023-E	ID= <i>aa...aa</i> ,Invalid message type:kind= <i>bb...bb</i> <i>aa...aa</i> : ID of the program using the log <i>bb...bb</i> : Message type	A value indicating the message type is invalid. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00024-E	ID= <i>aa...aa</i> ,Invalid output level:level= <i>bb...bb</i> <i>aa...aa</i> : ID of the program using the log <i>bb...bb</i> : Output level	An invalid log output level exists in the code. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00025-E	The value of the encoding setting <i>bb...bb</i> of the unique log output of <i>aa...aa</i> is invalid. <i>aa...aa</i> : Program name request to output log <i>bb...bb</i> : Encoding	The value of the encoding setting <i>bb...bb</i> of the unique log output of <i>aa...aa</i> is invalid. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00090-I	The SSO server started successfully.	The SSO server started successfully.
KAPM00091-E	An attempt to start the SSO server has failed.	An attempt to start the SSO server has failed. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.

Message ID	Message Text	Description
KAPM00092-I	The SSO server was stopped successfully.	The SSO server was stopped successfully.
KAPM00101-E	An authentication error occurred.	An authentication error occurred. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00102-E	An error occurred during DBMS access processing.	An error occurred during DBMS access processing. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00103-E	The DBMS is not running.	The DBMS is not running. Make sure the DBMS has started.
KAPM00104-E	The product name is not specified.	The product name is not specified. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00105-E	An unexpected value was returned from the integrated authentication server. (aa...aa) aa...aa: Unexpected return value	An unexpected value was returned from the integrated authentication server. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00106-E	An attempt to update the authentication data has failed.	An attempt to update the authentication data has failed. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00107-E	An attempt to delete the authentication data has failed.	An attempt to delete the authentication data has failed. Retry execution. If the problem cannot be resolved, detailed investigation is required to determine the cause and resolve the problem. Contact the customer support, who may ask you to collect troubleshooting information.
KAPM00108-E	An attempt to print the authentication data has failed.	An attempt to print the authentication data has failed.

Message ID	Message Text	Description
		Retry execution. If the problem cannot be resolved, detailed investigation is required to determine the cause and resolve the problem. Contact the customer support, who may ask you to collect troubleshooting information.
KAPM00110-E	The HSSOContext value is invalid.	The HSSOContext value is invalid. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00111-I	The authentication data was successfully updated.	The authentication data was successfully updated.
KAPM00112-I	The authentication data was successfully deleted. (<i>aa...aa</i>) <i>aa...aa</i> : Product name	The authentication data was successfully deleted.
KAPM00113-I	The authentication data is already deleted. (<i>aa...aa</i>) <i>aa...aa</i> : Product name	The authentication data is already deleted.
KAPM00114-I	The authentication data was successfully displayed.	The authentication data was successfully displayed.
KAPM00115-E	An attempt to communicate with the SSO server has failed.	An attempt to communicate with the SSO server has failed. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00116-E	An attempt to update authentication data has failed.	This message is displayed when an attempt to update authentication data fails. Please restart the Single Sign On server.
KAPM00117-E	The RD area of HBase is blocked.	The RD area of HBase is blocked. Remove the cause of the HiRDB blockage, and then try again.
KAPM00119-E	Deletion of the license event data has failed.	Deletion of the license event data has failed. Confirm that the DBMS is running, and then retry the operation. If the problem cannot be resolved, detailed investigation is required to determine the cause and resolve the problem. Contact the customer support, who may ask you to collect troubleshooting information.

Message ID	Message Text	Description
KAPM00130-E	There is no value in the request.	There is no value in the request. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00131-E	A required token is not specified.	A required token is not specified. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00132-E	The event name is invalid.	The event name is invalid. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00133-E	The DBMS is not running.	The DBMS is not running. Make sure the DBMS has started.
KAPM00134-E	An error occurred during a DBMS access.	An error occurred during a DBMS access. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00137-E	An authentication error occurred.	An authentication error occurred. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00138-E	Authentication data for delete processing is invalid.	Authentication data for delete processing is invalid. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00139-I	Deletion of authentication data for all products will now start.	Deletion of authentication data for all products will now start.
KAPM00140-I	Deletion of authentication data will now start. Application name: <i>aa...aa</i> Service name: <i>bb...bb</i> <i>aa...aa</i> : Application name	Deletion of authentication data will now start.

Message ID	Message Text	Description
	<i>bb...bb</i> : Service name	
KAPM00141-E	An attempt to lock the table has failed.	An attempt to lock the table has failed. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00145-E	The RD area of HBase is blocked.	The RD area of HBase is blocked. Remove the cause of the HiRDB blockage, and then try again.
KAPM00146-E	Requests containing QueryString are not accepted.	Requests containing QueryString are not accepted. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00162-E	There is an error in the protocol. (element = <i>aa...aa</i>) <i>aa...aa</i> : Element	There is an error in the protocol. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00163-E	There is an error in the protocol. (element = <i>aa...aa</i> , attribute = <i>bb...bb</i> , value = <i>cc...cc</i>) <i>aa...aa</i> : Element <i>bb...bb</i> : Attribute <i>cc...cc</i> : Value	There is an error in the protocol. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00192-E	An exception was detected.	An exception was detected. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00199-E	<i>aa...aa</i> <i>aa...aa</i> : Name of the exception object and the reason that object was thrown, or the backtrace for that object	Detailed information for KAPMxxxxx-E. This indicates the thrown exception object and the backtrace for that object. See the message KAPMxxxxx-E.
KAPM00203-E	The DBMS is not running.	The DBMS is not running. Make sure the DBMS has started.
KAPM00204-E	The RD area of HBase is blocked.	The RD area of HBase is blocked. Remove the cause of the HiRDB blockage, and then try again.

Message ID	Message Text	Description
KAPM00205-E	An error occurred during access to the DBMS.	An error occurred during access to the DBMS. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00206-E	The specified event data has already been registered. (application type = <i>aa...aa</i> , event type = <i>bb...bb</i> , event code = <i>cc...cc</i>) <i>aa...aa</i> : Application type <i>bb...bb</i> : Event type <i>cc...cc</i> : Event code	The specified event data has already been registered. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00207-E	Event data cannot be updated because no event data exists. (application type = <i>aa...aa</i> , event type = <i>bb...bb</i> , event code = <i>cc...cc</i>) <i>aa...aa</i> : Application type <i>bb...bb</i> : Event type <i>cc...cc</i> : Event code	Event data cannot be updated because no event data exists. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00208-E	Communication with the SSO server has failed.	Communication with the SSO server has failed. Make sure the following have started: the HBase Storage Mgmt Common Service or HBase Storage Mgmt Web Service, and the database.
KAPM00209-E	Authentication has failed.	Authentication has failed. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00210-E	A program type specified for TNB_SoftwareFeature is not registered. (application type = <i>aa...aa</i>) <i>aa...aa</i> : Application type	A program type specified for TNB_SoftwareFeature is not registered. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00211-E	Associated data does not exist. (application type = <i>aa...aa</i>) <i>aa...aa</i> : Application type	Associated data does not exist. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.

