

Hitachi Virtual Storage Platform G130, G/F350, G/F370, G/F700, G/F900

SVOS RF 9.1

SIM Reference Guide

This document describes and provides an overview of SIM (Service Information Message) and the SIM code lists for Hitachi Virtual Storage Platform G130, G/F350, G/F370, G/F700, G/F900.

Preface

This document describes and provides an overview of SIM (Service Information Message) and the SIM code lists for Hitachi Virtual Storage Platform G130, G/F350, G/F370, G/F700, G/F900.

Please read this document carefully to understand how to use this product, and maintain a copy for reference purposes.

Intended audience

This document is intended for system administrators, Hitachi Vantara representatives, and authorized service providers who install, configure, and operate.

Readers of this document should be familiar with the following:

Data processing and RAID storage systems and their basic functions.

Product version

This document revision applies the following product versions:

- Firmware 88-04-0x or later
- SVOS RF 9.1 or later

Release notes

Read the release notes before installing and using this product. They may contain requirements or restrictions that are not fully described in this document or updates or corrections to this document. Release notes are available on Hitachi Vantara Support Connect: https://knowledge.hitachivantara.com/Documents.

Changes in this revision

Added reference codes.

Document conventions

This document uses the following storage system terminology conventions:

Convention	Description
VSP Fx00 models	Refers to all of the following models, unless otherwise noted.
	Hitachi Virtual Storage Platform F350
	Hitachi Virtual Storage Platform F370
	Hitachi Virtual Storage Platform F700
	Hitachi Virtual Storage Platform F900
VSP Gx00 models	Refers to all of the following models, unless otherwise noted.
	Hitachi Virtual Storage Platform G350
	Hitachi Virtual Storage Platform G370
	Hitachi Virtual Storage Platform G700
	■ Hitachi Virtual Storage Platform G900

This document uses the following typographic conventions:

Convention	Description
Bold	Indicates text in a window, including window titles, menus, menu options, buttons, fields, and labels. Example:
	Click OK .
	Indicates emphasized words in list items.
Italic	Indicates a document title or emphasized words in text.
	 Indicates a variable, which is a placeholder for actual text provided by the user or for output by the system. Example:
	pairdisplay -g group
	(For exceptions to this convention for variables, see the entry for angle brackets.)
Monospace	Indicates text that is displayed on screen or entered by the user. Example: pairdisplay -g oradb

Convention	Description		
<> angle	Indicates variables in the following scenarios:		
brackets	 Variables are not clearly separated from the surrounding text or from other variables. Example: 		
	Status- <report-name><file-version>.csv</file-version></report-name>		
	Variables in headings.		
[] square brackets	Indicates optional values. Example: [a b] indicates that you can choose a, b, or nothing.		
{ } braces	ndicates required or expected values. Example: { a b } indicates that you must choose either a or b.		
vertical bar	Indicates that you have a choice between two or more options or arguments. Examples:		
	[a b] indicates that you can choose a, b, or nothing.		
	{ a b } indicates that you must choose either a or b.		

This document uses the following icons to draw attention to information:

Icon	Label	Description
	Note	Calls attention to important or additional information.
0	Tip	Provides helpful information, guidelines, or suggestions for performing tasks more effectively.
A	Caution	Warns the user of adverse conditions and/or consequences (for example, disruptive operations, data loss, or a system crash).
<u> </u>	WARNING	Warns the user of a hazardous situation which, if not avoided, could result in death or serious injury.

Accessing product documentation

Product user documentation is available on Hitachi Vantara Support Connect: https://knowledge.hitachivantara.com/Documents. Check this site for the most current documentation, including important updates that may have been made after the release of the product.

Getting help

<u>Hitachi Vantara Support Connect</u> is the destination for technical support of products and solutions sold by Hitachi Vantara. To contact technical support, log on to Hitachi Vantara Support Connect for contact information: https://support.hitachivantara.com/en_us/contact-us.html.