Message ID	Message Text	Description
KAPM00212-E	An event management object cannot be deleted because the specified parameter is invalid. (application type = <i>aa...aa</i> , event type = <i>bb...bb</i> , event code = <i>cc...cc</i>) <i>aa...aa</i> : Application type <i>bb...bb</i> : Event type <i>cc...cc</i> : Event code	An event management object cannot be deleted because the specified parameter is invalid. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00213-E	The value registered in the database is invalid. (application type = <i>aa...aa</i> , event type = <i>bb...bb</i> , event code = <i>cc...cc</i>) <i>aa...aa</i> : Application type <i>bb...bb</i> : Event type <i>cc...cc</i> : Event code	The value registered in the database is invalid. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00214-E	The same information is already registered in the database. (application type = <i>aa...aa</i> , event type = <i>bb...bb</i> , event code = <i>cc...cc</i>) <i>aa...aa</i> : Application type <i>bb...bb</i> : Event type <i>cc...cc</i> : Event code	The same information is already registered in the database. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00215-E	An attribute value is invalid. (attribute = <i>aa...aa</i>) <i>aa...aa</i> : Attribute	An attribute value is invalid. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00216-W	The attribute length exceeds the maximum limit. (attribute = <i>aa...aa</i> , value = <i>bb...bb</i> , maximum limit = <i>cc...cc</i>) <i>aa...aa</i> : Attribute <i>bb...bb</i> : Value <i>cc...cc</i> : Maximum limit	The attribute length exceeds the maximum limit. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00217-E	An invalid parameter is specified.	An invalid parameter is specified. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAPM00218-W	The relation between the license warning window and the version window is not registered. (application type = <i>aa...aa</i>)	The relation between the license warning window and the version window is not registered. (application type = <i>aa...aa</i>)

Message ID	Message Text	Description
KAPM19216-I	Succeeded performing service operation type: <i>aa...aa</i> on machine. <i>aa...aa</i> : Service deletion/Service registration/Service online/Service offline	When service registration/deletion/online/offline starts, confirmation message is shown.

Table A-3 KAPM40000 - KAPM49999 (Messages Output by Hitachi Command Suite Common Component)

Message ID	Message Text	Description
KAPM49001-E	<i>aa...aa</i> <i>aa...aa</i> : Name of the exception object and the reason that object was thrown, or the backtrace for that object	Detailed information for KAPMxxxxx-E. This indicates the thrown exception object and the backtrace for that object. See the message KAPMxxxxx-E.

Table A-4 KDJE40000 - KDJE49999 (Messages Output by Hitachi Command Suite Common Component)

Message ID	Message Text	Description
KDJE41000-E	Failed to connect to Web container. <i>errno=aa...aa, bb...bb, cc...cc</i> <i>aa...aa</i> : System-specific error number <i>bb...bb</i> : Web container IP address used to communicate with the web server <i>cc...cc</i> : Web container port number used to communicate with the web server Output destinations: syslog/Eventlog	An attempt to connect to the Web container has failed. Make sure that: <ol style="list-style-type: none"> 1. The worker port number is correct. 2. The worker host name or IP address is correct. 3. The queue for web container execution does not exceed the maximum limit. 4. The web container has started. Remove the cause of the error by following the error's system-specific error number (this is a value defined in <i>errno.h</i> in a UNIX system, and the return value of <i>WSAGetLastError()</i> in a Windows system).
KDJE41001-E	Redirection to worker <i>aa...aa</i> failed. <i>aa...aa</i> : Worker name Output destinations: syslog/Eventlog	An error occurred while communicating with the worker. An error occurred while communicating to worker <i>aa...aa</i> . Follow the message last output (such as KDJE41000) to solve the problem.
KDJE41002-E	Could not redirect the request to worker. Because redirector could not access the definition file : <i>aa...aa</i>	The request could not be redirected to the worker because the redirector could not access the definition file.

Message ID	Message Text	Description
	<i>aa...aa</i> : File name Output destinations: syslog/ Eventlog	The definition file of <i>aa...aa</i> could not be accessed. Check the access permissions and whether the definition file exists, and restart the web server.
KDJE41003-W	Invalid parameter value is specified in <i>aa...aa</i> file : (<i>bb...bb=cc...cc</i>). Default parameter value is used : <i>dd...dd</i> <i>aa...aa</i> : File name <i>bb...bb</i> : Parameter name <i>cc...cc</i> : Value <i>dd...dd</i> : Default value Output destinations: syslog/ Eventlog	The value specified in the parameter is invalid. The default value will be used. To change the value of the <i>bb...bb</i> parameter of <i>aa...aa</i> file from the default value to an appropriate value, and restart the web server.
KDJE41004-E	Could not redirect the request to a worker because request header was too long. Output destinations: syslog/ Eventlog	The redirector could not make a request to the worker, because the header size of the HTTP request is too large. Remove the cause of the overly large HTTP request header, and re-access the worker. A possible cause is that the HTTP GET method is being used instead of the POST method.
KDJE41005-E	Could not redirect the request to a worker because worker name which is specified in the mapping definition file was not defined to worker.list parameter in the workers definition file. (worker name= <i>aa...aa</i>) <i>aa...aa</i> : Worker name Output destinations: syslog/ Eventlog	The redirector cannot redirect the request to the worker because the worker specified in the mapping definition file is not defined in the <code>worker.list</code> parameters. Specify the worker name (<i>aa...aa</i>) defined in the mapping definition file (default name: <code>uriworkermap.properties</code>) in the <code>worker.list</code> parameters of the worker definition file (default name: <code>uriworkermap.properties</code>), and restart the web server.
KDJE41006-E	Could not redirect the request to a worker because a required parameter was not specified in the workers definition file. (parameter= <i>aa...aa</i>) <i>aa...aa</i> : Parameter name Output destinations: syslog/ Eventlog	The redirector cannot redirect the request to the worker because a required parameter has not been specified in the worker definition file. Specify the <i>aa...aa</i> parameter in the worker definition file (default name: <code>workers.properties</code>), and restart the web server.
KDJE41007-E	Could not redirect the request to a worker because invalid value was specified in the workers definition file. (parameter= <i>aa...aa</i> ,value= <i>bb..bb</i>)	The redirector could not redirect the request to the worker because the parameter value specified in the worker definition file is invalid.

Message ID	Message Text	Description
	<p><i>aa...aa</i>: Parameter name</p> <p><i>bb...bb</i>: Value</p> <p>Output destinations: syslog/ Eventlog</p>	Specify an appropriate value for the worker definition file (default name: <code>workers.properties</code>) parameter (<i>aa...aa</i>), and restart the web server.
KDJE41008-W	<p>Invalid parameter value is specified in the workers definition file (parameter=<i>aa...aa</i>,value=<i>bb...bb</i>). Default parameter value is used : <i>cc...cc</i></p> <p><i>aa...aa</i>: Parameter name</p> <p><i>bb...bb</i>: Value</p> <p><i>cc...cc</i>: Default value</p> <p>Output destinations: syslog/ Eventlog</p>	<p>The parameter value specified in the worker definition file is invalid. The default value will be used.</p> <p>To change the worker definition file (default name: <code>workers.properties</code>) parameter (<i>aa...aa</i>) from the default value, specify an appropriate value in the <i>aa...aa</i> parameter, and restart the web server.</p>
KDJE41009-E	<p>Could not create worker because it is out of memory.</p> <p>Output destinations: syslog/ Eventlog</p>	<p>The worker could not be created because memory is insufficient.</p> <p>Memory has become insufficient. Secure more memory for the system, and restart the web server. This happens when a value specified in the worker definition file parameter (<code>worker.worker-name.cachesize</code>) is too large. The <code>worker.worker-name.cachesize</code> value consumes memory as per the following formula:</p> <p>Memory consumption = (<code>worker.worker-name.cachesize</code> value) * 10 kilobytes</p>
KDJE41010-E	<p>Failed to connect to web client. <i>errno=aa...aa</i></p> <p><i>aa...aa</i>: System-specific error number</p> <p>Output destinations: syslog/ Eventlog</p>	<p>An attempt to communicate with the client that submitted the requested has failed.</p> <p>The client who submitted the request may have stopped during communication. Remove the cause of the error by following the error's system-specific error number (this is the definition value of <code>errno.h</code> in a UNIX system, and the return value of <code>WSAGetLastError()</code> in a Windows system).</p>
KDJE41012-E	<p>The uri pattern that does not start with '/' was specified in the <i>aa...aa</i> file. This parameter is ignored(<i>bb...bb</i> to <i>cc...cc</i>).</p> <p><i>aa...aa</i>: File name</p> <p><i>bb...bb</i>: URI pattern</p> <p><i>cc...cc</i>: Worker name</p>	<p>The URI pattern specified in the definition file does not start with the "/" character. This parameter will be ignored.</p> <p>To validate the specified URI pattern and worker name, start the <i>bb...bb</i> URI pattern of the <i>aa...aa</i> file with a "/" character, and restart the web server.</p>

Message ID	Message Text	Description
	Output destinations: syslog/ Eventlog	
KDJE41016-E	Could not redirect the request because it is out of memory. Output destinations: syslog/ Eventlog	The redirector cannot transfer the request because memory is insufficient. Memory has become insufficient. Secure more memory for the system, and restart the web server.

Details of HiRDB Messages

This section lists and describes the error messages related to HiRDB.

Table A-5 Description of Error Messages Output by HiRDB

Table	Table Title	Table Contents	Message Description and Action
Table A-6 HiRDB Messages (KFPH) on page A-423	HiRDB Messages (KFPH)	Messages are classified by prefix and described in each table.	Follow the instructions in the <i>Description and Action</i> column for each message.
Table A-7 HiRDB Messages (KFPO) on page A-423	HiRDB Messages (KFPO)		
Table A-8 HiRDB Messages (KFPR) on page A-425	HiRDB Messages (KFPR)		
Table A-9 HiRDB Messages (KFPS) on page A-425	HiRDB Messages (KFPS)		
Table A-10 HiRDB Messages (No Action Required)	HiRDB Messages (which require no action)	Messages that are not output frequently are classified according to the required action, and listed in each table.	No action is required for the message.

Table	Table Title	Table Contents	Message Description and Action
on page A-426			
Table A-11 HiRDB Messages (Require Collecting Maintenance Information and Contacting Customer Support) on page A-427	HiRDB Messages (which require collection of maintenance information, and contact to customer support)		Collect maintenance information, and then contact customer support.
Table A-12 HiRDB Messages (Require Re-executing the Operation) on page A-429	HiRDB Messages (which require re-execution of the operation)		Re-execute the operation in which an error occurred. If the same message is output, collect maintenance information, and then contact customer support.
Table A-13 HiRDB Messages (Require Restoring the Database) on page A-430	HiRDB Messages (which require restoration of the database)	Messages that are not output frequently are classified according to the required action, and listed in each table.	Use the <code>hcmdsdb</code> command to restore the database by using the backup obtained by the <code>hcmdsbackups</code> command.
Table A-14 HiRDB Messages (Require Restarting the System and Re-executing the Operation) on page A-430	HiRDB Messages (which require the system to be restarted, and re-execution of the operation)		Stop the service programs of the Hitachi program products, restart the system, and then re-execute the operation. If the same message is output, collect maintenance information, and then contact customer support.

A HiRDB error message consists of a message ID and the error message text. The format is as follows:

- **Format:**

KFPAmmmmm-z message-text (see [Table A-11 HiRDB Messages \(Require Collecting Maintenance Information and Contacting Customer Support\)](#) on page A-427)

KFPcmmmmm-z message-text (see [Table A-10 HiRDB Messages \(No Action Required\)](#) on page A-426 and [Table A-11 HiRDB Messages \(Require Collecting Maintenance Information and Contacting Customer Support\)](#) on page A-427)

KFPDmmmmmm-z message-text (see [Table A-10 HiRDB Messages \(No Action Required\)](#) on page A-426 and [Table A-12 HiRDB Messages \(Require Re-executing the Operation\)](#) on page A-429)

KFPHmmmmmm-z message-text (see [Table A-6 HiRDB Messages \(KFPH\)](#) on page A-423, and [Table A-10 HiRDB Messages \(No Action Required\)](#) on page A-426 to [Table A-13 HiRDB Messages \(Require Restoring the Database\)](#) on page A-430)

KFPImmmmmm-z message-text (see [Table A-12 HiRDB Messages \(Require Re-executing the Operation\)](#) on page A-429 and [Table A-13 HiRDB Messages \(Require Restoring the Database\)](#) on page A-430)

KFPKmmmmmm-z message-text (see [Table A-11 HiRDB Messages \(Require Collecting Maintenance Information and Contacting Customer Support\)](#) on page A-427)

KFPLmmmmmm-z message-text (see [Table A-10 HiRDB Messages \(No Action Required\)](#) on page A-426 to [Table A-14 HiRDB Messages \(Require Restarting the System and Re-executing the Operation\)](#) on page A-430)

KFPommmmm-z message-text (see [Table A-7 HiRDB Messages \(KFPO\)](#) on page A-423 and [Table A-11 HiRDB Messages \(Require Collecting Maintenance Information and Contacting Customer Support\)](#) on page A-427)

KFPRmmmmmm-z message-text (see [Table A-8 HiRDB Messages \(KFPR\)](#) on page A-425, and [Table A-10 HiRDB Messages \(No Action Required\)](#) on page A-426 to [Table A-13 HiRDB Messages \(Require Restoring the Database\)](#) on page A-430)

KFPSmmmmmm-z message-text (see [Table A-9 HiRDB Messages \(KFPS\)](#) on page A-425 to [Table A-14 HiRDB Messages \(Require Restarting the System and Re-executing the Operation\)](#) on page A-430)

KFPUmmmmmm-z message-text (see [Table A-10 HiRDB Messages \(No Action Required\)](#) on page A-426 to [Table A-12 HiRDB Messages \(Require Re-executing the Operation\)](#) on page A-429)

KFPXmmmmmm-z message-text (see [Table A-10 HiRDB Messages \(No Action Required\)](#) on page A-426 to [Table A-13 HiRDB Messages \(Require Restoring the Database\)](#) on page A-430)

mmmmmm is the message number, and *z* is one of the following message levels:

I: Information

Q: Question

W: Warning

E: Error

- **Output destination:**

The error message is output to syslog or the event log.

Table A-6 HiRDB Messages (KFPH)

Message ID	Message Text	Description
KFPH00135-E	<p><i>aa....aa</i> command failed, server = SDS01</p> <p><i>aa....aa</i>: Command name</p> <p>Output destination: original log trace and either syslog or the event log</p>	<p>The server SDS01 could not execute the operation command <i>aa....aa</i>. The system cancels the operation from the server SDS01, and continues processing.</p> <p>Re-execute the operation executed immediately before this message was output. If the same message is output, collect maintenance information, and then contact customer support.</p>
KFPH20004-E	<p>Server SDS01 termination failed, function=<i>aa....aa</i>, return code=<i>bbbb</i></p> <p><i>aa....aa</i>: Function resulting in the error</p> <p><i>bbbb</i>: Return code</p> <p>Output destination: syslog or the event log</p>	<p>During termination of the server SDS01, a <i>bbbb</i> error occurred in <i>aa....aa</i>. The system stops termination of the server SDS01.</p> <p>An operation submitted before termination of the server was submitted has not finished. Wait until the executing operation finishes, and then re-execute termination of the server. If the same message is output, collect maintenance information, and then contact customer support.</p>
KFPH23006-E	<p>Failed to allocate semaphore, errno=<i>aa....aa</i></p> <p><i>aa....aa</i>: Error cause code</p> <p>4: The semaphore count per semaphore identifier exceeded the maximum value of the system.</p> <p>8: The number of semaphores used by the entire system or the number of semaphore identifiers exceeded the maximum value of the system.</p> <p>Output destination: syslog or the event log</p>	<p>An attempt to allocate the semaphore resource has failed. The system terminates abnormally.</p> <p>Restart the system. If the same message is output, collect maintenance information, and then contact customer support.</p>

Table A-7 HiRDB Messages (KFPO)