<u>Hitachi Vantara Community</u> is a global online community for Hitachi Vantara customers, partners, independent software vendors, employees, and prospects. It is the destination to get answers, discover insights, and make connections. **Join the conversation today!** Go to <u>community.hitachivantara.com</u>, register, and complete your profile.

Comments

Please send us your comments on this document to <u>doc.comments@hitachivantara.com</u>. Include the document title and number, including the revision level (for example, -07), and refer to specific sections and paragraphs whenever possible. All comments become the property of Hitachi Vantara Corporation.

Thank you!

Chapter 1: Service Information Message (SIM) overview

SIMs are a type of messages issued from storage systems. You can configure when and how the SIMs (Service Information Message) are generated, and the notification methods.

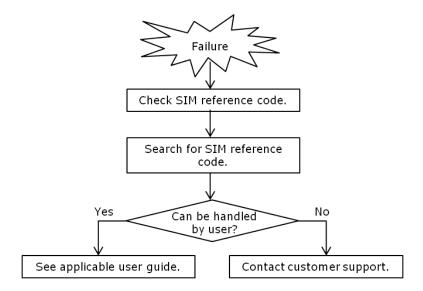

Message types

The following table lists the types of messages output from storage systems.

Message types	Description	
Device Manager - Storage Navigator message	Output when Device Manager - Storage Navigator and maintenance utility are being used. For details, see the Hitachi Device Manager - Storage Navigator Messages.	
SIM	Output from channels, paths, microprocessors of storage systems. For details, see <u>SIM code lists (on page 11)</u> .	
Other messages	Output when Storage Device List is being used or when a batch command is being executed on the SVP. See the following HTML file in the SVP:	
	<svp directory="" installation="">\wk\supervisor \sdlist\help\sdl_message_ja.html</svp>	
	■ The default <i><svp directory="" installation=""></svp></i> is "C:\Mapp".	

Actions to take when a SIM is output

When a storage system requires maintenance, a message is output. This is called a failure of a storage system (SIM: Service Information Message). SIMs are output from channels, paths, microprocessors, and so on, of the storage system. The following figure illustrates actions to take after a failure occurs.

Checking SIM reference codes

All SIMs are recorded in the storage system. When a SIM is output, Warning or Failed is displayed at the upper left of the Maintenance Utility window to notify users.

You can check SIMs on the Alert tab in the Maintenance Utility window. For details, see the *System Administrator Guide*.

Searching for SIM reference codes

In the SIM code lists, SIM codes that begin with the same digits are listed as a single code. For example, 602001 is shown as 602xxx (xxx indicates a pool number) in the SIM code list. Therefore, when searching for a SIM code, use the first few digits, 602 in this case, as a key word.

Handling failures

There are two types of SIMs. One can be handled by users, and the other must be handled by service personnel. For SIMs that can be handled by users, see the recovery procedures of the SIMs described in the applicable user guide to solve the problem. For the SIMs that must be handled by service personnel, contact the customer support. See SIM code list for troubleshooting by users (on page 12) or SIM code list for troubleshooting by service personnel (on page 14) for the SIM code lists.

Setting failure notification methods

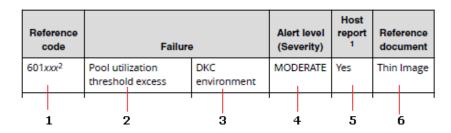

SIMs can be checked on the Alert tab. In addition, they can be notified by email messages, Syslog, SNMP, or Windows Event Log. For the procedures for setting email, Syslog, and Windows Event Log notifications, see the *System Administrator Guide*. For the procedure for configuring the SNMP notification, see the *Hitachi Alert Notification Guide*.

Chapter 2: SIM code lists

This chapter describes the lists of the SIM reference codes that are reported when failures occur in storage systems, and a matrix of drive box numbers, CDEV numbers, and RDEV numbers.

Columns in the SIM code lists

The SIM code list tables have columns shown below.