Message ID	Message Text	Description
KFPO00113-E	<p>"shmget(manager)" failed. size=<i>aa....aa</i>, errno=<i>bbb</i></p>	<p>The <code>shmget</code> system call that was issued in order to obtain shared memory resulted in an error. The system terminates abnormally.</p>

Message ID	Message Text	Description
	<p><i>aa....aa</i>: Size of the shared memory to be obtained (in bytes)</p> <p><i>bbb</i>: Value of <code>errno</code> for the <code>shmget</code> system call</p> <p>Output destination: syslog or the event log</p>	<p>Stop the service programs of the Hitachi Command Suite program products, restart the system, and then re-execute the operation. If the same message is output, take appropriate actions according to the value of <code>errno</code> for the <code>shmget</code> system call (see <i>Note</i>).</p>
KFPO00114-E	<p>"shmget(<i>aa....aa</i>)" failed. size=<i>bb....bb</i>, <code>errno</code>=<i>ccc</i></p> <p><i>aa....aa</i>: Server identifier</p> <p><i>bb....bb</i>: Size of the shared memory to be obtained (in bytes)</p> <p><i>ccc</i>: Value of <code>errno</code> for the <code>shmget</code> system call</p> <p>Output destination: syslog or the event log</p>	<p>When obtaining the shared memory used by the server <i>aa....aa</i>, the <code>shmget</code> system call resulted in an error. The system terminates processing.</p> <p>Stop the service programs of the Hitachi Command Suite program products, restart the system, and then re-execute the operation. If the same message is output, take appropriate actions according to the value of <code>errno</code> for the <code>shmget</code> system call (see <i>Note</i>).</p>

Note: The table below shows the cause of the error and actions to be taken for each `errno`.

Errno	Cause		Action	
	Windows Systems	Solaris, Linux Systems	Windows Systems	Solaris, Linux Systems
12	Resources are insufficient.	The size of the shared memory to be obtained exceeds the memory size of the machine.	<p>Check whether the performance of the system in which the Hitachi Command Suite program products are set up satisfies the requirements.</p> <p>If the system does not satisfy the requirements, tune it appropriately.</p> <p>If the system satisfies the requirements, collect maintenance information, and then contact customer support.</p>	
22	A work file in the HiRDB installation directory might have been deleted while HiRDB was operating.	The size of the shared memory to be obtained exceeds the value specified in the OS kernel parameter <code>shmmax</code> .	Use the <code>hcmdssrv /stop</code> command to stop the Hitachi Command Suite Common Component service, and then use the <code>hcmdssrv /start</code> command to restart the Hitachi Command Suite Common Component service.	<p>Solaris:</p> <p>Specify a larger value in the kernel parameter <code>shmsys:shminfo_shmmax</code>, and then restart the corresponding server.</p> <p>Linux:</p> <p>Specify a larger value in the kernel parameter <code>kernel.shmmax</code>, and then restart the corresponding server.</p>

Errno	Cause		Action	
	Windows Systems	Solaris, Linux Systems	Windows Systems	Solaris, Linux Systems
28	The capacity of the installation drive is insufficient.	The number of identifiers for the shared memory exceeds the maximum for the OS.	In the installation drive, reserve a space larger than the shared memory.	Perform the following: - Reduce the number of shared memory segments in a single machine - Increase the value specified in the kernel parameter <code>shmmni</code> .
Others	---	---	Collect maintenance information, and then contact customer support.	

Table A-8 HiRDB Messages (KFPR)

Message ID	Message Text	Description
KFPR26032-E	Unable to remove temporary file, host= <i>aa....aa</i> , file= <i>bb....bb</i> <i>aa....aa</i> : Name of the host where the file that cannot be deleted is located <i>bb....bb</i> : Name of the file that cannot be deleted Output destination: syslog or the event log	A temporary file cannot be deleted. The system continues processing. After the operation finishes, delete the file <i>bb....bb</i> . If the same message is output, collect maintenance information, and then contact customer support.
KFPR26243-E	Unable to remove temporary file, host= <i>aa....aa</i> , file= <i>bb....bb</i> <i>aa....aa</i> : Name of the host where the file that cannot be deleted is located <i>bb....bb</i> : Name of the file that cannot be deleted Output destination: syslog or the event log	A temporary file cannot be deleted. The system continues processing. After the operation finishes, delete the file <i>bb....bb</i> . If the same message is output, collect maintenance information, and then contact customer support.

Table A-9 HiRDB Messages (KFPS)

Message ID	Message Text	Description
KFPS00719-E	Message output error. message ID= <i>aaa</i> <i>aaa</i> : Message ID of the message to be output Output destination: original log trace and either syslog or the event log	Memory was insufficient when a message was output. The system continues processing. Stop the service programs of the Hitachi Command Suite program products, and then restart the system. Follow the instructions described in the <i>Description and Action</i> column for the message with the ID <i>aaa</i> .

Table A-10 HiRDB Messages (No Action Required)

Prefix	Message ID
KFPC	KFPC00101-I
KFPD	KFPD00029-W
KFPH	KFPH00035-W, KFPH00110-I, KFPH00115-I, KFPH00130-I, KFPH00134-I, KFPH00157-W, KFPH00210-I, KFPH00211-I, KFPH00212-I, KFPH00213-W, KFPH00372-I, KFPH20006-W, KFPH20007-W, KFPH20008-W, KFPH20009-W, KFPH20010-W, KFPH20015-I, KFPH22004-W, KFPH22012-W, KFPH22017-I, KFPH22019-I, KFPH22020-W, KFPH22021-W, KFPH22022-E, KFPH22023-W, KFPH22024-I, KFPH22030-W, KFPH22031-W, KFPH22034-W, KFPH23008-W, KFPH23013-W, KFPH23014-W, KFPH23017-W, KFPH23018-W, KFPH23024-I, KFPH23030-I, KFPH23201-W, KFPH23202-W, KFPH24004-I, KFPH26001-I, KFPH26010-I, KFPH29005-W, KFPH29006-W, KFPH29008-I

Troubleshooting for Message KAQB11880-E

The KAQB11880-E message is output when an error occurs during command execution. If this message is output, resolve the problem according to the function name and error code indicated in the message.

- [Troubleshooting for Message KAQB11880-E](#)

Troubleshooting for Message KAQB11880-E

If the KAQB11880-E message is output, take appropriate actions according to the tables below.

Table B-1 When KAQB11880-E displays bur_svolimport as the function name

Error-code	Cause and action
60	The copy destination file system that contains the specified device file could not be connected to the node. The <code>horcfreeze</code> command might not have been executed before the pair was split. After resynchronizing the pair, try again by using the proper procedure. If this error message is still output, collect all the log data, and then contact maintenance personnel.
69	An error occurred in the specified device file. Remove the cause, and then re-execute.
71	The copy destination file system that contains the specified device file could not be connected to the node due to one of the following causes: <ul style="list-style-type: none"> • If the SSUS status of the copy destination file system contained in the specified device file does not have read/write permissions, change the SSUS status to have read/write permissions, and then re-execute. • If the device files specified with the <code>horcvmimport</code> command are excessive or insufficient, check all the device files that are to contain the new copy destination file system, specify the correct device file numbers, and then re-execute. • If the specified device file continues to fail, remove the cause, and then re-execute. If the error does not correspond to any of the above, acquire all the log data, and then contact maintenance personnel.
77	The copy destination file system that contains the specified device file is already connected to the nodes. Check the specified device file, and then re-execute.
80	An attempt to reserve memory has failed. Wait a while, and then re-execute.
1-16, 99	An unexpected error occurred. Acquire all the log files, and then contact the maintenance personnel. If you are using local data encryption, check the system messages on both nodes to see whether the KAQM05256-E message, or a message ranging from KAQM05258-E to KAQM05264-E was output during OS startup. If an error occurred, take action as described in the error message, and then retry the operation. If an error occurs again, acquire all the log data, and then contact maintenance personnel.

Table B-2 When KAQB11880-E displays enas_chninfo or enas_luinfo as the function name

Error-code	Cause and action
1	An internal error (incorrect option) occurred. Acquire all the log files, and then contact the maintenance personnel.
2	An internal error occurred. Acquire all the log files, and then contact the maintenance personnel.

Table B-3 When KAQB11880-E displays fs_attach_set as the function name

Error-code	Cause and action
1	An internal error (incorrect option) occurred. Acquire all the log files, and then contact the maintenance personnel.
23	An internal error occurred. Acquire all the log files, and then contact the maintenance personnel.

Table B-4 When KAQB11880-E displays fs_define_lvm_resource as the function name

Error-code	Cause and action
1	An unexpected error occurred. Acquire all the log files, and then contact the maintenance personnel.
2	An internal error (incorrect option) occurred. Acquire all the log files, and then contact the maintenance personnel.
3	An error occurred during registration into a resource group or virtual server. Check the statuses of the cluster, nodes, and resource groups. Otherwise check the status of a virtual server. If the statuses are normal, acquire all log files, and then contact maintenance personnel.

Table B-5 When KAQB11880-E displays fs_delete_lvm_resource as the function name

Error-code	Cause and action
1	An unexpected error occurred. Acquire all the log files, and then contact the maintenance personnel.
2	An internal error (incorrect option) occurred. Acquire all the log files, and then contact the maintenance personnel.

Error-code	Cause and action
3	An error occurred during deletion from a resource group or virtual server. Check the statuses of the cluster, nodes, and resource groups. Otherwise check the status of a virtual server. If the statuses are normal, acquire all log files, and then contact maintenance personnel.

Table B-6 When KAQB11880-E displays fs_mkdir as the function name

Error-code	Cause and action
1	An internal error (incorrect option) occurred. Acquire all the log files, and then contact the maintenance personnel.
255	An attempt to create the mount point directory has failed. Check to see whether an error has occurred in the OS disk.

Table B-7 When KAQB11880-E displays fs_phy_info as the function name

Error-code	Cause and action
1	An internal error (incorrect option) occurred. Acquire all the log files, and then contact the maintenance personnel.

Table B-8 When KAQB11880-E displays fs_phy_set as the function name

Error-code	Cause and action
1	An internal error (incorrect option) occurred. Acquire all the log files, and then contact the maintenance personnel.

Table B-9 When KAQB11880-E displays fs_set as the function name

Error-code	Cause and action
1	An internal error (incorrect option) occurred. Acquire all the log files, and then contact the maintenance personnel.
2	The specified device file cannot be accessed because of one of the following reasons. If the recommended action does not fix the problem, acquire all the log files, and then contact the maintenance personnel. <ul style="list-style-type: none"> • If the device file specified with the <code>horcimport</code> command contains no file system, copy a file system onto the device file and then re-execute. • If an error occurs in the specified device file, remove the error and then re-execute.

Error-code	Cause and action
3	The total capacity of the copy destination file system exceeds the upper limit. Check whether there is a mistake in the specification of the device files.
6	Another file system is already using the specified copy destination file system name. Specify a new file system name, and then re-execute.
22	An attempt to access the specified device file has failed. Check to see whether an error has occurred in the device file.
23	An attempt to check the status of the specified device file has failed. Check to see whether an error has occurred in the device file.

Table B-10 When KAQB11880-E displays fs_setvm as the function name

Error-code	Cause and action
1	An internal error (incorrect option) occurred. Acquire all the log files, and then contact the maintenance personnel.
2	An attempt to access the specified file system has failed. Check to see whether an error has occurred in the file system. If no error has occurred, acquire all the log files, and then contact the maintenance personnel.
10	An internal error (incorrect option) occurred. Acquire all the log files, and then contact the maintenance personnel.

Table B-11 When KAQB11880-E displays horc_freezlock as the function name

Error-code	Cause and action
1	An internal error (incorrect option) occurred. Acquire all the log files, and then contact the maintenance personnel.
99	An unexpected error occurred. Acquire all the log files, and then contact the maintenance personnel.

Table B-12 When KAQB11880-E displays lvdisplay as the function name

Error-code	Cause and action
3	An internal error (syntax error) occurred. Acquire all the log files, and then contact the maintenance personnel.
5	An internal error occurred.

Error-code	Cause and action
	Acquire all the log files, and then contact the maintenance personnel.

Table B-13 When KAQB11880-E displays lvrename as the function name

Error-code	Cause and action
3	An internal error (syntax error) occurred. Acquire all the log files, and then contact the maintenance personnel.
5	An internal error occurred. Acquire all the log files, and then contact the maintenance personnel.

Table B-14 When KAQB11880-E displays pvdata as the function name

Error-code	Cause and action
3	An internal error (syntax error) occurred. Acquire all the log files, and then contact the maintenance personnel.
5	An internal error occurred. Acquire all the log files, and then contact the maintenance personnel.

Table B-15 When KAQB11880-E displays pvscan as the function name

Error-code	Cause and action
3	An internal error (syntax error) occurred. Acquire all the log files, and then contact the maintenance personnel.
5	An internal error occurred. Acquire all the log files, and then contact the maintenance personnel.

Table B-16 When KAQB11880-E displays synclock as the function name

Error-code	Cause and action
1	An internal error (incorrect option) occurred. Acquire all the log files, and then contact the maintenance personnel.
99	An unexpected error occurred. Acquire all the log files, and then contact the maintenance personnel.

Table B-17 When KAQB11880-E displays syncscan as the function name

Error-code	Cause and action
1	An internal error (incorrect option) occurred. Acquire all the log files, and then contact the maintenance personnel.
2	An internal error (incorrect number of argument) occurred. Acquire all the log files, and then contact the maintenance personnel.
3	An internal error (incorrect file system name) occurred. Acquire all the log files, and then contact the maintenance personnel.
10	An internal error (incorrect file system name) occurred. Acquire all the log files, and then contact the maintenance personnel.
11	An internal error (incorrect file system name) occurred. Acquire all the log files, and then contact the maintenance personnel.
12	An internal error (incorrect file system name) occurred. Acquire all the log files, and then contact the maintenance personnel.
13	An internal error (incorrect file system name) occurred. Acquire all the log files, and then contact the maintenance personnel.
15	An internal error (incorrect file system name) occurred. Acquire all the log files, and then contact the maintenance personnel.
19	An internal error (incorrect file system name) occurred. Acquire all the log files, and then contact the maintenance personnel.
20	An internal error (incorrect file system name) occurred. Acquire all the log files, and then contact the maintenance personnel.
27	An internal error (incorrect file system name) occurred. Acquire all the log files, and then contact the maintenance personnel.
57	Another user has part of the resources used in processing. Wait for a while, and then re-execute.
80	An attempt to reserve memory has failed. Wait a while, and then re-execute. If the error occurs again, acquire all log files, and then contact maintenance personnel.
99	An unexpected error occurred. Acquire all the log files, and then contact the maintenance personnel.

Table B-18 When KAQB11880-E displays syncunlock as the function name

Error-code	Cause and action
1	An internal error (incorrect option) occurred. Acquire all the log files, and then contact the maintenance personnel.

Error-code	Cause and action
99	An unexpected error occurred. Acquire all the log files, and then contact the maintenance personnel.

Table B-19 When KAQB11880-E displays utlmgrfilsysludetach.pl as the function name

Error-code	Cause and action
1	The specified device file could not be disconnected from the node due to one of the following causes: <ul style="list-style-type: none"> • If a problem exists in the communication processing between nodes, check whether the OS on the partner node is inactive, check whether the cable of the management LAN is disconnected, remove the problem, and then re-execute. • If a problem exists in the specified device file, remove the problem, and then re-execute.