The description of each column is as follows:

- **1**: SIM code number. *x* is a variable value.
- 2: Brief description of the failure
- **3**: Failed location in the storage system
- 4: Severity of the failure

Item	Description
SERVICE	Mild failure
MODERATE	Partial failure
SERIOUS	The failure part stops operation.
ACUTE	The entire storage system stops operation.

- 5: With or without host report
- **6**: Document to be referenced for troubleshooting by users. For the document title, see the legends for the table in <u>SIM code list for troubleshooting by users (on page 12)</u>. Only that table has this column.

SIM code list for troubleshooting by users

The following table lists and describes SIM codes that require action or restoration by users. xxxin the following table indicates the port number.

If you select Host Report for Notification Alert in the **Set Up Alert Notifications** window, alert notification for SIMs which are reported to the host is sent. If you select All, alert notification of all SIMs are sent.

Reference code	Failure		Alert level (Severity)	Host report	Reference document
602 <i>xxx</i>	Pool blocking	DKC environment	MODERATE	Yes	Thin Image
602ffe	Pools blocking by SM volatile	DKC environment	MODERATE	Yes	Thin Image
603000	SM Space Warning	DKC environment	MODERATE	Yes	Thin Image
604 <i>xxx</i>	Exceeded Threshold of actual pool use rate	DKC environment	MODERATE	Yes	Thin Image
605 <i>xxx</i>	Actual pool use rate reaches upper limit	DKC environment	MODERATE	Yes	Thin Image
606 <i>xxx</i>	Exceeded Fixed outage Threshold of pool use rate	DKC environment	MODERATE	Yes	Thin Image
624000	SM Full	DKC environment	MODERATE	Yes	Provisioning
627 <i>xxx</i>	The DP POOL LDEV blockade	DKC environment	SERIOUS	Yes	Provisioning
628000	DP Protect attribute setting of DRU	DKC environment	SERIOUS	Yes	Provisioning
629 <i>xxx</i>	Exceeded Warning Threshold of DP pool use rate	DKC environment	MODERATE	Yes	Provisioning
62axxx	Actual DP pool use rate reaches upper limit	DKC environment	MODERATE	Yes	Provisioning
62b000	Threshold of DP pool use rate remains exceeded	DKC environment	MODERATE	Yes	Provisioning

Reference code	Failure		Alert level (Severity)	Host report	Reference document
62cxxx	Exceeded Depletion Threshold of DP pool use rate	DKC environment	MODERATE	Yes	Provisioning
62dxxx	Exceeded Fixed outage Threshold of DP pool use rate	DKC environment	MODERATE	Yes	Provisioning
62exxx	Exceeded DP pool depletion threshold for TI pairs	DKC environment	MODERATE	Yes	Provisioning
631 <i>xxx</i>	Auto pool expansion failed due to system error	DKC environment	MODERATE	Yes	Provisioning
634 <i>xxx</i>	Auto pool expansion failed due to no more LDEV IDs	DKC environment	MODERATE	Yes	Provisioning
641 <i>xxx</i>	Tier relocation is not completed	DKC environment	SERVICE	Yes	Provisioning
660100	No free encryption key	DKC environment	MODERATE	Yes	Encryption License Key
660200	Remaining free encryption key warning	DKC environment	SERVICE	Yes	Encryption License Key
670000	Warning for depletion of cache management devices	Cache	MODERATE	Yes	Thin Image
681 <i>xxx</i>	Operation error of deduplication system data volume automatic deletion was detected.	DKC environment	MODERATE	Yes	Provisioning
682000	Deduplication system data volume automatic deletion was suspended.	DKC environment	MODERATE	Yes	Provisioning
7c1 <i>xxx</i> ¹	Error in server registered by using HSAE	DKC environment	MODERATE	Yes	CCI

Reference code	Failure		Alert level (Severity)	Host report	Reference document
7d030 <i>x</i> ²	GUM AuditLog lost	DKC environment	MODERATE	Yes	Audit Log
7d040 <i>x</i> ²	GUM AuditLog Warning Threshold was exceeded	DKC environment	MODERATE	Yes	Audit Log