Table B-20 When KAQB11880-E displays utlmyselffochk.pl or utlotherfochk.pl as the function name

Error-code	Cause and action
3	An internal error occurred. Acquire all the log files, and then contact the maintenance personnel.

Table B-21 When KAQB11880-E displays vgchange as the function name

Error-code	Cause and action
3	An internal error (syntax error) occurred. Acquire all the log files, and then contact the maintenance personnel.
5	An internal error occurred. Acquire all the log files, and then contact the maintenance personnel.

Table B-22 When KAQB11880-E displays vgdisplay as the function name

Error-code	Cause and action
3	An internal error (syntax error) occurred. Acquire all the log files, and then contact the maintenance personnel.
5	An internal error occurred. Acquire all the log files, and then contact the maintenance personnel.

Table B-23 When KAQB11880-E displays vgrename as the function name

Error-code	Cause and action
3	An internal error (syntax error) occurred. Acquire all the log files, and then contact the maintenance personnel.
5	An internal error occurred. Acquire all the log files, and then contact the maintenance personnel.

Troubleshooting for Messages KAQB14200-E, KAQB14208-W, KAQM37072-E, KAQM37076-E, KAQM37078-W, or KAQM37079-W

If the KAQB14200-E, KAQB14208-W, KAQM37072-E, KAQM37076-E, KAQM37078-W, or KAQM37079-W message is output, you must take action according to the additional message.

- [Troubleshooting for Messages KAQB14200-E, KAQB14208-W, KAQM37072-E, KAQM37076-E, KAQM37078-W, or KAQM37079-W](#)

Troubleshooting for Messages KAQB14200-E, KAQB14208-W, KAQM37072-E, KAQM37076-E, KAQM37078-W, or KAQM37079-W

The following tables describe the causes of the error and the actions to be taken for KAQB14200-E and KAQB14208-W messages.

Table C-1 Causes and actions for the KAQB14200-E, KAQM37072-E, or KAQM37076-E message

Additional message	Description
/usr/local/sbin/ndmptar: Error:Can not stat: <i>directory-or-file-name</i> : No such file or directory.	/usr/local/sbin/ndmptar: Error:Can not stat: <i>directory-or-file-name</i> : No such file or directory. Cause: The directory or file specified in the FILES environment variable does not exist. Action: Specify an existing directory or file.
/usr/local/sbin/ndmptar: Error:Cowardly refusing to create an empty archive.	/usr/local/sbin/ndmptar: Error:Cowardly refusing to create an empty archive. Cause: A backup failed because the directory specified as the base directory from which a backup starts does not contain a subdirectory or file. Action: None.
/usr/local/sbin/ndmptar: Error: <i>details</i> : Input/output error.	/usr/local/sbin/ndmptar: Error: <i>details</i> : Input/output error. Cause: An error may have occurred in the file system on which the operation was being performed. Action: Check the status of the file system. If an error occurred, take action appropriate to the status. If you are unable to check the status, or if the error recurs, contact maintenance personnel.
/usr/local/sbin/ndmptar: Error: <i>directory-or-file-name</i> : Wrote only <i>bytes-written</i> of <i>total-number-of-bytes-to-write</i> bytes: Input/output error.	/usr/local/sbin/ndmptar: Error: <i>directory-or-file-name</i> : Wrote only <i>bytes-written</i> of <i>total-number-of-bytes-to-write</i> bytes: Input/output error. Cause: An error occurred in the restoration-target file system. Action:

Additional message	Description
	Correct the error that occurred in the restoration-target file system.
/usr/local/sbin/ndmptar: Error: <i>detail-information</i> : No space left on device.	<p>/usr/local/sbin/ndmptar: Error: <i>detail-information</i> : No space left on device.</p> <p>Cause:</p> <p>There is no free capacity on the target file system of the restoration.</p> <p>Action:</p> <p>Increase the capacity of the file system at the restore destination, or delete or move unnecessary files from the file system. For details about the free capacity required for the file system at the restore destination, see the online Help.</p> <p>When using a tiered file system, it might appear from the client that there is free space on the file system but data cannot be written. When using a tiered file system, temporarily suspend any file migration tasks and perform restoration again. For details about how to perform file migration tasks, see the <i>Administrator's Guide</i>.</p>
/usr/local/sbin/ndmptar: Error: Quota information cannot be restored to specified file system.	<p>/usr/local/sbin/ndmptar: Error: Quota information cannot be restored to specified file system.</p> <p>Cause:</p> <p>An attempt was made to restore only quota information to a file system mounted with quota settings disabled.</p> <p>Action:</p> <p>Make sure that the restoration-target file system is mounted with the quota settings enabled.</p>
/usr/local/sbin/ndmptar: Error: Quota settings are disabled for the specified file system.	<p>/usr/local/sbin/ndmptar: Error: Quota settings are disabled for the specified file system.</p> <p>Cause:</p> <p>Quota information was backed up from a volume mounted with the quota settings disabled.</p> <p>Action:</p> <p>Make sure that the backup-target file system is mounted with the quota settings enabled.</p>
/usr/local/sbin/ndmptar: Error: An attempt to specify the settings failed because the file system (<i>file-system-name</i>) is full.	<p>/usr/local/sbin/ndmptar: Error: An attempt to specify the settings failed because the file system (<i>file-system-name</i>) is full.</p> <p>Cause:</p>

Additional message	Description
	<p>The capacity of the restoration-target file system is insufficient.</p> <p>Action:</p> <p>Expand the restoration-target file system, or delete or move unnecessary files.</p>
<p>/usr/local/sbin/ndmptar: Error:The specified file system (<i>file-system-name</i>) is not in a normal state.</p>	<p>/usr/local/sbin/ndmptar: Error:The specified file system (<i>file-system-name</i>) is not in a normal state.</p> <p>Cause:</p> <p>There might be a problem in the restoration-target file system.</p> <p>Action:</p> <p>Check whether an error occurred in the restoration-target file system.</p>
<p>/usr/local/sbin/ndmptar: Error: <i>file-name</i>: File shrank by <i>n</i> bytes; padding with zeros.</p>	<p>/usr/local/sbin/ndmptar: Error: <i>file-name</i>: File shrank by <i>n</i> bytes; padding with zeros.</p> <p>Cause:</p> <p>A backup-target file was updated while an offline backup was being executed.</p> <p>Action:</p> <p>Stop access from clients. For details about how to back up data onto a tape device, see the <i>Administrator's Guide</i>.</p>
<p>/usr/local/sbin/ndmptar: Error: <i>directory-or-file-name</i>: file changed as we read it.</p>	<p>/usr/local/sbin/ndmptar: Error: <i>directory-or-file-name</i>: file changed as we read it.</p> <p>Cause:</p> <p>A backup-target directory or file was updated while an offline backup was being executed.</p> <p>Action:</p> <p>Stop access from clients. For details about how to back up data onto a tape device, see the <i>Administrator's Guide</i>.</p>
<p>/usr/local/sbin/ndmptar: Error: <i>directory-or-file-name</i>:Cannot change ownership to uid <i>UID</i>, gid <i>GID</i>: No such file or directory.</p>	<p>/usr/local/sbin/ndmptar: Error: <i>directory-or-file-name</i>:Cannot change ownership to uid <i>UID</i>, gid <i>GID</i>: No such file or directory.</p> <p>Cause:</p> <p>A directory or file was deleted from the restoration target while a restoration was being executed.</p> <p>Action:</p> <p>Stop access from clients. For details about how to back up data onto a tape device, see the <i>Administrator's Guide</i>.</p>
<p>/usr/local/sbin/ndmptar: Error: The file system was unmounted during backup or restoration processing.</p>	<p>/usr/local/sbin/ndmptar: Error: The file system was unmounted during backup or restoration processing.</p>