Legend:

- **Yes:** This SIM performs the host report.
- **No:** This SIM does not perform the host report.
- x: A hexadecimal number from 0 to f.
- Audit Log: SIM Codes in the Hitachi Audit Log User Guide
- Encryption License Key: Troubleshooting in the Encryption License Key User Guide
- Provisioning: Troubleshooting for provisioning in the *Provisioning Guide*.
- Thin Image: Troubleshooting Thin Image in the *Hitachi Thin Image User Guide*.
- CCI: Troubleshooting in the *Command Control Interface User and Reference Guide*.
- **1.** xxx indicates the server ID of Storage Advisor Embedded.
- **2.** x = 1: An error occurred in CTL1.
 - x = 2: An error occurred in CTL2.

SIM code list for troubleshooting by service personnel

The following table lists and describes the SIM codes that require action or restoration by service personnel. If a SIM in the table is output, contact customer support.

If you select Host Report for Notification Alert in the **Set Up Alert Notifications** window, alert notification for SIMs which are reported to the host is sent. If you select All, alert notification of all SIMs are sent.

Reference code	Description	Section	Alert level (Severity)	Host report
180000	Audit Log lost	DKC environment	MODERATE	Yes
1C0000	Detected a specific error code SSB	DKC environment	SERVICE	Yes

Reference code	Description	Section	Alert level (Severity)	Host report
2120xx	Channel port blocking	DKC environment	MODERATE	Yes
2130xx	CHB blocking	DKC environment	MODERATE	Yes
2140xx	DKB blocking	DKC environment	MODERATE	Yes
2153xx	PECB blocking	DKC environment	MODERATE	Yes
2154xx	SWPK blocking	DKC environment	MODERATE	Yes
2157xx	PECB warning	DKC environment	MODERATE	Yes
2180xx	RIO path closed	DKC environment	MODERATE	Yes

code	Description	Section	(Severity)	report

Legend:

- **Yes:** This SIM performs the host report.
- **No:** This SIM does not perform the host report.
- x: A hexadecimal number from 0 to f.

Notes:

- **1.** *xxx*: Indicates the drive location. For the correspondence of CDEV number, RDEV number, and the disk drive number, see <u>Obtaining drive box and drive numbers</u> (on page 32).
- **2.** xx = 01: An error was detected while dedupe and compression is being performed.
 - xx = 02: An error was detected while capacity saving-enabled DP-VOLs were being deleted without blocking or formatting processing.
- **3.** "Recovered from ENC temporary failure successfully" (cf14xx) indicates that "SAS PORT BLOCK" (cf12xx) occurred due to a temporary failure of ENC at the location indicated by the SAS-PORT number (xx) was recovered automatically. Therefore, no action by service personnel is required. However, if the SAS-PORT number indicated by SAS PORT BLOCK (cf12xx) is different from the one in cf14xx, action must be taken by service personnel.
- **4.** These SIMs might be handled by users. For details, see the Hitachi Volume Migration User Guide.

Obtaining drive box and drive numbers

For certain SIM reference codes, the last three digits of a reference code (in hexadecimal) can be converted to the number of the drive box and drive where the error occurred.

Procedure

- **1.** Convert the last three digits of a reference code from hexadecimal to decimal. For example, A9E in hexadecimal is 2,718 in decimal.
- **2.** Divide the the number in step 1 by 64. The quotient is the drive box number and the remainder is the drive number.
 - For example, 2,718 / 64 = 42 with a remainder of 30. Therefore, The drive box number is 42 and the drive number is 30.

Examples

The following table provides examples of trap reference codes and their corresponding drive box and drive numbers.

Hexadecima	Decimal	Decimal	value / 64	Drive box	Drive
I trap value	value	Quotient	Remainder	number	number
A9E	2,718	42	30	DB-42	HDD42-30
436	1,078	16	54	DB-16	HDD16-54
BFB	3,067	47	59	DB-47	HDD47-59