Additional message	Description
	<p>Cause: The file system or differential-data snapshot was unmounted during backup or restoration processing.</p> <p>Action: Restore the file system or differential-data snapshot to the status in which backup and restoration can be performed.</p>
<p>/usr/local/sbin/ndmptar: Error: <i>link-source-file-name</i>: Cannot hard link to '<i>link-destination-file-name</i>': No such file or directory.</p>	<p>/usr/local/sbin/ndmptar: Error: <i>link-source-file-name</i>: Cannot hard link to '<i>link-destination-file-name</i>': No such file or directory.</p> <p>Cause: Hard link could not be restored correctly.</p> <p>Action: No action that can be taken. When you specify more than one directory or file in the <code>FILES</code> environment variable and attempt to perform backup, if the backed up data includes hard links, the data may not be restored. Review the backup target specification.</p>
<p>/usr/local/sbin/ndmptar: Error: Data restoration failed. (<i>directory-for-which-data-restoration-failed</i>)</p>	<p>/usr/local/sbin/ndmptar: Error: Data restoration failed. (<i>directory-for-which-data-restoration-failed</i>)</p> <p>Cause: There was an attempt to restore data to the differential-data snapshot open in the file share. The path of the directory that contains the restore-source data is duplicated with the path of the directory for the differential-data snapshot open in the file share.</p> <p>Action: Change the restore destination so that the data will not be restored to the differential-data snapshot open in the file share, and the try again.</p>
<p>/usr/local/sbin/ndmptar: Error: Cannot allocate memory for blocking factor <i>number-of-blocks</i>.</p>	<p>/usr/local/sbin/ndmptar: Error: Cannot allocate memory for blocking factor <i>number-of-blocks</i>.</p> <p>Cause: An attempt to reserve memory has failed.</p> <p>Action: Wait a while, and then try again.</p>
<p>/usr/local/sbin/ndmptar: Error: getcwd failed: No such file or directory.</p>	<p>/usr/local/sbin/ndmptar: Error: getcwd failed: No such file or directory.</p> <p>Cause:</p>

Additional message	Description
	<p>The target directory was deleted while a backup or restoration was being executed.</p> <p>Action:</p> <p>Stop access from clients.</p>
<p>/usr/local/sbin/ndmptar: Error: The default quota is not enabled for the specified volume.</p>	<p>/usr/local/sbin/ndmptar: Error: The default quota is not enabled for the specified volume.</p> <p>Cause:</p> <p>An attempt was made to back up quota information from a volume, used for the differential-data snapshot, which was mounted with quota settings disabled.</p> <p>Action:</p> <p>Make sure that the backup-target file system is mounted with the quota settings enabled.</p>
<p>/usr/local/sbin/ndmptar: Error: can't get the working directory.: No such file or directory.</p>	<p>/usr/local/sbin/ndmptar: Error: can't get the working directory.: No such file or directory.</p> <p>Cause:</p> <p>The target directory was deleted while a backup or restoration was being executed.</p> <p>Action:</p> <p>Stop access from clients.</p>
<p>/usr/local/sbin/ndmptar: Error: can't find directory <i>directory-name</i>.</p>	<p>/usr/local/sbin/ndmptar: Error: can't find directory <i>directory-name</i>.</p> <p>Cause:</p> <p>The target directory was deleted while a backup or restoration was being executed.</p> <p>Action:</p> <p>Stop access from clients.</p>
<p>/usr/local/sbin/ndmptar: Error: <i>directory-name</i>: Cannot mkdir: No such file or directory.</p>	<p>/usr/local/sbin/ndmptar: Error: <i>directory-name</i>: Cannot mkdir: No such file or directory.</p> <p>Cause:</p> <p>Possible causes are as follows:</p> <ul style="list-style-type: none"> • The capacity of the restore-destination file system is insufficient. • The restore-destination or restore-target directory was deleted. <p>Action:</p> <p>Take either of the following corrective actions:</p> <ul style="list-style-type: none"> • Expand the restoration-target file system. Alternatively, delete or move unnecessary files from the file system.

Additional message	Description
	<ul style="list-style-type: none"> Stop access from clients.

<p>/usr/local/sbin/ndmptar: Warning: The number of directories for which a quota has been set has reached the maximum.</p>	<p>/usr/local/sbin/ndmptar: Warning: The number of directories for which a quota has been set has reached the maximum.</p> <p>Cause:</p>

Additional message	Description
	<p>Quota could not be newly restored because the number of directories for which a quota has been set has reached the maximum.</p> <p>System Action:</p> <p>There is subtree quota information that could not be restored.</p> <p>Operator Action:</p> <p>None.</p>
<p>/usr/local/sbin/ndmptar: Warning: Processing will end with an error due to problems that occurred previously.</p>	<p>/usr/local/sbin/ndmptar: Warning: Processing will end with an error due to problems that occurred previously.</p> <p>Cause:</p> <p>The processing ends with an error due to an error that occurred before this message.</p> <p>System Action:</p> <p>The processing ends with an error.</p> <p>Operator Action:</p> <p>None.</p>
<p>/usr/local/sbin/ndmptar: Warning: Classic ACL information was converted to Advanced ACL information.</p>	<p>/usr/local/sbin/ndmptar: Warning: Classic ACL information was converted to Advanced ACL information.</p> <p>Cause:</p> <p>The backup data acquired from a file system of the Classic ACL type was restored to a file system of the Advanced ACL type.</p> <p>System Action:</p> <p>Converts Classic ACL information to Advanced ACL information, and then restores the information.</p> <p>Operator Action:</p> <p>Check the ACL settings of the restored directory and files.</p>
<p>/usr/local/sbin/ndmptar: Warning: Advanced ACL information was not restored.</p>	<p>/usr/local/sbin/ndmptar: Warning: Advanced ACL information was not restored.</p> <p>Cause:</p> <p>The backup data acquired from a file system of the Advanced ACL type was restored to a file system of the Classic ACL type.</p> <p>System Action:</p> <p>Only restores data, and does not restore the Advanced ACL information.</p> <p>Operator Action:</p>

Additional message	Description
	Check the ACL settings of the restored directory and files. If you want to restore the Advanced ACL information, specify a file system of the Advanced ACL type as the restoration target, and then retry the restoration.
/usr/local/sbin/ndmptar: Warning: The specified file (<i>name-of-file-you-attempted-to-restore</i>) could not be restored.	/usr/local/sbin/ndmptar: Warning: The specified file (<i>name-of-file-you-attempted-to-restore</i>) could not be restored. Cause: The quota information could not be correctly restored (by using DAR) because the directory that stores the subtree quota was specified. System Action: The quota information was not restored. Operator Action: When restoring the subtree quota, specify a file that contains the quota information, not a directory. If the problem cannot be solved, contact maintenance personnel.
/usr/local/sbin/ndmptar: <i>number-of-files</i> files were edited or deleted during the backup process.	/usr/local/sbin/ndmptar: Warning: <i>number-of-files</i> files were changed or deleted during the backup process. Cause: Files exist that were backed up in an incomplete state. Operator Action: Perform an incremental backup.
/usr/local/sbin/ndmptar: Warning: An attempt to specify the subtree quota failed.	/usr/local/sbin/ndmptar: Warning: An attempt to specify the subtree quota failed. Cause: One of the following errors occurred, and the attempt to specify the subtree quota failed: <ul style="list-style-type: none"> • The subtree quota has already been set in the directory above or below the directory of the restore destination, and the specified subtree quota tree exceeds three directory layers. • Above the directory of the restore destination, one of the following is specified: the subtree quota for the user or the group, or the default quota of the directory. A subtree quota is already set for the directory. Operator Action:

Additional message	Description
	Check the subtree quota at the file system for the restore destination, and revise if necessary, and then try again.
/usr/local/sbin/ndmptar: Warning: An attempt to specify the subtree quota for the user or the group, or the default quota of the directory failed because the subtree quota below the directory of the restore destination is specified.	/usr/local/sbin/ndmptar: Warning: An attempt to specify the subtree quota for the user or the group, or the default quota of the directory failed because the subtree quota below the directory of the restore destination is specified. Cause: An attempt to specify the subtree quota for the user or the group, or the default quota of the directory failed because the subtree quota below the directory of the restore destination is specified. Operator Action: After the user finishes specifying the subtree quota, restore the files that contain quota information.
/usr/local/sbin/ndmptar: Warning: An attempt to specify the subtree quota failed because another user is currently setting the subtree quota.	/usr/local/sbin/ndmptar: Warning: An attempt to specify the subtree quota failed because another user is currently setting the subtree quota. Cause: An attempt to specify the subtree quota failed because another user is currently setting the subtree quota. Operator Action: After the user finishes specifying the subtree quota, restore the files that contain quota information.
/usr/local/sbin/ndmptar: Warning: An attempt to specify the subtree quota failed because the restore destination was set to a different destination than the directory for the backup.	/usr/local/sbin/ndmptar: Warning: An attempt to specify the subtree quota failed because the restore destination was set to a different destination than the directory for the backup. Cause: An attempt to specify the subtree quota failed because the restore destination was set to a different destination than the directory for the backup. Operator Action: If the restore destination is set to a different destination than the directory for the target backup, this message is output. Set the restore destination directory to the same directory as the backup, and then try again.
Internal error occurred.: Cannot open system file.: <i>file-name: details</i>	An internal error occurred. Failed to open a system file.

Additional message	Description
	<p>Cause: An internal error (failed attempt to open a system file) occurred during backup or restore processing.</p> <p>Operator Action: Obtain all of the File Services Manager log files, and then contact the maintenance personnel. For details about the log file list for File Services Manager, see Help.</p>
<p>Internal error occurred.: Cannot read system file.: <i>file-name: details</i></p>	<p>An internal error occurred. Failed to read a system file.</p> <p>Cause: An internal error (failed attempt to read a system file) occurred during backup or restore processing.</p> <p>Operator Action: Obtain all of the File Services Manager log files, and then contact the maintenance personnel. For details about the log file list for File Services Manager, see Help.</p>

Troubleshooting for Message KAQG90016-E

The KAQG90016-E message is displayed when a hard disk drive failure occurs or when an unmount operation on a differential-data snapshot that has been mounted on demand is temporarily in conflict with a mount operation associated with CIFS access. If this message is displayed, confirm that no hard disk drive failures have occurred, and then check that there are no temporary conflicts between unmount operations on differential-data snapshots and mount operations associated with CIFS access.

- [Checking for temporary conflicts between unmount operations of differential-data snapshots and mount operations associated with CIFS access](#)

Checking for temporary conflicts between unmount operations of differential-data snapshots and mount operations associated with CIFS access

If the KAQG90016-E message is displayed, use the following procedure to address the issue. In step 2, you must refer to the log file and determine whether you need to take corrective action.

1. Check whether any hard disk drive failures have occurred.
2. If no hard disk drive failures have occurred, refer to `/var/log/xfss/xfsslog` using the timestamps to identify when the KAQG90016-E message was generated, and then verify the following:

- o The return value (ret) of `umount end` is -16.

Example

```
Aug 22 13:45:34 host1 kernel: XFS :umount start: /.auto/  
FS01+auto-H1608212300  
Aug 22 13:45:34 host1 kernel: XFS :umount end : /.auto/  
FS01+auto-H1608212300: ret = -16
```

- o To confirm that the subsequent unmount operation for the target snapshot finished normally, verify that the next return value (ret) of `umount end` is 0.

Example

```
Aug 22 14:00:34 host1 kernel: XFS :umount start: /.auto/  
FS01+auto-H1608212300  
Aug 22 14:00:34 host1 kernel: XFS :umount end : /.auto/  
FS01+auto-H1608212300: ret = 0
```

If these points can both be verified, no corrective action is required because the issue can be considered temporary. Note that you can find `/var/log/xfss/xfsslog` in the **List of RAS Information** page (for List of other log files) of the **Check for Errors** dialog box.

3. If no temporary conflicts have occurred, use maintenance mode to obtain the operating system log, and then contact maintenance personnel.

Troubleshooting for Message KAQM16058-E

The KAQM16058-E message is output when the configuration definition of the CIFS service is not correctly changed and an attempt to restore the system file (`smb.conf`) fails. Restore the configuration definition to the state it was in before being changed.

- [Restoring the CIFS service configuration definition](#)

Restoring the CIFS service configuration definition

To restore the CIFS service configuration definition to the state it was in before being changed, the method differs depending on the setting of the CIFS service authentication mode.

When Active Directory authentication is set

Check the following contents, correct the problem and then restore the CIFS service configuration definition to the state it was in before being changed.

- Check that the domain controller (before the CIFS service configuration definition was changed) is running correctly or if there is a network problem.
- Use the DNS, NIS, LDAP Setup window in File Services Manager to check the following:
 - Whether a domain name to be used for the Active Directory domain is set for **Default domain name**
 - Whether a DNS server to be used for the Active Directory domain is set for **Primary DNS server**
- Check whether the domain management password of the domain controller was changed after the CIFS service authentication mode was set. If changed, use the Active Directory Authentication window to reset the password to the changed password.
- After restoring the CIFS service configuration definition to the state it was in before being changed, you may be unable to use it correctly even if the CIFS service is restarted. In that case, click the **Rejoin Active Directory Domain** in the CIFS Service Maintenance window to rejoin the Active Directory domain.

If the CIFS service configuration definition cannot be restored even after the above problems are solved, acquire all the log files of File Services Manager and contact the maintenance personnel. For details about how to acquire the File Services Manager log files, see the *Administrator's Guide*.

When NT domain authentication or Local authentication is set

Acquire all the File Services Manager log files and contact the maintenance personnel. For details about how to acquire the File Services Manager log files, see the *Administrator's Guide*.

Troubleshooting for Message KAQM16068-E

The KAQM16068-E message is output when you fail to connect to the LDAP server used for user mapping. When this message is output, take the following action in accordance with the error details in the message.

- [Troubleshooting for Message KAQM16068-E](#)

Troubleshooting for Message KAQM16068-E

When "An attempt to set initial settings for the LDAP server failed." is output in the error details:

Check the following contents, correct the problem and then try again.

- Check whether the schema file of the created LDAP server is correctly read.
- Check whether write permission is granted to the entry that stores the LDAP user mapping account, and whether administrator permissions are granted to the user (the user with the administrator-identifier name of the LDAP server) set in CIFS Service Management window.
- Check whether there are multiple entries that store the LDAP user mapping account in the LDAP server to be used. If there is an entry that stored the LDAP user mapping account in the past, delete it.

If none of the above problems are identified as the cause, acquire all of the File Services Manager log files and contact the maintenance personnel. For details about how to acquire the File Services Manager log files, see the *Administrator's Guide*.

When the error details is not "An attempt to set initial settings for the LDAP server failed.":

In accordance with the output error details, correct the problem and then try again.

For details on restoring the CIFS service configuration definition to the state it was in before being changed, see [Restoring the CIFS service configuration definition on page E-2](#).

Troubleshooting When the Name of a File System in a Tier Other Than Tier 1 Was Output to the Message

This appendix describes the action to be taken when the name of a file system in a tier other than Tier 1 was output to the message.

- [Action to be taken when the name of a file system in a tier other than Tier 1 was output to the message](#)

Action to be taken when the name of a file system in a tier other than Tier 1 was output to the message

Identify the file system according to the following procedure.

1. Make a note of the file system name. If the file system name contains a hyphen (-), make a note of the character string before the hyphen.
2. In the File Systems subwindow, check the file system whose name begins with the character string you noted in step 1.
3. If **Enable Tiering** is set to **Yes**, check the mount status. If **Enable Tiering** is set to **No**, return to step 2.
